Adopted by the Superintendents of Buildings for The City of New York, and published in accordance with the provisions of Section 141 of the Building Code, and Section 409 of the Greater New York Charter as amended.

Once in each year, every employing or master plumber carrying on his trade, business or calling in THE CITY OF NEW YORK shall register his name and address at the office of The Bureau of Buildings in the Borough in which his place of business is located, under such rules and regulations as said Bureau shall prescribe, in accordance with Section 141 of the Building Code of THE CITY OF NEW YORK.

A plumber proposing to do work in a borough other than that in which he is registered shall present his certificate at the office of the Bureau of Buildings in that borough before commencing work, so that the fact of his having been properly registered may be recorded.

(I)

FILING OF DRAWINGS, DESCRIPTIONS, ETC.

1—Drawings and triplicate descriptions, on forms furnished by the Bureau of Buildings for all Plumbing and Drainage shall be properly filled in, and filed by the owner or Architect in the said Bureau. The plans must be drawn to scale in ink, on cloth, or they must be cloth prints of such scale drawings, and shall consist of such floor plans and sections as may be necessary to show clearly all plumbing work to be done, and must show partitions and methods of ventilating water-closet apartments.

2—The said plumbing and drainage shall not be commenced or proceeded with until said drawings and descriptions shall have been so filed and approved by the Superintendent of Buildings.

3—No modification of the approved drawings and descriptions will be permitted unless either amended drawings and triplicate descriptions, or an amendment to the original drawings and descriptions, covering the proposed change or changes, are so filed and approved by the Superintendent of Buildings.

4—The drainage and plumbing of all buildings, both public and private, shall be executed in accordance with the rules and regulations of the Bureau of Buildings.

5—Repairs or alterations of plumbing or drainage may be made without filing drawings and descriptions in the Bureau of Buildings, but such repairs or alterations shall not be construed to include cases where new vertical lines or horizontal branches of soil, waste, vent or leader pipes are proposed to be used.

Affidavit must give the name and address of owner and plumber, etc. No registered plumber shall sign the specifications and act as the agent for a plumber who has not obtained a certificate of competency from the Examining Board of Plumbers as an Employing or Master Plumber. A violation of this rule will be deemed a sufficient reason by the Superintendent of Buildings for the cancellation of a Certificate of Registration, in accordance with Chapter 803, Laws of 1896.

10—One set of specifications will be received for not more than ten houses, and then only when on adjoining lots and houses are exactly alike.

45—Cesspools and privy-vaults will be permitted only after it has been shown to the satisfaction of the Supt. of Buildings that their use is absolutely necessary.

46—When allowed, they must be constructed strictly in accordance with the terms of the permit issued by the Supt. of Buildings.

47—Cesspools must not be used as privy vaults nor can privy vaults be used as cesspools. Cesspools and privy vaults must be located at least 15 feet from any building and on the same lot as the building for which their use is intended. 49—All pipe-lines must be supported at the base on brick piers, or by heavy iron hangers from the cellar-ceiling beams, and along the line by heavy iron hangers at intervals of not more than ten feet.

50—All pipes issuing from extension or elsewhere, which would otherwise open within 20 feet of the window of any building, must be extended above the top of any window located within such distance. When a building exceeds in height that of an adjoining building, and windows or openings are cut in the wall on the lot line within 20 feet of the roof terminal of any soil, waste or vent line now in place or subsequently installed in the lower building, the owner of the higher building shall defray the expense of extending said soil, waste or vent lines above the roof of the higher building or shall himself make such alteration.

51—The arrangement of all pipes must be as straight and direct as possible. Offsets will be permitted only when unavoidable.

52—All pipes and traps should, where possible, be exposed to view. They should always be readily accessible for inspection and repairing.

53—In every building where there is a leader connected to the drain, if there are any plumbing fixtures, there must be at least one four (4) inch pipe extending above the roof for ventilation.

54—All yards, areas and courts exceeding 15 square feet in area must be drained into the sewer. A shaft open at the top not exceeding 25 square feet in area, and which cannot be connected in back of a leader, yard, court or area drain trap, may be drained into a publicly placed, water supplied, properly trapped and vented sloop sink.

55—These drains, when sewer-connected, must have connections not less than three inches in diameter. They should be controlled by one trap—the leader trap, if possible.

56—Floor drains will only be permitted when it can be shown to the satisfaction of the Superintendent of Buildings that their use is absolutely necessary and arrangements made to maintain a permanent water seal in the traps.

57—Cellar drains may be connected in back of and controlled by a leader, yard, court or area drain trap which need not be vented.

58—Subsoil drains should discharge into a sump or receiving tank, the contents of which if discharged by gravity may be discharged into a rain leader, yard, court or area drain behind the trap controlling same or may be discharged through a properly trapped and vented, water supplied receptacle. Where mechanical force is required to discharge the contents into the plumbing and drainage system a proper automatic cut off or check valve must be provided on the connection between house-drain and apparatus used for raising the contents of sump-pit.

59—The contents of settling chamber or dust receptacles for vacuum cleaners may be discharged into a Plumbing and Drainage system, the same as sub-soil drain sump-pits.

60—Every building shall be kept provided with proper metallic gutters and rain leaders for conducting water from all roofs in such manner as shall protect the walls and foundations from injury. In no case shall the water from any rain leader be allowed to flow upon the sidewalk or adjoining property, but the same shall be conducted by proper pipes to the sewer. If there be no sewer in the street upon which the building fronts, then the water from said leaders may be conducted by proper pipes laid below the surface of sidewalk to the street gutter, or may be conducted by extra heavy cast iron pipe to a leaching cesspool located at least 20 feet from any building. No plumbing fixtures shall discharge into a leaching cesspool.

61—Inside leaders must be made of cast-iron, wrought iron or steel, with roof connections made gas and water tight by means of a heavy lead or copper-drawn tubing wiped to a brass ferrule or nipple calked or screwed into the pipe.

62—Outside leaders may be made of steel metal, but they must connect with the house drain by means of a cast-iron pipe extending vertically five feet above the grade level.

63—Leaders must be trapped with cast-iron running traps so placed as to prevent freezing.

64—Rain-water leaders must not be used as soil, waste or vent pipes nor shall any such pipe be used as a leader.

VII.

THE HOUSE SEWER, HOUSE DRAIN, HOUSE TRAP AND FRESH AIR INLET.

65—Old house sewers can be used in connection with the new buildings or new plumbing only when they are found, on examination by the plumbing inspector, to conform in all respects to the requirements governing new sewers.

66—When a proper foundation consisting of a natural bed of earth, rock, etc., can be obtained, the house sewer can be of earthenware pipe.

67—Where the ground is made or filled in, or where the pipes are less than three feet deep, or in any case where there is danger of settlement by frost or from any cause, and when cesspools are used, the house sewer must be of extra heavy cast-iron pipe, with lead caulked joints.

68—No earthenware house-drain when found in a leaky or defective condition, shall be repaired or replaced except with heavy cast-iron pipe.

69—The house drain and its branches must be of extra heavy cast-iron when underground, and of extra heavy cast-iron or galvanized wrought iron or steel when above ground.

70—The house drain must properly connect with the house sewer at a point two feet outside of the outer front vault or area wall of the building. An arched or other proper opening must be provided for the drain in the wall to prevent damage by settlement.

71—The house drain if above the cellar floor must be supported at intervals of ten feet by eight-inch brick piers or suspended from the floor beams, or be otherwise properly supported by proper hangers placed not more than 10 feet apart.

72—No steam-exhaust, boiler blow off or drip pipe shall be connected with the house drain. Such pipes must first discharge into a proper condensing tank, and from this a proper outlet to the house sewer outside of the building must be provided. In low pressure steam systems the condensing tank may be omitted, but the waste connections must be otherwise as above required.

73—The house-drain and house-sewer must be run as direct as possible, with a fall of at least one-quarter inch per foot, all changes in direction made with proper fittings, and all connections made with Y branches and one-eighth and one-sixteenth bends.

74—The house sewer and house drain must be at least 4 inches in diameter when receiving the discharge of a water-closet. Where rain leaders are connected to the plumbing system, the sizes of house sewer, house drain and leader connections shall be computed according to the square feet of area drained into them. No house-sewer or house-drain shall be of less diameter than the largest line of pipe connected thereon. The following table is the maximum area allowed to drain into pipes of given diameter:

Diameter of Pipe.	Fall ¼ Inch per Foot.	Fall ½ Inch per Foot.
3	1,200 square feet.	1,500 square feet.
4	2,500 square feet.	3,200 square feet.
5	4,500 square feet.	6,000 square feet.
6	8,000 square feet.	10,000 square feet.
7	12,400 square feet.	15,600 square feet.
8	18,000 square feet.	22,500 square feet.
9	25,000 square feet.	31,500 square feet.
10	41,000 square feet.	59,000 square feet.
12	69,000 square feet.	98,000 square feet.

75—Full size Y and T branch fittings for handhole cleanouts must be provided where required on house drain and its branches. No clean-out need be larger than 6 inches in diameter.

76—An iron running trap must be placed in the house drain near the front wall of the house, and on the sewer side of all connections, except a Y fitting used to receive the discharge from an automatic sewage lift, oil separator, or a drip-pipe where one is used. If placed outside of the house or below the cellar floor, it must be made accessible in a brick manhole, the walls of which must be eight inches thick, with an iron or flagstone cover. When outside the house it must never be less than three feet below the surface of the ground.

77—When the plumbing system of any building is altered by the addition of a new soil, waste or vent line, and no house trap and fresh air inlet or leader trap exists on the house drain, same shall be provided.

78—The house trap must have two cleanouts, with brass screw cap ferrules calked in.

79—A fresh-air inlet pipe must be connected with the house-drain just inside of the house trap and extended to the outer air, terminating with a return bend, with open end one foot above the grade at most available point to be determined by the Superintendent of Buildings and shown on plans. The fresh air inlet pipe must be of the same diameter as the house drain. An automatic device approved by the Superintendent of Buildings may be used, when set in a manner satisfactory to him.

80—No curb box or similar device with grating placed in sidewalk will be permitted for fresh air inlets.

VIII. SOIL AND WASTE LINES.

81—All main, soil, waste or vent pipes must be of iron, steel or brass.

82—When they receive the discharge of fixtures on any floor above the first they must be extended in full calibre at least one foot above the roof coping, and well away from all shafts, windows, chimneys or other ventilating openings. When less than four inches in diameter, they must be enlarged to four inches at a point not less than one foot below the roof surface by an increaser not less than nine (9) inches long.

83—No caps, cowl or bends shall be affixed to the top of such stack.

84—In all buildings wire baskets must be securely fastened into the opening of each pipe in an accessible position. When roofs are used for drying purpose or roof gardens, all pipes shall be extended to a height of seven feet.

85—Necessary offsets above the highest fixture branch must not be made at an angle of less than 45 degrees to the horizontal.

86—Soil and waste pipes must have proper Y or T. Y. branches for all fixture connections.

WATER SUPPLY FOR FIXTURES.

149—All water-closets and other plumbing fixtures must be provided with a sufficient supply of water for flushing to keep them in a proper and cleanly condition.

Flush tanks must have a capacity of eight gallons for water-closets and five gallons for urinals.

150—House service pipes must be connected to the street mains by means of taps, and a stop cock or valve placed under the sidewalk at the curb, in compliance with the rules and under the supervision of the Department of Water Supply, Gas and Electricity.

151—A separate stop or valve must be placed upon the service pipe inside the front wall.

152—The diameters of street service pipes must not be less than three-quarter inch for dwellings and tenements occupied by six families or less; one inch for tenements or apartment houses occupied by more than six families and one and one-half inch for hotels, factories and other miscellaneous buildings, provided that in no case can the diameter of the service pipes be less than the diameter of the tap installed under the supervision of the Department of Water Supply, Gas and Electricity.

153—That all rising lines have a stop cock or valve at the foot of each line and in all buildings, except dwellings, a separate stop cock or valve must be placed on the branches from riser for each fixture if isolated or each group of fixtures such as bathrooms, kitchens, etc., located to be accessible at all times. The diameters of all rising lines must not be less than $\frac{3}{4}$ inch, but where lead or brass pipe is used the minimum diameter may be $\frac{1}{2}$ inch.

154—Diameters of branches to any fixtures must not be less than $\frac{1}{4}$ inch, except when used to supply water-closet, cisterns or lavatories. When the material used is lead or brass pipe, the minimum diameter may be $\frac{3}{8}$ inch. Branches for flush valves for water closets must not be less than $\frac{1}{4}$ inch in diameter and for urinals not less than $\frac{3}{4}$ inch in diameter.

155—Where a hot water supply system is installed, the distance between the hot and cold water risers should not be less than 6 inches. Where it is impossible to place them 6 inches or more apart, the hot water riser must be covered with an approved insulating material and a method of circulation provided that will insure a prompt delivery of hot water at the faucet when required.

156—All risers and branches must be properly fastened.

157—When the water pressure is not sufficient to supply freely and continuously all fixtures, a house supply tank must be provided of sufficient size to afford an ample supply of water to all fixtures at all times. Such tanks must be supplied from the pressure or by power pumps, as may be necessary; when from the pressure, ball cocks must be provided.

158—House supply tanks must be metal covered so as to exclude dust and so located as to prevent water contamination by gas and odors from plumbing fixtures.

159—House supply-tanks must be of wood or iron or of wood lined with tinned and planished copper.

160—House tanks must be supported on iron beams.

161—The overflow pipe should discharge upon the roof, where possible, and in such cases should be brought down to within six (6) inches of the roof, or it must be trapped and discharged over an open and water-supplied sink not in the same room, not over $3\frac{1}{2}$ feet above the floor. In no case shall the overflow be connected with any part of the plumbing system.

They must be extended through roof for ventilation and continued down to the lowest story of building and so arranged as to discharge into a lime box and diluting sink properly trapped and vented and connected inside of house trap. If the lime box and diluting sink is not used the acid waste must be extended to an earthen house sewer or separately and independently connected to a public or private sewer in street and provided with an accessible running trap located just inside of front wall of building. All branches and joints on lead acid wastes must be made by means of burnt lead joints. If earthenware pipe is used, vertical joints must be made with a mixture of asphaltum and cement. Each length of pipe on vertical runs and on horizontal runs when above the cellar floor must be supported at each hub by proper supports. All floor drains and fixture connections must be trapped and run as direct as possible.

SEWAGE LIFTS.

164—When it is necessary to use a sump system and sewage lift to receive the discharge from the waste or soil connection of fixtures, same shall be arranged to be accessible. If discharged with compressed air it shall be connected to the house drain on the sewer side of all leader or area drain traps and fixture connections or may be connected to house drain on the sewer side of house trap. A separate trap and fresh air inlet must be provided on the inlet side of sump and a 4-inch pipe line continued from drain discharging into sump up to and above roof, for purposes of ventilation. Relief pipes must be provided on sewage receptacles of sumps. Traps of fixtures connected to sump systems must not be vented to vent lines which are used to ventilate traps of fixtures on gravity system. Sump systems should be entirely separate both as to discharge and venting from rest of plumbing system in buildings.

166—They must, if discharged by gravity, be connected by a Y branch fitting to the house drain behind the house trap in such a manner that will not interfere with the house drain and the rest of the plumbing and drainage system. When mechanical force is used to discharge the contents, the connection must be made by a Y branch fitting on the sewer side of house trap.

167—No separate running trap need be provided on the drain entering oil separators, but a separate fresh air inlet and vent line must be provided to keep the system of drainage controlled by the oil separator entirely separate from the rest of plumbing and drainage system.

168—The size of fresh air inlet shall be determined by the size of inlet connection to oil separator, which shall be considered the same as the term house drain for determining the size of all fresh air inlets, which shall conform to the same requirements as regards size and arrangement of terminals for fresh air inlets as called for in regulations.

169—Vent lines shall conform in all respects to vent lines for plumbing fixtures as regards size and arrangement.

170—Relief pipes must be provided at least $1\frac{1}{4}$ inches in diameter. They may be

TESTING THE PLUMBING SYSTEM.

171—The entire plumbing and drainage system within the building must be tested by the plumber, in the presence of a plumbing inspector, under a water test. All pipes must remain uncovered in every part until they have successfully passed the test. The plumber must securely close all openings, as directed by the Inspector of Plumbing. The use of wooden plugs for this purpose is prohibited.

172—The water test will be applied by closing the lower end of the main house-drain and filling the pipes to the highest opening above the roof with water. The water test shall include at one time the house drain and branches, all vertical and horizontal soil, waste and vent and leader lines and all branches therefrom to a point above the surface of the finished floor and beyond the finished face of walls and partitions. If the drain or any part of the system is to be tested separately there must be a head of water at least six (6) feet above all parts of the work so tested, and special provision must be made for including all joints and connections in at least one test.

173—After the completion of the plumbing work in any new or altered building and before the building is occupied, a final smoke test must be applied in the presence of a Plumbing Inspector. Except that for a building not over 6 stories in height a peppermint test may be applied.

174—The material and labor for the tests must be furnished by the plumber. Where the peppermint test is used two ounces of oil of peppermint must be provided for each line up to five stories and cellar in height and an additional ounce of oil of peppermint must be provided for each line when lines are more than five stories in height.

All pipe shall be properly laid and fastened to prevent becoming trapped, and shall be laid, when practicable, above timbers or beams instead of beneath them. Where running lines or branches cross beams they must do so within thirty-six inches of the end of the beams, and in no case shall the said pipes be let into the beams more than two inches in depth. Any pipe laid in a cold or damp place shall be properly dripped, protected and painted with two coats of red lead and boiled oil or tarred.

183—No gas pipe shall be laid in cement or concrete unless the pipe or channel in which it is placed is well covered with tar.

The plugs of all cocks must be ground to a smooth and true surface for their entire length, be free from sandholes, have not less than $\frac{3}{4}$ of an inch bearing (except in cases of special design), have two flat sides on the end for the washer, and have two nuts instead of a tail screw. All stop pins to keys or cocks shall be screwed into place.

195—After all piping is fitted and fastened and all outlets capped up, there must be applied by the plumber, in the presence of an inspector of the Bureau of Buildings, a test with air to a pressure equal to a column mercury 6 inches in height, and the same to stand for five minutes; only mercury gauge shall be used. No piping shall be covered up, nor shall any fixture, gas heater or range be connected thereto until a card showing the approval of this test has been issued by the Superintendent of Buildings.

196—No meter will be set by any gas company until a certificate is filed with them from the Bureau of Buildings certifying that the gas pipes and fixtures comply with the foregoing rules.

Bidders will not be required to do the station- finish work, nor to provide or lay tracks, ties or ballast.

The work of construction under the contract will include the construction of all necessary sewers and connections along the route of the railroad in Broadway and in Canal street; also the necessary support, maintenance, readjustment and reconstruction of vaults adjacent to buildings, pipes, tubes, conduits, subways or other subsurface structures; the support and care, including underpinning where necessary, of all buildings, surface railroads and other structures, etc., affected by or interfered with during the construction of the work; also the restoration of the sidewalks and the temporary paving and maintenance of roadways.

The method of construction will be by trench excavation under cover, unless otherwise permitted by the Commission.

Bidders must examine the form of contract and the specifications, maps and plans; must visit the location of the work and inform themselves of the present conditions along the line thereof and make their own estimates of the facilities and difficulties attending the execution of the proposed work.

A fuller description of the work to be done is set forth, and other requirements, provisions, details and specifications are stated, in the printed form of contract and in the contract drawings therein referred to. Printed copies of the form of contract, bond and contractor's proposal may be had on application at the office of the Commission, No. 154 Nassau st., Borough of Manhattan, City of New York. The contract drawings may be inspected at the same office, and copies thereof may be purchased by prospective bidders by payment of five dollars (\$5). The printed form of contract and the contract drawings are to be deemed a part of this invitation.

The Commission is informed by the Department of Docks and Ferries that docks and bulkheads along the East River may be available for dumping purposes. Information in regard thereto may be obtained by any intending bidder upon inquiry at the office of the Commission.

Partial payments to the Contractor will be made monthly as the work proceeds as provided in the form of contract.

The Contractor will be required to complete the work as soon as practicable and within a period of forty (40) months.

Sealed bids or proposals will be received at the office of the Commission at No. 154 Nassau Street, Borough of Manhattan, City of New York, until the 22nd day of March, 1912, at twelve (12) o'clock noon, at which time, or at a later date to be fixed by the Commission, the proposals will be publicly opened.

Separate proposals must be submitted for the portion of the Lexington Avenue Route above described and for the underlying portion of the Canal Street Route above described. The Commission may accept the proposal for such portion of the Lexington Avenue Route while at the same time rejecting the accompanying proposal for such portion of the Canal Street Route. Proposals must be in the form prescribed by the Commission, copies of which may be obtained at the office of the Commission.

Statements based upon estimates of the Engineer of the quantities of the various classes of the work and of the nature and extent as near as practicable of the work required on such portion of the Lexington Avenue Route and on such portion of the Canal Street Route are to be found in the schedules forming a part of the form of Contractor's Proposal. The quantities given in such schedules are approximate only, being given as a basis for the uniform comparison of bids and no claim is to be made against the City on account of any excess or deficiency, absolute or relative, in the same, except as provided in the specifications and form of contract.

If the contract as awarded embraces both such portion of the Lexington Avenue Route and such portion of the Canal Street Route, the Commission further reserves the right to omit such portion of the Canal Street Route upon the terms and conditions stated in the form of contract.

All proposals must, when submitted, be enclosed in a sealed envelope endorsed "Proposal for Constructing Part of Rapid Transit Railroad Route No. 5, Section No. 2-A," and must be delivered to the Commission or its Secretary; and in the presence of the person submitting the proposal, it will be deposited in a sealed box in which all proposals will be deposited. No proposal will be received or deposited unless accompanied by a separate certified check drawn upon a national or state bank or trust company having its principal office in the City of New York, satisfactory to the Commission and payable to the order of the Comptroller of the City of New York for the sum of Fifteen Thousand Dollars (\$15,000). Such check must not be enclosed in the envelope containing the proposal.

The Unit Prices must not be improperly balanced, and any bid which the Commission considers detrimental to the City's interests may be rejected.

No proposal, after it shall have been deposited with the Commission, will be allowed to be withdrawn for any reason whatever.

The award of the contract will be made by the Commission as soon as practicable after the opening of the proposals.

Bidders whose proposals are otherwise satisfactory, in case the sureties or securities named by them are not approved by the Commission, may substitute in their proposals the names of other sureties or securities approved by the Commission, but such substitution must be made within five days after notice of disapproval, unless such period is extended by the Commission.

A bidder whose proposal shall be accepted shall, in person or by duly authorized representative, attend at the said office of the Commission within ten days after the delivery of a notice by the Commission that his proposal is accepted and that the contract is consented to by the Board of Estimate and Apportionment, and such bidder shall then deliver a contract in the form referred to, duly executed and with its execution duly approved.

At the time of the delivery of the contract, the Contractor will be required to furnish security to the City by giving a bond for thirty-five thousand dollars (\$35,000) if the contract as awarded embraces only such portion of the Lexington Avenue Route and fifty thousand dollars (\$50,000) if the contract as awarded embraces both such portion of the Lexington Avenue Route and such portion of the Canal Street Route. At the option of the successful bidder cash or approved securities may be deposited instead of giving a bond. If securities are deposited in place of a bond under this contract, they must be of the character of securities in which Savings Banks may invest their funds and must be approved by the Commission.

The Contractor's bond must be in the form annexed to the form of contract. In addition and as further security fifteen per centum (15%) of the amounts certified from time to time to be due to the Contractor will be deducted until the amounts so deducted and retained shall equal the sum of One Hundred Thousand Dollars (\$100,000) if the contract as awarded embraces only such portion of the Lexington Avenue Route and One Hundred and Fifty Thousand Dollars (\$150,000) if the contract as awarded embraces both such portion of the Lexington Avenue Route and such portion of the Canal Street Route. Thereafter there shall be so deducted and retained for such

purpose ten per centum (10%) of the amounts certified from time to time to be due to the Contractor. The Contractor may from time to time withdraw portions of the amounts so retained upon depositing in lieu thereof corporate stock of The City of New York equal in market value to the amount so withdrawn.

In case of failure or neglect to execute and deliver the contract or to execute and deliver the required bond or to make the required deposit, such bidder will, at the option of the Commission, be deemed either to have made the contract or to have abandoned the contract. In the latter case, the Commission will give notice thereof to such defaulting bidder, and the Commission may thereupon proceed to make another contract with such, if any, of the original bidders, as, in the opinion of the Commission, it will be to the best interests of the City to contract with, or may by new advertisement invite further proposals. The defaulting bidder shall thereupon be liable to the City for all loss and damage by it sustained, including the excess, if any, of the amount it shall pay any other Contractor over the amount of the bid of such defaulting bidder.

If the Commission shall give notice to any bidder that his or its proposal is accepted and that the contract is consented to by the Board of Estimate and Apportionment, and if the bidder shall fail within ten days thereafter or within such further period, if any, as may be prescribed by the Commission, to execute and deliver the bond with sureties, or to make the required deposit, then the invitation to Contractors and proposal accepted as aforesaid shall be a contract binding the bidder to pay to the City the damage by it

NOTICE TO BIDDERS AT SALES OF OLD BUILDINGS, ETC.

TERMS AND CONDITIONS UNDER WHICH BUILDINGS, ETC., WILL BE SOLD FOR REMOVAL FROM CITY PROPERTY.

THE BUILDINGS AND APPURTENANCES thereto will be sold to the highest bidder, who must pay cash or certified check, drawn to the order of the Comptroller of The City of New York, and must also give a certified check or cash in half the amount of the purchase price as security for the faithful performance of the terms and conditions of the sale. Where the amount of the purchase price does not equal or exceed the sum of \$50, the sum of \$50 shall be the amount of the security to be deposited. This security may at any time after the expiration of the contract period be applied by the City to the cost of completing any of the work required under the contract, but unfinished at the expiration of the contract period.

The purchaser shall not lease, occupy, cause or permit the building or buildings, etc., purchased by him to be used or occupied for any purpose other than that of their speedy removal, nor shall he collect any rental or other revenue for the use of either the land or the buildings, etc., situated thereon. The breach of either or any of these conditions shall forthwith void the sale and cause immediate forfeiture of the purchase money and the security deposited for the faithful performance of the conditions of the sale. The placing therein or permitting the occupancy of any such building by any tenant free, for rent or otherwise, excepting the necessary watchmen or the workmen engaged in the actual demolition thereof, shall of itself be a breach of the above conditions of sale.

The sale will be as of the condition of the property on date of delivery thereof to the purchaser. The City of New York will not be responsible for any change or loss which may occur in the condition of the buildings, or their appurtenances between the time of the sale thereof and the time of delivering possession to the purchaser, after being properly vacated of all tenants. The sale and delivery to purchaser will be made as nearly together as the circumstance of vacating the structures of their tenants will permit.

All the material of the buildings, sheds, walks, structures and cellars of whatsoever nature, with their exterior and interior fixtures, appurtenances and foundations of all kinds, except the exterior walls of the buildings and their foundations and the sidewalks and curb in front of said buildings, extending within the described area shall be torn down and removed from the premises. None of the dirt, debris or waste resulting from demolition shall be allowed to remain on the premises, except old mortar or plaster only, which may be left, but not higher at any point than two feet below the curb opposite that point. The exterior walls and their foundations shall be taken down only to a plane whose elevation shall be the level of the curb in front of the building. Where there is no curb the elevation of the surrounding ground shall be considered curb level. All wells, cesspools, sinks, etc., existing on the property must be filled to the level of the surrounding ground with clean earth.

The purchaser at the sale shall also withdraw and remove all abandoned water taps and old service mains, and in place thereof cause to be inserted a brass plug in the main water pipe in the street, in compliance with the rules and regulations of the Department of Water Supply, Gas and Electricity, and furnish the Department of Finance with a certificate from the Department of Water Supply, Gas and Electricity that this has been performed.

The purchaser at the sale shall also remove all house sewer connections to the main sewer in the street, and the opening of the main sewer in street shall be properly closed in compliance with the directions of the Bureau of Sewers in the Borough in which the buildings are situated, and furnish the Department of Finance with a certificate from the Bureau of Sewers that the work has been properly performed.

The permit for all opening in the street to be obtained by and at the expense of the purchaser of the building.

Failure to remove said buildings, appurtenances, or any part thereof, within thirty days from the day of possession will work forfeiture of ownership of such buildings, appurtenances, or portion as shall then be left standing, together with all moneys paid by said purchaser on account thereof at the time of the sale, and the bidder's assent to the above conditions being understood to be implied by the act of bidding, and The City of New York will, without notice to the purchaser, cause the same to be removed, and the cost and expense thereof charged against the security above mentioned.

The work of removal must be carried on in every respect in a thorough and workmanlike manner, and must be completed within thirty days from the day of possession, and the successful bidder will provide and furnish all materials of labor and machinery necessary thereto, and will place proper and sufficient guards and fences and warning signs by day and night for the prevention of accidents, and will indemnify and save harmless, The City of New York, its officers, agents and servants, and each of them, against any and all suits and actions, claims and demands of every name and description brought against it, them or any of them, and against and from all damage and costs to which it, they or any of them be put by reason of injury to the person or property of another, resulting from negligence or carelessness in the performance of the work, or in guarding the same, or from any improper or defective materials or machinery, implements or appliances used in the removal of said buildings.

Where party walls are found to exist between buildings purchased by different bidders, the materials of said party walls shall be understood to be equally divided between the separate purchasers.

Party walls and fences, when existing against adjacent property not sold, shall not be taken down. All furrings, plaster, chimneys, projecting brick, etc., on the faces of such party walls are to be taken down and removed. The walls shall be made permanently self-supporting, beam-holes, etc., bricked up, and the wall pointed and made to exclude wind and rain and present a clean exterior. The roofs and adjacent buildings shall be properly flashed and painted and made watertight where they have been disturbed by the operations of the contractor.

The Comptroller of The City of New York reserves the right on the day of sale to withdraw from sale any of the buildings, parts of buildings and machinery included therein, or to reject any and all bids; and it is further

Resolved, That, while the said sale is held under the supervision of the Commissioners of the Sinking Fund, the Comptroller is authorized to cause the sale to be advertised and to direct the sale thereof as financial officer of the City.
