

**FOR IMMEDIATE RELEASE****#42-16****COOLING CENTERS WILL REMAIN OPEN TUESDAY, AUGUST 16 AS HOT WEATHER CONTINUES IN NYC**

*To find the nearest cooling center location and hours of operation, call 311 or visit [www.nyc.gov/beattheheat](http://www.nyc.gov/beattheheat)*

*Strong thunderstorms are possible Tuesday with the potential for heavy rain and strong winds*

**August 15, 2016** — With heat index values continuing to rise into the 90s through Tuesday, marking close to a week of above average temperatures, New York City cooling centers will remain open Tuesday, August 16. New Yorkers are advised to call 311 (TTY: 212-504-4115) or visit NYC Emergency Management's Cooling Center Finder at [www.nyc.gov/beattheheat](http://www.nyc.gov/beattheheat) to find the nearest cooling center locations – including accessible facilities – and hours of operation. Cooling centers are air-conditioned facilities, such as libraries, community centers, senior centers and NYCHA facilities that are open to the public during heat emergencies.

“Even though the worst of the heat wave is over, we are still experiencing extreme temperatures that can be dangerous, especially to vulnerable populations,” said **New York City Emergency Management Commissioner Joseph Esposito**. “Make sure you use air conditioning or get to a cooling center, drink lots of water and avoid strenuous activity.”

The National Weather Service has issued a Heat Advisory in effect from noon through 10:00 PM Tuesday. A Heat Advisory is currently in effect through 8:00 PM tonight. Extreme heat events in New York City are defined as a heat index (which accounts for both temperature and humidity) reaching 95 degrees or more for two or more consecutive days or 100 or more for one or more days. The risk to public health increases as the heat index and the number of consecutive days of extreme heat increase.

The New York City Emergency Management Department also alerts New Yorkers of the potential for severe weather Tuesday. According to forecasts, heavy rain and strong winds may impact the NYC area during the morning and evening commutes. A total of 0.25 to 0.50 inches of rain is expected, but locally higher amounts are possible. Localized minor urban flooding may occur in low-lying and poor drainage areas, and flash flooding could occur during the periods of heaviest rain.

**HELPING NEW YORKERS TO BEAT THE HEAT:**

- The Department of Homeless Services has issued a Code Red Alert and has enhanced outreach. Single adults can present to any shelter to seek refuge from the heat. Transportation is also available to cooling centers via DHS outreach teams, which are checking on vulnerable, at-risk clients with greater frequency.

- The Fire Department has hydrant spray caps available for any adult 18 years or older at a fire house upon request.
- The Department for the Aging has opened senior centers as cooling centers, and home care agencies are on the lookout for clients who may need assistance. Case management agencies are also calling to check on home-bound seniors.
- NYC Water-on-the-Go fountains are available across all five boroughs. Schedules can be found [here](#).
- An Excavation Safety Alert has been issued through Tuesday, August 16, at 7:00 PM. Contractors are strongly encouraged to implement enhanced protective measures before digging.

NYC Emergency Management continues to monitor the weather and encourages New Yorkers to take the following steps to beat the heat throughout the summer months:

**CHECK ON THOSE PARTICULARLY VULNERABLE TO THE HEAT:**

- A small but crucial gesture can help ensure that we all have a safe and healthy summer: Get to know your neighbors, and contact neighbors and relatives – in person or by phone – at least twice a day during heat waves.
- Pay special attention to the elderly, the very young and anyone with a pre-existing medical condition. New Yorkers should check in on older neighbors who may be isolated from friends and family.
- Air conditioning is the best way to keep cool when it is hot outside, but some people do not have an air conditioner or do not turn it on when they need it. Encourage them to use air conditioning. Help them get to an air-conditioned place if they cannot stay cool at home. Make sure they are drinking enough water.

**ADDITIONAL HEALTH AND SAFETY TIPS FOR PROTECTION AGAINST THE HEAT:**

- Stay out of the sun and avoid extreme temperature changes.
- Wear lightweight, light-colored clothing.
- Drink fluids, particularly water, even if you do not feel thirsty. Your body needs water to keep cool. Those on fluid-restricted diets or taking diuretics should first consult their physician.
- Water is the safest liquid to drink during heat emergencies. Avoid beverages containing alcohol and/or caffeine.
- Eat small, frequent meals.
- Avoid strenuous activity, especially during the sun's peak hours: 11:00 AM to 4:00 PM. If you must do strenuous activity, do it during the coolest part of the day, which is usually in the morning between 4:00 AM and 7:00 AM.
- If possible, go to an air-conditioned building for several hours during the hottest parts of the day.
- Cool down with a cool bath or shower.

- Participate in activities that will keep you cool, such as going to the movies, shopping at a mall, or swimming at a pool or beach.
- Cover all exposed skin with an SPF sunscreen (15 or above) and wear a wide-brimmed hat to protect your face and head.
- Never leave your children or pets in the car.

Know the warning signs of heat stress. If you or someone you know feels weak or faint, go to a cool place and drink water. If there is no improvement, call a doctor or 911.

Call 911 immediately if you have, or someone you know has:

- Hot dry skin OR cold clammy skin
- Trouble breathing
- Rapid heartbeat
- Confusion, disorientation, or dizziness
- Nausea and vomiting

#### **KEEPING YOUR PETS SAFE**

- **Avoid dehydration:** Pets can dehydrate quickly, so give them plenty of fresh, clean water.
- **Exercise early and late:** When the temperature is very high, don't let your dog linger on hot asphalt. Your pet's body can heat up quickly, and sensitive paw pads can burn.
- **Know when your pet is in danger:** Symptoms of overheating in pets include excessive panting or difficulty breathing, increased heart and respiratory rate, drooling, mild weakness, stupor, or even collapse. Animals with flat faces like Pugs and Persian cats are more susceptible to heat stroke since they cannot pant as effectively. They should be kept cool in air-conditioned rooms as much as possible.
- **Never leave a pet inside of a parked car on a hot day.** Even with the windows open, extreme temperatures inside a parked car could quickly lead to fatal heat stroke for your pet.
- **Keep cats safe by installing screens in your windows.** Unscreened windows pose a real danger to cats, as they may fall out of open windows during summer months.
- **Prepare with your pet:** Pet food, water, medications and supplies should always be included in your emergency preparedness plans and "go bags."
