44 Beaver Street 12th Floor
New York, New York 10004

Dear Assistant Commissioner Szarpanski:

As a resident of Waterview Towers, I am concerned about my health and my overall quality of life, living within a quarter of a mile of the proposed Southwest Brooklyn Converted Marine Transfer Station.

I am aware that the proposal addresses the issue of odor, vermin, and additional truck traffic that will be the result of DOS's trucks and commercial carriers. What I need to know is what "stringent operation and maintenance requirements, as well as additional enforcement measures will minimize the impacts of transfer station operations" on the quality of life I have now? What restrictions will be placed on "air emissions coming from stationary equipment and non-road vehicles operated at transfer stations" and the "state-of-the-art odor control equipment at all putrescible transfer stations" especially when the wind blows from a westerly direction?

And, I would like my environmental concerns addressed as well: there are frequently used baseball and soccer fields, an active school for children with special needs, as well as a wildlife sanctuary to the south of the site, there is an amusement area to the north. There is the often abused Gravesend Bay, all ready receiving sewage, will it also be accepting seepage from the misplaced dumping of garbage? But most importantly, the long range health effects on all the residents of this community.

Please thoroughly address these issues BEFORE the opening of the Southwest Brooklyn converted Marine Transfer Station.

Thank you,
