Pesticide Use by New York City Agencies in 2008

EXECUTIVE SUMMARY

Local Law 54 of 2007 requires the New York City Department of Health and Mental Hygiene (DOHMH) to summarize annual City agencies' pesticide use. In 2008, 26 municipal agencies reported to DOHMH their pesticide use in a format that enabled summarization within, and across agencies. This report summarizes pesticides applied on or behalf of agencies on city owned or leased property. Key findings include:

- Pesticides were applied a total of 132,959 times by New York City in 2008. Agencies used a total of 8,908 gallons and 166,103 pounds of pesticides.
- Rodenticides were the most frequently applied type of pesticide, accounting for nearly 52% of all applications.
- Insecticides were the most heavily used type of pesticide, accounting for 69% by volume and 64% by weight of all pesticides used by City agencies.
- New York City agencies are not the only users of pesticides in New York City. Their use accounts for 5% of the total volume of liquid pesticides, and 17% of the total pounds of solid pesticides applied within the five boroughs of New York City.
- Because more agencies reported data electronically this year, the quantities of pesticides used in 2008 is reported to be greater than in 2007. It is not yet possible to accurately report trends in pesticide use.

Pesticide Use by New York City Agencies in 2008

I. BACKGROUND

When Local Law 37 was enacted on May 9, 2005, New York City became the largest municipality in the nation to regulate the use of pesticides on city-owned and leased property. Local Law 37 established new requirements regarding pesticide use on property owned or leased by the City, including the prohibition of certain pesticide products, posting of warning notices prior to pesticide use, and the requirement that agencies report their pesticide use on annual basis. With the enactment of Local Law 37 in May 2005, prohibitions from use were phased in for certain pesticides used by agencies or their contractors on City owned and leased properties. By November, 2005, EPA Toxicity Category 1 (signal word “danger”) was prohibited. In May 2006, use of all pesticides classified by the EPA as possible, probable or known human carcinogens ended. And in November 2006, use of all pesticides classified by the State of California’s Office of Environmental Health Hazard Assessment as developmental toxins ceased.

Local Law 37 exempted from prohibition several uses and products that posed little or no risk of human exposure, including rodenticides placed in tamper-proof containers or applied directly into rat burrows or inaccessible areas, containerized insect baits, and certain other types of insecticides such as boric acid, silica, and diatomaceous earth. The New York City Department of Health and Mental Hygiene (DOHMH), under Local Law 37 authorization, further waived from prohibition the use of all insecticide gels containing the ingredients fipronil and hydramethylnon due to their effectiveness and low potential for human exposure. In addition, Local Law 37 empowered DOHMH to consider and grant requests for waivers from prohibition on a case-by-case basis. DOHMH maintains a webpage on Local Law 37 at <http://nyc.gov/health/ll37> that includes a list of all waivers granted to agencies.

In October, 2007 New York City enacted Local Law 54 which requires City agencies to report their pesticide use to DOHMH, and for DOHMH to issue a summary report to the City Council and the Mayor. This is the second annual report and fulfills these requirements. City agencies have made significant improvements since the enactment of Local Law 37 to the quality and delivery of pesticide use data. In 2006, just three agencies provided data in an electronic format that enabled data to be summarized. This year, twenty six agencies reported electronic data.

II. SOURCES OF PESTICIDE USE DATA

New York City agencies are required to report to DOHMH their pesticide use by February 1 for the preceding calendar year. This report summarizes data received by the Department for pesticides applied during calendar year 2008. All reporting New York City agencies and their contractors provided data to DOHMH in electronic format.

DOHMH launched and hosts an electronic reporting tool, the New York Pesticide Use Reporting System (NYCPURS) that all agencies, contractors and licensed pest control applicators can register to use. In August 2008, DOHMH launched the import function of NYCPURS permitting importation of data maintained by other electronic systems. Several agencies that previously reported only paper records have started using NYCPURS to implement electronic reporting.

Source data for each pesticide application includes the product name, Environmental Protection Agency (EPA) registration number, the quantity used (expressed as either weight or volume), method of application, and the date and location the product was applied. DOHMH utilizes the EPA's pesticide information system to link these data - by registration number - to determine a product's pesticide type and class, toxicity score, and its class and active ingredients. In addition, we linked these data to the EPA Office of Pesticide Programs' List of Chemicals Evaluated for Carcinogenic Potential and the State of California's List of Chemicals Known to the State to Cause Cancer or Reproductive Toxicity, both downloadable at <http://nyc.gov/health/ll37>.

III. METHODS AND LIMITATIONS

Data in a variety of electronic formats were imported into a single database, where it was checked for quality, accuracy and validity. Weight and volumetric units were standardized to pounds and gallons, respectively. Each record of data was assigned an agency identifier corresponding to the source agency. Data were analyzed using SQL, Excel and Access. We analyzed data by pesticide type and class, and report total numbers, pounds and gallons of applications for New York City, and by agency on whose behalf the pesticides were applied.

Where DOHMH was able to evaluate the completeness of these records, it is reported by agency, below. It is still not possible to fully determine whether each agency was able to report each pesticide application. Many agencies depend upon contractors to maintain records of pesticides applied, and may not be certain that the contractors have fully complied with Local Law 37 reporting requirements. There are some obvious gaps in the data:

- Of the City University of New York's many community colleges and universities, just eight reported 2008 pesticide use data
- A review of the 2008 data demonstrates that there is incomplete reporting of pesticides used for disinfection and biocidal purposes, as was the case in 2007. While these pesticides are exempt from Local Law 37's prohibitions and prior notification requirements, they are not exempt from reporting mandates.
- The formats used were more streamlined for 2008 and we were able to capture more information pertaining to the target organisms of the pesticides applied by agencies.

Despite the above mentioned limitations, the data captured this year is more complete and more agencies used NYCPURS. We expect to see further improvements in the data over the next year as more agencies fully adopt electronic recordkeeping, migrating existing electronic or paper systems to the NYCPURS system developed by DOHMH for electronic recordkeeping. Additional information about NYCPURS is available at <http://nyc.gov/health/ll37>.

IV. PESTICIDE USE FINDINGS

A. TYPES OF PESTICIDES USED BY AGENCIES

Four main types of pesticides were applied by agencies: rodenticides (products used to kill rodents); insecticides (to kill insects); herbicides (to kill plants) and fungicides (to kill molds and other fungi).

Insecticides

A total of 6,154 gallons and 106,744 pounds of insecticides were applied by New York City in 2008, accounting for 69.1% by volume, and 64.3% by weight of the total applications. Insecticides used by NYC agencies in 2007 were largely comprised of three classes of products; pyrethrins and pyrethroids, organophosphates and carbamates.

Pyrethrins, Pyrethroids, and Synergists

Pyrethrins and pyrethroids are less acutely toxic than the organophosphate and carbamate pesticides they have largely replaced. Accidental poisonings from professional applications are very rare, though personal use of aerosol and fogging product formulations have been associated with acute exposures, poisonings and fires. Some pyrethroids may be respiratory allergens for sensitized people, including asthmatics. EPA has classified pyrethrins, their synergists, and several pyrethroids as suspected human carcinogens. Pyrethrins and pyrethroids break down relatively quickly when used outdoors, but persist longer when applied indoors.

Common pyrethroid active ingredients are cypermethrin, cyfluthrin, esfenvalerate, and deltamethrin. Pyrethrin and pyrethroid products used by agencies in 2008 include Cynoff EC Insecticide®, ULD BP-300 Insecticide®, Demand CS Insecticide®, Tempo SC Insecticide®, Suspend SC Insecticide® and Evercide Residual Insecticide Concentrate 2662®.

Together, pyrethrins and pyrethroids accounted in 2008 for 95.9% of the total insecticides applied by volume and 2.4% by weight an increase from 89.6% and 1.1% respectively in 2007.

Organophosphates and Carbamates

Organophosphate and carbamate insecticides both function by inhibiting the neurotransmitter cholinesterase. Until EPA banned their use for most indoor applications in 1999 and 2000, organophosphates were the most heavily used class of insecticides. EPA also allowed the registrations for several carbamates to lapse.

Common organophosphate active ingredients include acephate and trichlofon. Common carbamate active ingredients include propoxur and carbaryl. Organophosphate and carbamate products applied by agencies in 2008 include Orthene PCO Formula II® and Sevin Brand RP4 Carbaryl Insecticide ®.

Reports submitted by agencies showed that, in 2008, the use of organophosphates and carbamates accounted for just 0.2% of the total insecticides applied by agencies by volume, and 1.0% by weight, remaining a very small percentage of the insecticides used by city agencies.

“Best Management Practices” Insecticides

In recent years, several insecticide products have been introduced to the market whose proper use involves little or no potential for human exposure but that have been demonstrated to be highly effective at controlling pests. These products include biological pesticides for mosquito control and gels and baits for cockroach and other insect control.

Common active ingredients for these products include boric acid, silica gel, diatomaceous earth, the bacteria *bacillus sphaericus* and *bacillus thuringiensis*, hydramethylnon and fipronil, avermectin, and indoxacarb. Some of the products used by agencies for this reporting year were Maxforce Professional Insect Control Roach Killer Bait Gel®, Redzone Bait®, Vectobac CG Biological Larvacide Granules®, Vectolex CG Biological Larvacide®, Avert Prescription Treatment TC 93A Bait®, and DuPont Advion Cockroach Gel Bait®.

In 2008 2.4% of the total insecticides applied by volume, and 94.4% by weight, were insecticidal dusts, gels and baits, or biological larvicides. Excluding WNV larvicides, the totals equal 50.1% of insecticide products by weight.

Herbicides

The herbicides used by New York City agencies in 2008 were used primarily for vegetation control in parks and for the maintenance of highways and street medians. The active ingredients most commonly used in 2008 were glyphosate, dinitroanilines, chlorophenoxyacetic acids and ureas. Herbicides were a major contributor of pesticide use by agencies.

A total of 1,860 gallons and 9,918 pounds were applied, accounting for 20.9% of total volume and 6.0% of total weight of all pesticides used by agencies in 2008.

Glyphosate

The most heavily used herbicides applied as a liquid by agencies were glyphosates in Roundup® products. Glyphosate is a broad-spectrum, non-selective systemic herbicide that can be used throughout the growing season. By itself, the active ingredient glyphosate poses little risk of acute poisonings or chronic health effects and has not been shown to be carcinogenic. Glyphosphate use has increased as agencies have phased out the use of herbicides prohibited under Local Law 37.

Dinitroaniline

Dinitroaniline-based herbicides, which are often combined with fertilizers, are used early in the growing season as pre-emergents to prevent full germination and plant growth. They are of low acute toxicity to people, but several dinitroanilines are classified by USEPA as suspected human carcinogens. Dinitroaniline herbicides break down slowly. Common dinitroaniline

active ingredients are pendimethalin, trifluralin, benefin and benfluralin. Common dinitroaniline products used by agencies in 2008 were Pre-M 3.3 EC Turf Herbicide® and Twin Light Professional Trifluralin 5% Granular®.

Chlorophenoxyacetic Acids

The chlorophenoxyacetic acid herbicides are a family of related chemicals that are often combined in products. EPA classifies one member of this class of pesticides -- mecoprop-p – as a suspected carcinogen. Common chlorophenoxyacetic acid active ingredients are 2,4-D, mecoprop (MCPP), mecoprop-p (MCPP-P), dicamba and MCPA. Common chlorophenoxyacetic acid products used by agencies in 2008 were Trimec 937 Herbicide® and Speed Zone Broadleaf Herbicide®

Ureas

Like dinitraniline herbicides, urea herbicides are of low acute toxicity but pose chronic risks. Diuron, a urea herbicide among the ten most heavily used herbicides reported in the City in 2002, is classified by the EPA as a likely human carcinogen. Other urea herbicides have been classified as possible human carcinogens. All urea herbicides are highly persistent. Common Urea active ingredients are Diuron and Siduron. Common urea products used by NYC agencies in 2008 were Dupont Oust Extra Herbicide® and The Anderson's Professional Turf Products Crabgrass Preventer 4.7%®.

Rodenticides

Most rodenticides act as anticoagulants and all are acutely toxic if ingested. Common rodenticide active ingredients are bromadiolone, diphacinone, brodifacuum, zinc phosphide and warfarin. Some common rodenticide products used by agencies in 2008 were: Contrac All-Weather Blox®, Generation Mini Blocks®, Weatherblok Bait with Bitrex® and Ditrac All-Weather Blox®.

In 2008, a total of 76 gallons and 35,664 pounds of rodenticides were applied by City agencies, accounting for 0.8% of all pesticides applied on NYC owned or leased property by volume, and 21.5% by weight.

Fungicides

Most of the most commonly applied fungicides are classified by EPA as suspected carcinogens. Because many of these fungicides are also highly persistent, with half-lives measured in months and years, the potential for exposure can exist throughout the growing season. Degradation does not necessarily reduce the hazard, because some fungicides also have highly toxic breakdown products. Fungicides were most commonly applied by NYC on golf courses, and these applications are exempt from Local Law 37 prohibitions.

The active ingredients of fungicides commonly used in NYC in 2008 include: chlorothalonil, thiophanate-methyl, PCNB, iprodione and mancozeb. Common fungicide products applied in 2007 include Echo 720 Agricultural Fungicide®, Aliette WDG Brand

Fungicide®, Daconil SDG® and Bayleton 50 Turf and Ornamental Fungicide in Water Soluble Packets®.

Fungicides are a relatively minor contributor to overall pesticide use by agencies, accounting for 8.6% of the total pesticide applied by volume and 8.3% by weight.

B. SUMMARY OF CITYWIDE PESTICIDE USE

Pesticide use can be measured and compared in a number of ways. Throughout the remainder of this report, we describe the frequency with which pesticides are applied (how many times a pesticide is used), as well as the quantity of pesticides applied. Quantities for liquid applications are measured as volume in gallons. Quantities for solid applications are measured as weight in pounds. Pesticides were applied a total of 132,959 times by New York City in 2008. The pesticide applied most frequently by New York City was rodenticide. The majority of rodenticides applied by the City of New York is placed directly into rat burrows and poses little risk of exposure to the public. Insecticides were the most heavily used in terms of weight and volume. In 2008, 89% of the insecticides reported by weight were bacterial products designed to kill mosquito larvae in stagnant waters, away from human contact. If we exclude these products, which were used as part of the West Nile Virus control program then 17% of the total pesticide by weight would be due to insecticides. Table 1, below, summarizes these findings. This table, as all others that follow, is sorted in order of descending number of applications.

Table 1. Total Applications Reported Applied by NYC Agencies in 2008, by Pesticide Type

Pesticide Type	Volume		Weight		Times Applied	
	Gallons	% of Total	Pounds	% of Total	Number	% of Total
2008						
Rodenticide	76	0.8%	38,267	22.4%	75,979	47.6%
Insecticide	6,332	69.7%	108,752	63.7%	78,421	49.1%
Herbicide	1,860	20.5%	9,881	5.8%	4,107	2.6%
Fungicide	765	8.4%	13,789	8.1%	525	0.3%
Other	56	0.6%	30	0.0%	602	0.4%
Totals	9,089		170,718		159,634	

Table 2, below lists the ten most frequently used products used for each pesticide type on New York City owned or leased property in 2008. For each, we list the total volume, weight and number of applications, as well as the active ingredient(s), the EPA toxicity category, whether the product is considered by EPA a known, possible or suspect carcinogen, and whether the product is listed by the State of California as a reproductive hazard. For this and subsequent product tables, the toxicity category refers to the EPA's assigned label warning to indicate the degree of acute toxicity from oral, dermal and inhalation exposures on a scale from 1 to 4. Toxicity Category 1 indicates pesticides considered highly toxic and whose label requires the signal word, "Danger –Poison!" and the skull and crossbones symbol. Toxicity Category 2 products are considered moderately toxic and product labels carry the word "Warning!" Toxicity Category 3 products are considered to be slightly toxic while Toxicity 4 products are considered relatively non-toxic. Both toxicity categories 3 and 4 carry the signal word "Caution!" A

complete list of products used by New York City by pesticide class is included in Appendix 1 to this report.

C. SUMMARY OF AGENCIES' PESTICIDE USE

For each reporting agency, we summarize below total pesticide use by pesticide type, followed by a listing of pesticide products used and their total use by reporting City agencies.

Administration for Children's Services

The New York City Administration for Children's Services provides for the protection of New York City's children from abuse and neglect. Along with their community partners, Children's Services provides neighborhood-based services to help ensure children grow up in safe, permanent homes with strong families. The agency contracts for pest control through the city-wide contract administered by DCAS. Table 3 summarizes pesticide use by pesticide type. Table 4 lists all pesticide products used by ACS in 2008.

Table 3: Types of Pesticides Used by ACS in 2008

Pesticide Type	Volume		Weight		Times Applied	
	Gallons	% of Total	Pounds	% of Total	Number	% of Total
Rodenticide	0.0	0.0%	66.8	75.2%	101	25.4%
Insecticide	1.0	97.4%	22.0	24.8%	295	74.1%

Other	0.0	2.6%	0.0	0.0%	2	0.5%
Totals	1.0		88.8		398	

Table 4: Pesticide Products Used by ACS in 2008 by Pesticide Type

Aging

The Department for the Aging (DFTA) contracts with non-profit senior service providers to administer 76 different city-owned and city-leased sites, 33 of which engage in food preparation or storage. These facilities are privately operated and contract individually with private vendors for pest control to address typical structural urban pest issues, such as roaches, rodents, and flies. DFTA has provided a list of these service locations and their pest control providers.

Board of Elections

The Board of Elections is the administrative body that oversees elections through its staff at its main and five borough offices. The agency contracts for pest control through the city-wide contract administered by DCAS. Table 5 summarizes pesticide use by pesticide type. Table 6 lists all pesticide products used by BOE in 2008.

Brooklyn Public Libraries

The Brooklyn Public Library (BPL) serves Brooklyn's 2.5 million residents, offering thousands of public programs, millions of books and use of more than 850 free Internet-accessible computers at its 66 locations. Contractors are hired for pest management as needed and the major pest infestations are roaches and mice. Table 7 summarizes pesticide use by pesticide type. Table 8 lists all pesticide products used by BPL in 2008.

Chief Medical Examiner

The Office of Chief Medical Examiner (OCME) is responsible for investigating deaths in unusual circumstances, where an application for cremation is made, provides additional forensic services to support criminal investigations and manages all functions of the City mortuary. The agency contracts for pest control through the city-wide contract administered by DCAS. Table 9 summarizes pesticide use by pesticide type. Table 10 lists all pesticide products used by OCME in 2008.

City University of New York

The City University of New York is the nation's largest urban public university and is comprised of 23 institutions. The University serves more than 243,000 degree-credit students and 240,000 adult, continuing and professional education students. Individual institutions contracts for pest control services through private vendors. The data reported is information received from 8 colleges, Borough of Manhattan Community College, John Jay College, La Guardia Community College, Law School, Lehman College, Queens Borough Community College, Queens College and York College. Table 11 summarizes pesticide use by pesticide type. Table 12 lists all pesticide products used by CUNY in 2008.

Citywide Administrative Services

The Department of Citywide Administrative Services (DCAS) oversees surplus city-owned property and the commercial real estate portfolio for the City. Of the 14,000 city-owned lots, DCAS is directly responsible for the management of approximately 2,400 of these properties. DCAS cleans and maintains 53 DCAS-managed buildings with 13,365,398 square feet of space throughout the city. These include City Hall, the four Borough Halls, the Manhattan and Brooklyn Municipal Buildings, and all state and municipal court buildings. DCAS administers the city-wide contract for pest control which city agencies may use to purchase pest control services. Several agencies are housed in DCAS managed buildings and the report submitted reflects these applications. Table 13 summarizes pesticide use by pesticide type. Table 14 lists all pesticide products used by DCAS in 2008.

Corrections

The Department of Corrections (DOC) oversees 44 facilities, including ten correctional facilities that have food preparation areas, laundries, residential areas for inmates, and office space. DOC does not employ contractors for pest management purposes, but relies on ten in-house pest control professionals and works with DCAS and HHC in maintaining certain facilities. Table 15 summarizes pesticide use by pesticide type. Table 16 lists all pesticide products used by DOC in 2008.

Education

Pest management at all New York City public schools is overseen by the Department of Education (DOE) with fourteen in-house staff who conduct monthly monitoring inspections at 850 schools. DOE contracts with several pest control companies to additionally provide services

for an additional 200 schools. Table 17 summarizes pesticide use by pesticide type. Table 18 lists all pesticide products used by DOE in 2008.

Environmental Protection

The Department of Environmental Protection (DEP) has over 1,700 facilities upstate and downstate. These include water pollution control plants, well stations, pumping stations, shafts, chambers, reservoirs, aqueducts, tunnels, gate houses, office space, garages, repair shops, maintenance shops, and police precincts within New York City. DEP contracts for some pest control services and employ approximately 20 licensed applicators for upstate reservoir pest control. Table 19 summarizes pesticide use by pesticide type. Table 20 lists all pesticide products used by DEP in 2008.

Table 19: Types of Pesticides Used by DEP in 2008

Finance

The Department of Finance (DOF) collects City revenues, ensures compliance with City tax and other revenue laws, evaluates all real property in the City, provides a forum for the public to dispute tax and parking violation liability, and maintains property records. The agency contracts for pest control through the city-wide contract administered by DCAS. Table 21 summarizes pesticide use by pesticide type. Table 22 lists all pesticide products used by DOF in 2008.

Health and Hospitals Corporation

The New York City Health and Hospitals Corporation (HHC) oversees eleven hospitals, six diagnostic and treatment centers, 82 community health and school-based clinics, and five long-term care/specialty hospital and nursing home facilities. Because each facility is managed separately, pest control protocols differ among facilities. A few facilities have pest control professionals on staff, but the majority relies on one of two outside contractors. Table 25 summarizes pesticide use by pesticide type. Table 26 lists products by pesticide types. Each product is listed, unless more than 10 products of a given type were used, in which case the 10 most frequently applied products are listed. Appendix 2 includes a complete listing of products used by HHC in 2008.

Table 25: Types of Pesticides Used by HHC in 2008

Health and Mental Hygiene

The Bureau of Veterinary and Pest Control Services at DOHMH protects the public from animal- and vector-borne diseases and other hazards, including those that result from uncontrolled or unregulated rodents and other animals, and from mosquito-borne pathogens. Two programs, Pest Control Services (PCS) and Vector Surveillance and Control (VSC) have pest management responsibilities. PCS focuses on rodent control – performing inspections, cleanups and treatments of both private and public property. Currently, PCS employs twenty-one exterminators to bait properties that have signs of active rodents with rodenticide placed either directly in rat burrows or in tamper resistant bait stations. Though Local Law 37 requires the reporting of pesticide use on only public property, applications on private property done by PCS are included in Tables 27 and 28. VSC is charged with mosquito management. Table 27 summarizes pesticide use by pesticide type. Table 28 lists all pesticide products used by DOHMH in 2008.

Homeless Services

The Department of Homeless Services (DHS) manages homeless shelters and dormitory facilities across the City. Of these, six are Family Services operated, five provide dormitory

facilities for families with children and one facility, PATH, is an intake facility. There are four adult facilities which also provide housing for men. DHS also operates and manages warehouses. Pest management services, which primarily address rodent and cockroach infestations, are provided by an outside contractor. Table 29 summarizes pesticide use by pesticide type. Table 30 lists all pesticide products used by DHS in 2008.

Housing Authority

The New York City Housing Authority (NYCHA) manages 2,644 residential buildings and 178,466 apartments, as well as office space and grounds that cover 2,502 acres. NYCHA currently has a staff of some 75 pest control professionals that perform routine inspections and treatments, carry out specialized intensive IPM interventions, apply pesticides, and respond to complaints and requests from other agencies. NYCHA staff members regularly address a range of insect and rodent problems, including interior mice, cockroaches and bedbugs and exterior rats, weeds, and mosquito control. NYCHA made great strides in 2008 in completing its electronic reporting system and down loaded its data into our NYCPURS system. Table 31 summarizes pesticide use by pesticide type. Table 32 lists the products used by NYCHA in 2008.

Housing Preservation and Development

Housing Preservation and Development (HPD) oversees occupied and vacant residential and commercial buildings, vacant lots as well as a limited number of agency offices. In addition, its Emergency Repair Program occasionally encounters and responds to rats and fleas in occupied private buildings. There are no certified applicators on staff and the agency contracts for pest control services. Table 33 summarizes pesticide use by pesticide type. Table 34 lists all pesticide products used by HPD in 2008.

Parks and Recreation

New York City's has 28,000 acres of parks, playgrounds, athletic fields, natural areas, recreational facilities, comfort stations, beaches, historic buildings, and parkways maintained by the Department of Parks and Recreation (DPR). The major pest issues facing DPR are weeds (including weed shrubs and weed trees) and rodents. Rarer infestations of exotic insect pests and diseases, often targeting trees, also occur. To address these, DPR employs 104 certified pesticide applicators. Herbicides account for the largest share of DPR's total pesticide use. Contractors are hired for pest management when peripheral rodent problems arise on capital projects.

This data includes pesticides applied on all city-owned golf courses. Local Law 37 exempts these locations from pesticide prohibitions. The table also includes the data form sister organizations that operate on DPR property such as zoos, conservancies, and botanic gardens. Table 39 summarizes pesticide use by pesticide type. Table 40 below lists for each pesticide type, all products used, unless there were more than 10, in which case the 10 most frequently applied products are listed. Appendix 2 includes a complete product listing for DPR.

Table 39: Types of Pesticides Used by DPR in 2008

Probation

The New York City Department of Probation is charged with protecting the community by intervening in the lives of offenders, holding them accountable and serving as a catalyst for positive change. In collaboration with the community and other justice partners they provide information and services to the courts, give victims a voice in the justice system, and help strengthen families. The agency contracts for pest control through the city-wide contract administered by DCAS. Table 45 summarizes pesticide use by pesticide type. Table 46 lists all pesticide products used by DOP in 2008.

Queens Public Libraries

The Queens Public Library (QPL) manages 64 libraries as well as indoor, outdoor and office facilities. Contractors are hired for pest management as needed and the major pest infestations are roaches and mice. Table 47 summarizes pesticide use by pesticide type. Table 48 lists all pesticide products used by QPL in 2008.

Table 47: Types of Pesticides Used by QPL in 2008

Sanitation

The Department of Sanitation (DSNY) manages garages, office buildings, transfer stations, and various publicly-owned lots throughout the city. DSNY employs two certified pesticide applicators that make routine visits to facilities and responds to emergency calls because of the nature of the agency's work – managing garbage – pest problems are endemic at some facilities. DSNY also contracts for weed control on some of the City's rights-of-way. DSNY began entering data from staff into our NYCPURS system in 2008. Table 49 summarizes pesticide use by pesticide type. Table 50 lists the products used by DSNY.

Table 49: Types of Pesticides Used by DSNY in 2008

Taxi and Limousine Commission

The Taxi and Limousine Commission (TLC) licenses and regulates over 50,000 vehicles and approximately 100,000 drivers, performs safety and emissions inspections of the more than 13,000 medallion taxicabs three times each year, and holds numerous hearings for violations of City and TLC rules and regulations, making it the most active taxi and limousine licensing regulatory agency in the United States. The agency contracts for pest control through the city-wide contract administered by DCAS. Table 51 summarizes pesticide use by pesticide type. Table 52 lists all pesticide products used by TLC in 2008.

Transportation

The Department of Transportation (DOT) has a staff of over 4,000 that oversees one of the most complex urban transportation networks in the world. They manage approximately 5,800 miles of streets, sidewalks, and highways and 789 bridge structures, including six tunnels. They operate the Staten Island Ferry, oversee ferry operations on City-owned piers and operate approximately 75 facilities throughout the City. DOT is responsible for pest management at maintenance yards, lots, and agency offices throughout the city, as well as on rights-of-way along city highways. DOT is also contracted by New York State to provide right-of-way maintenance on state highways within city borders. Table 53 summarizes pesticide use by pesticide type. Table 54 lists all pesticide products used by DOT in 2008.
