**WWTP Water Quality Sampling Monitoring Semiannual Report
(January 1 – June 30, 2020)**

September 2020

*Prepared in accordance with Section 6.2 of the NYSDOH
2017 Filtration Avoidance Determination*

Prepared by: DEP, Bureau of Water Supply

Introduction

The attached computer output was prepared in accordance with DEP's 2017 Long-term Watershed Protection Program and NYSDOH's 2017 Filtration Avoidance Determination. It reports the results of DEP's monitoring of all New York City-owned wastewater treatment plants (WWTPs) and all non-City-owned WWTPs discharging in the Catskill and Delaware (CAT/DEL) watersheds from January 1, 2020 through June 30, 2020. WWTPs discharging in the Croton Falls basin, located East of the Hudson River, are also included in this report. The Croton Falls pump station is considered part of the FAD watershed when in operation, and the pump station was operating for part of January and February of 2020. The Cross River pump station was not in operation during this period.

The City's WWTP Compliance and Inspection Program is described in Section 2.5.2 of the *New York City Department of Environmental Protection Long-Term Watershed Protection Plan* (December 2016).

The computer output is divided into four tables. The first table, a subset of the second table, lists all of the DEP samples that contravened State Pollutant Discharge Elimination System (SPDES) limits. The second table shows the results by sample date comparing effluent concentrations in DEP's samples with the limits for the corresponding parameters in the SPDES permits that are currently on file with DEP. The third table is a listing of the raw data for all samples collected in this half year period. The fourth table contains the data qualifiers. Note that DEP's samples are surveillance, not regulatory samples, and single samples that exceed limits may not constitute a true SPDES violation.

The third table of this report is simply an output of the raw data and, as such, includes coding conventions where applicable. Parameters not detected in the effluent are indicated with a “<” sign and the reporting level. For example, settleable solids <0.1 mgL⁻¹ means that the settleable solids concentration in the effluent was less than the reporting level of 0.10 mgL⁻¹. Errors occurring in the field or in the lab are noted by “Error”. Fcoli code E means estimated. This report mainly tabulates effluent data; however, influent data are included and marked with an “**” in Table 3 for the five plants that require percent removal calculations (Grand Gorge, Pine Hill, Tannersville, Grahamsville, and Margaretville).

As an added note, during this six-month period the Croton Falls Pump Station was in operation from January 1 to January 22 and February 3 to February 9. The Cross River Pump Station was not used during this time period.

During this sampling period, January-June 2020, monthly sampling was discontinued at non-DEP WWTPs from March through June as part of the DEP's CoVID Reduced Monitoring Plan.
