**WWTP Water Quality Sampling Monitoring Semiannual Report  
(July 1 – December 31, 2018)**

**March 2019**

*Prepared in accordance with Section 6.2 of the NYSDOH  
2017 Filtration Avoidance Determination*

Prepared by: DEP, Bureau of Water Supply

## **Introduction**

The attached computer output was prepared in accordance with DEP's 2017 Long-term Watershed Protection Program and NYSDOH's 2017 Filtration Avoidance Determination. It reports the results of DEP's monitoring of all New York City-owned wastewater treatment plants (WWTPs) and all non-City-owned WWTPs discharging in the Catskill and Delaware (CAT/DEL) watersheds from July 1, 2018 through December 31, 2018.

The City's WWTP Compliance and Inspection Program is described in Section 2.5.2 of the *New York City Department of Environmental Protection Long-Term Watershed Protection Plan* (December 2016).

The computer output is divided into four tables. The first table, a subset of the second table, lists all of the DEP samples that contravened State Pollutant Discharge Elimination System (SPDES) limits. The second table shows the results by sample date of a comparison between effluent concentrations in DEP's samples with the limits for the corresponding parameters in the SPDES permits that are currently on file with DEP. The third table is a listing of the raw data for all samples collected in this half year period. The fourth table has the data qualifiers. Note that DEP's samples are surveillance, not regulatory samples, and single samples that exceed limits may not constitute a true SPDES violation.

The third table of this report is simply an output of the raw data and, as such, includes coding conventions where applicable. Parameters not detected in the effluent are indicated with a “<” sign and the detection limit. For example, <0.20 in the NH<sub>3</sub> column means that the total ammonia concentration in the effluent was less than the detection limit of 0.20 mgL<sup>-1</sup>. Errors occurring in the field or in the lab are noted by “Error”. Fcoli code E means estimated.

This report mainly tabulates effluent data; however, influent data are included and marked with a “\*” in Table 3 for the five plants that require percent removal calculations (Grand Gorge, Pine Hill, Tannersville, Grahamsville, and Margaretville).
