RE: Monthly Water Quality Report for September 2018

Dear Ms. Huang, Mr. Palmer and Ms. Lynch:

Enclosed, please find the New York City Water Quality report for the month of **September 2018**. There was no well pumpage to distribution in the Groundwater System this month. Croton water fed into distribution from September 26 through September 30, 2018. In addition to the following list of compliance reports, a disc of electronic files containing compliance and non-compliance data for this month is enclosed with this report.

- Raw Water Fecal Coliform Report
- Raw Water Turbidity Report
- Distribution Microbiological Compliance Reports
 - Summary
 - Positive Samples
 - Resamples
- Chlorine Residual Reports
 - Entry Point Online
 - Entry Point Daily Minimum
 - Heterotrophic Plate Count
 - Monthly Summary
- Distribution Turbidity Reports
 - Distribution Turbidity Report
 - Source Water > 1.49 NTU Table

- Color Entry Point Report
- Fluoride Reports
 - Fluoride Entry Point Report
 - Distribution Fluoride Report
- Quarterly Disinfection By-products Report

The reports are summarized as follows:

FAD REQUIREMENTS

1. Raw Water Fecal Coliform Concentrations (Section 141.71(a)(1)):

Requirements met. The Delaware Aqueduct effluent from Kensico Reservoir exhibited fecal coliform concentrations in water prior to disinfection at levels less than or equal to 20 CFU/100 mL in at least 90% of the samples collected in the six-month period from April 1, 2018 to September 30, 2018. The six month running percentage of samples collected with fecal coliform concentrations >20 CFU/100 mL was 1.09% for the Catskill/Delaware System for this time period.

2. Raw Water Turbidity (Section 141.71(a)(2)):

Requirements met. The raw water leaving Kensico Reservoir via the Delaware Aqueduct in compliance samples collected at DEL18DT, just prior to disinfection, exhibited turbidity levels less than or equal to 5 NTU on an ongoing basis during the month. Turbidity values did not exceed 0.85 NTU on the Catskill/Delaware System for the month.

3. Entry Point Chlorine Residual (Section 141.71(b)(1)(iii) and 141.72(a)(3)):

Requirements met. As required, continuous monitoring for free chlorine residual was maintained at the distribution entry points throughout the month and at no time did the concentration fall below 0.2 mg/L for more than four hours. The minimum daily free chlorine residual value for entry point readings for the Catskill/Delaware System from sites 1S03 (Tunnel 1) was 0.51 mg/L, 1S03A (Tunnel 2) was 0.83 mg/L, and 1S03B (Tunnel 3) was 0.58 mg/L for the Catskill/Delaware System.

The Croton Filtration Plant was online and continuously feeding the Croton Low Service entry point from from September 26 at 2:01 PM to September 30, 2018. The Croton High Service entry point was offline in September 2018. When High Service Pumps are off, distribution Tunnel 3 water intermittently back feeds through the High Service tunnel to the Low Service entry point to meet the distribution demands. The minimum daily free chlorine residual value for Croton entry point readings from site 1SCL1 (Low Service) was 0.52 mg/L.

4. Distribution System Disinfection Residuals (Section 141.71(b)(1)(iv) and 141.72(a)(4)):

Requirements met. All free chlorine residuals measured at compliance sites within the distribution system during the month were greater than or equal to 0.02 mg/L except for one sample that equaled 0.0 mg/L.

A total of 1303 distribution samples were tested for free chlorine residual this month. For all distribution sites free chlorine residual ranged from 0.00 mg/L to 1.16 mg/L and averaged 0.57

mg/L for the month.

5. Trihalomethane Monitoring / HAA5 Monitoring (Section 141.71(b)(6)):

Requirements met. The results for the third quarter of 2018 were included in the report dated September 10, 2018 (For the August 2018 reporting period).

6. Total Coliform Monitoring (Section 141.71(b)(5)):

Requirements met. The results of monthly coliform monitoring performed in the distribution system are enclosed. A total of 801 compliance samples were tested for total coliform during this period. HPC were all ≤ 500 CFU/mL, equivalent to a measurable free chlorine residual. Zero percent of the samples had an undetectable free chlorine residual or HPC > 500 CFU/mL. This meets the requirements that a free chlorine residual be maintained at representative points in the distribution system, and that no more than 5% of the free chlorine residual samples be undetectable in any two months. During the month, there were two (2) samples that tested positive for total coliform, and all samples were negative for *E. coli* during the month.

- A sample collected from Site 25450 (sample station in front of 1030 South Side of Park Place, and second sampling station east of W Brooklyn Ave, 12 inch main) on 9/18/2018 was positive for total coliform. Repeat sampling on 9/20/2018 was coliform negative at all locations.
- A sample collected from Site 13550 (sample station in front of 2015 west side of University Avenue, and first sampling station south of W 180th Street, 12 inch main) on 9/27/2018 was positive for total coliform. Repeat sampling on 9/29/2018 was coliform negative at all locations.

OTHER WATER QUALITY MONITORING

7. Microbiological Monitoring:

Coliform monitoring at distribution sites near first service connections, in response to source water having a turbidity > 1.49 NTU, was not required this month, but all samples were negative for total coliform.

The analyses of 502 distribution Operational samples resulted in four (4) samples testing positive for total coliform. No *E. coli* were detected.

The analyses of 241 Pre-Finished samples resulted in five (5) samples testing positive for total coliform. No *E. coli* were detected.

The analyses of 600 Autosampler Pre-finished samples resulted in ten (10) samples testing positive for total coliform. No *E. coli* were detected.

8. Distribution Turbidity Monitoring:

For distribution sites turbidity ranged from < 0.10 to 1.20 NTU and averaged 0.64 NTU for the month. This meets the MCL of 5 NTU for the monthly average of all distribution samples.

9. Color Monitoring:

The MCL of 15 units for color was met at each Catskill/Delaware and Croton entry point for the

month. Daily analyses of entry point samples (94 samples in total), produced monthly average color values of six (6) units for sites 1S03 (Tunnel 1), 1S03A (Tunnel 2), and 1S03B (Tunnel 3), and four (4) units for site 1SCL1 (Croton Low Service).

10. Volatile Organic/TTHM/HAA5 Monitoring:

Monthly Results: Twenty-two (22) distribution site samples were collected for volatile organic contaminant (VOC) analysis and three (3) entry point samples. All VOC samples from distribution sites and entry points were below detection. Twenty-two (22) TTHM distribution samples were collected ranging from 27 µg/L to 54 µg/L. Three (3) TTHM entry point samples were collected ranging from 21 µg/L to 55 µg/L. Twenty-two (22) HAA5 distribution samples were collected ranging from 19 µg/L to 47 µg/L. Three (3) HAA5 entry point samples were collected ranging from 29 µg/L to 34 µg/L.

11. Semivolatile and Other Organic Chemicals/parameters:

EPA Method 525.3 monitoring for 112 compounds of specified and unspecified organic parameters was conducted on September 10, 2018 at the three Catskill/Delaware entry points (1S07, 1S03A, and 1S03B), at the Croton Low Service and High Service entry points (1SCL1 and 1SCH3) which represented distribution Catskill/Delaware water at the time of sampling, and six (6) distribution points. All semi-volatile organic contaminant samples from distribution sites and entry points were below detection limits.

Per request from DWQO, an investigation was conducted by the contract laboratory Eurofins Eaton Analytical (EEA) into the previously submitted unusual results that were obtained by EEA for samples collected on May 21, 2018 as part of our Annual monitoring for EPA Method 525.2 (Semivolatiles). Detections were reported for hexachlorocyclopentadiene at 0.064 µg/L at site 1S03A and diethylphthalate at 7.5 µg/L at site 1S03B. The detection for hexachlorocyclopentadiene at 0.064 µg/L is below the NYS required reporting limit of 0.1 µg/L. The detection for diethylphthalate at 7.5 µg/L was unusual due to the fact that analytical results obtained by the Distribution Laboratory by EPA 525.3 and EPA 525.2 have historically always been non-detect. As such, resampling was conducted along with split sampling by DWQO for entry point sites 1S03A and 1S03B on August 20, 2018 and results from the resampling and split sampling event were non-detect by both EEA and DWQO for diethylphthalate . Due to EEA's inability to provide reproducible results, they have acknowledged the possibility of contamination being the cause of the detection of diethylphthalate in entry point site 1S03B that was sampled on May 21, 2018 and also acknowledged that the validity of the analytical result of 7.5 µg/L is questionable.

12. Fluoride Monitoring:

Daily analyses of entry point samples (171 samples in total), produced monthly average fluoride levels of 0.72 mg/L for sites 1S03 (Tunnel 1), 1S03A (Tunnel 2), and 1S03B (Tunnel 3); and 0.69 for site 1SCL1 (Croton Low Service). The fluoride levels at the entry points did not exceed the MCL of 2.2 mg/L at any time during the month.

13. Unregulated Contaminant Monitoring Rule:

Resampling for second quarter monitoring of the fourth Unregulated Contaminant Monitoring Rule (UCMR4), originally sampled on August 7, 2018 and results submitted last month, was conducted on two occasions: 1) on August 21, 2018 at one (1) source water and one (1) entry point site because the original samples were invalidated due to delays in transit; and 2) on August 23, 2018 at two (2) entry points because of QC failures for EPA Method 525.3. Samples from August 21, 2018 were tested for bromide (result of 7.9 µg/L), TOC (result of 2.1 mg/L), germanium (ND), managanese (result of 20 µg/L), Method 530 (ND), Method 541 (ND) and Method 525.3 (ND). Method 525.3 samples results from August 23, 2018 were all below detection. Sampling results for bi-monthly cyanotoxins monitoring at the four (4) entry points conducted on August 29, 2018 corresponding to sampling event six under UCMR4, were below detection. Contract laboratory reports of available data are included as pdf files on the disc of electronic files enclosed with this report.

Please feel free to contact me at (845) 340-7701 if you would like to discuss any of this information in greater detail.

Sincerely,

A handwritten signature in black ink that reads "Steven C. Schindler" followed by "for SS".

..: Aqueduct Shutdown, CONF: Confluent Growth (+ indicates positive coliform growth), LE: Lab Error, FE: Field Error,
E: estimated count based on non-ideal plate, >=: plate count may be biased low based on heavy growth, >: observed count replaced with
dilution based value

1. Does a raw water turbidity M & R violation exist? Yes X No
2. Does the turbidity reading exceed 5 NTU at any time? Yes X No
If yes, check for MCL violation, and notify state by the end of the next business day.
3. Minimum number of microbiological samples required per week: 5
4. A daily microbiological sample is required every day the raw water turbidity exceeds 1 NTU.

Data logger daily minimum value is obtained from the minimum value of all the valid every one minute values collected in one day.

Legend: MinCl_1DL: Shaft 3's minimum chlorine level measured at the shaft and recorded at the location via data logger, in ppm.

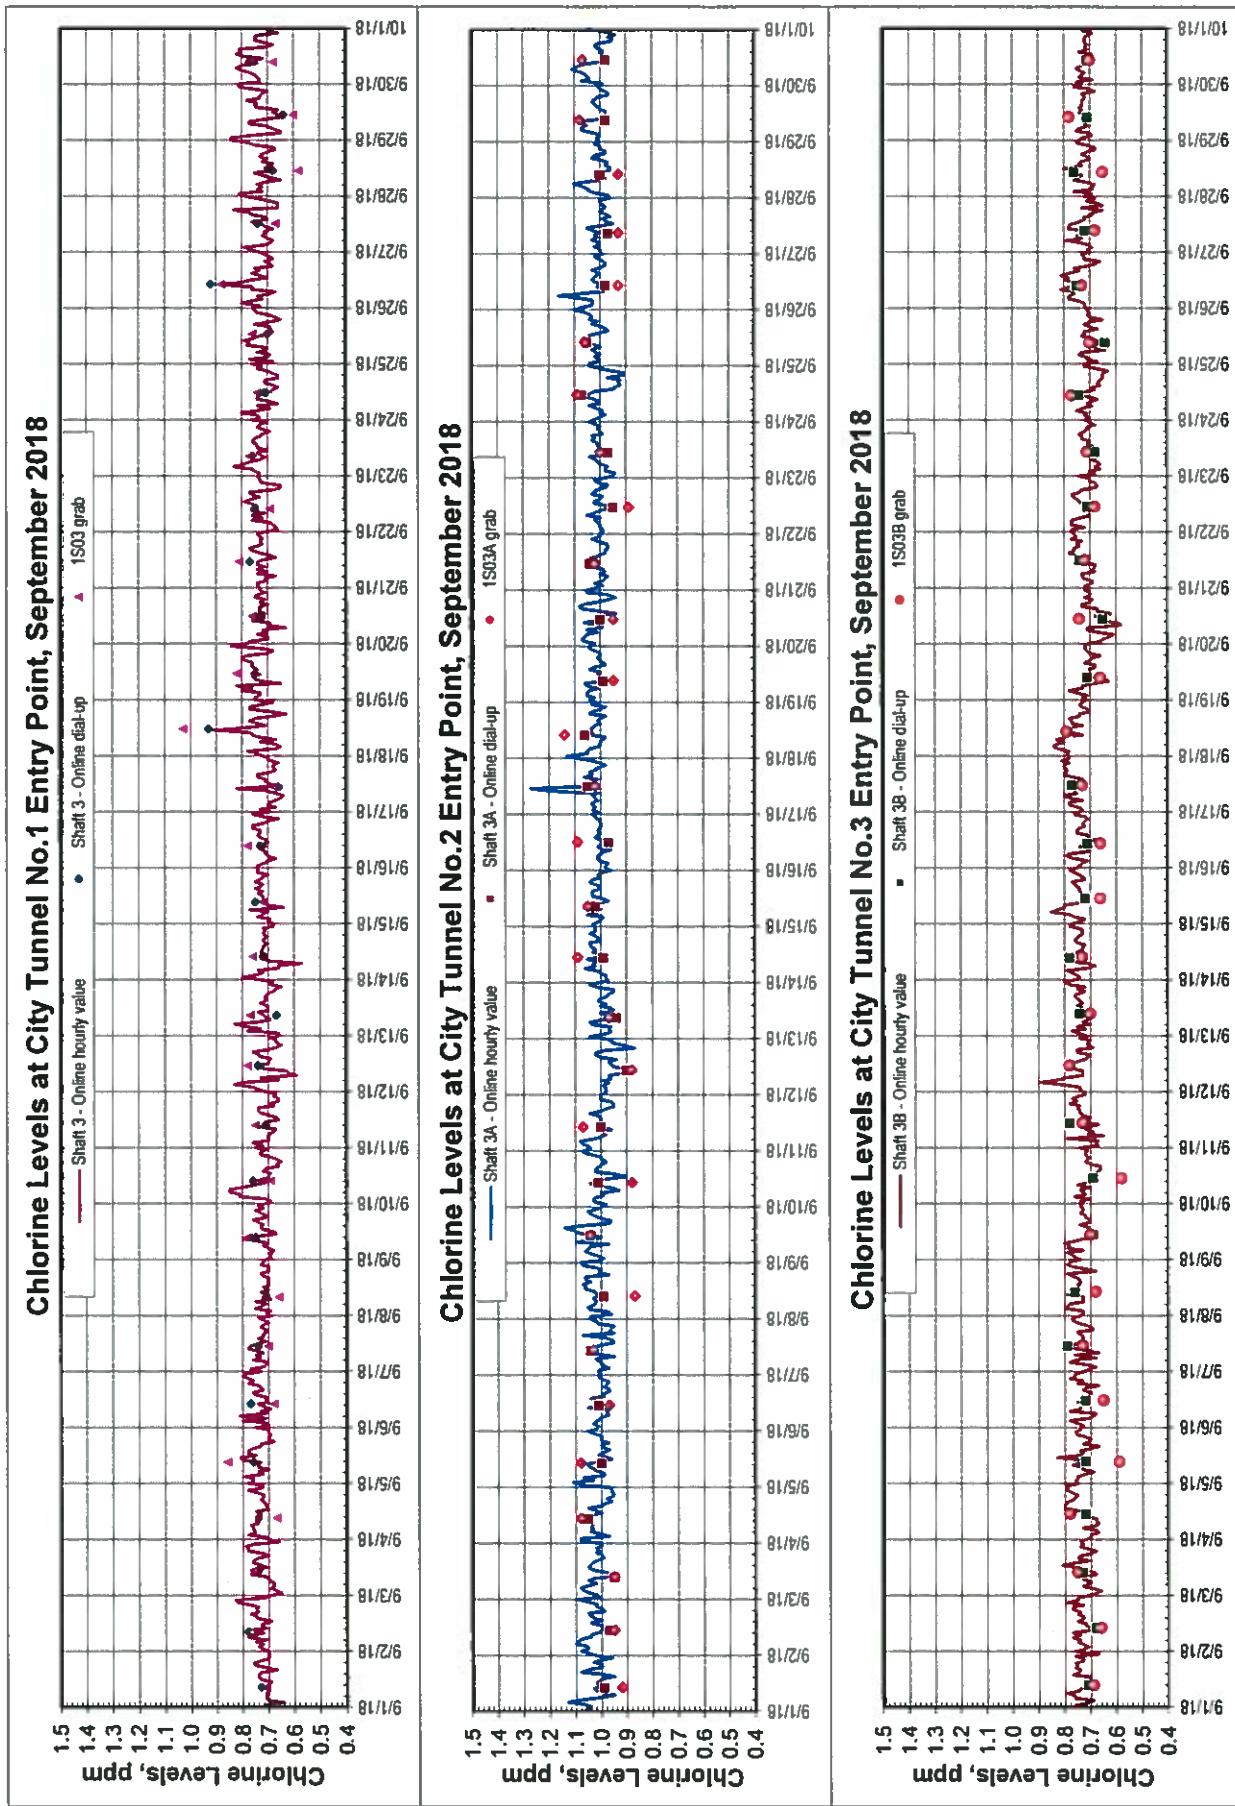

MinCl_2DL: Shaft 3A's minimum chlorine level measured at the shaft and recorded at the location via data logger, in ppm.

MinCl_3DL: Shaft 3B's minimum chlorine level measured at the shaft and recorded at the location via data logger, in ppm.
