**RE: Monthly Water Quality Report for July 2021**

Dear Ms. Huang, Mr. Palmer and Ms. Lynch:

Enclosed, please find the New York City Water Quality report for the month of **July 2021**. There was no well pumpage to distribution in the Groundwater System this month. Croton water was feeding into distribution for the month of July. In addition to the following list of compliance reports, electronic files containing compliance and non-compliance data for this month are being emailed to you.

- Raw Water Fecal Coliform Report
- Raw Water Turbidity Report
- Distribution Microbiological Compliance Reports
  - Summary
  - Positive Samples
  - Resamples
- Chlorine Residual Reports
  - Entry Point Online
  - Entry Point Daily Minimum
  - Heterotrophic Plate Count
  - Monthly Summary
- Distribution Turbidity Reports
  - Distribution Turbidity Report
  - Source Water > 1.49 NTU Table
- Color Entry Point Report

## *Monthly Water Quality Report – July 2021*

- Fluoride Reports
  - Fluoride Entry Point Report
  - Distribution Fluoride Report
- Quarterly Disinfection By-products Report

The reports are summarized as follows:

### **FAD REQUIREMENTS**

#### ***1. Raw Water Fecal Coliform Concentrations (Section 141.71(a)(1)):***

**Requirements met.** The Delaware Aqueduct effluent from Kensico Reservoir exhibited fecal coliform concentrations in water prior to disinfection at levels less than or equal to 20 CFU/100 mL in at least 90% of the samples collected in the six-month period from February 1, 2021 to July 31, 2021. The six month running percentage of samples collected with fecal coliform concentrations >20 CFU/100 mL was 0.00% for the Catskill/Delaware System for this time period.

#### ***2. Raw Water Turbidity (Section 141.71(a)(2)):***

**Requirements met.** The raw water leaving Kensico Reservoir via the Delaware Aqueduct in compliance samples collected at DEL18DT, just prior to disinfection, exhibited turbidity levels less than or equal to 5 NTU on an ongoing basis during the month. The highest reported turbidity value was 0.95 NTU on the Catskill/Delaware System for the month.

#### ***3. Entry Point Chlorine Residual (Section 141.71(b)(1)(iii) and 141.72(a)(3)):***

**Requirements met.** As required, continuous monitoring for free chlorine residual was maintained at the distribution entry points throughout the month and at no time did the concentration fall below 0.2 mg/L for more than four hours. The minimum daily free chlorine residual values for Catskill/Delaware System entry points from site 1S03 (Tunnel 1) was 0.59 mg/L, 1S03A (Tunnel 2) was 0.83 mg/L, and 1S03B (Tunnel 3) was 0.66 mg/L.

The Croton Filtration Plant was online and continuously feeding the Croton Low Service for the month of June. The Croton High Service entry point was offline for July. When the High Service pump is off, distribution Tunnel 3 water intermittently back feeds through the High Service tunnel to the Low Service entry point. The minimum daily free chlorine residual value for Croton entry points from site 1SCL1 (Low Service) was 0.58 mg/L.

#### ***4. Distribution System Disinfection Residuals (Section 141.71(b)(1)(iv) and 141.72(a)(4)):***

**Requirements met.** All free chlorine residuals measured at compliance sites within the distribution system during the month were greater than or equal to 0.01 mg/L.

A total of 1319 distribution samples were tested for free chlorine residual during the month. For all monthly distribution sites free chlorine residual ranged from 0.01 to 1.17 mg/L and averaged 0.59 mg/L.

#### ***5. Trihalomethane Monitoring / HAA5 Monitoring (Section 141.71(b)(6)):***

**Requirements met.** The results for the second quarter of 2021 were included in the report dated June 9, 2021 (for the May 2021 reporting period).

**6. Total Coliform Monitoring (Section 141.71(b)(5)):**

**Requirements met.** The results of monthly coliform monitoring performed in the distribution system are enclosed. A total of 854 compliance samples were tested for total coliform during this period. HPC were all  $\leq 500$  CFU/mL, equivalent to a measurable free chlorine residual. Zero percent of the samples had an undetectable free chlorine residual or HPC  $> 500$  CFU/mL. This meets the requirements that a free chlorine residual be maintained at representative points in the distribution system, and that no more than 5% of the free chlorine residual samples be undetectable in any two months. During the month, ten (10) samples tested positive for total coliform and negative for *E. coli*.

- A sample collected on 7/1/2021 from Site 78850 (sample station opposite 109-36 160 Street, Queens) was positive for total coliform. Resampling on 7/3/2021 was coliform negative at all locations.
- A sample collected on 7/12/2021 from Site 78850 (sample station opposite 109-36 160 Street, Queens) was positive for total coliform. Resampling on 7/14/2021 was coliform negative at all locations.
- A sample collected on 7/14/2021 from Site 36950 (sample station west side Main St. Roosevelt Island, second sample station north of bridge, Manhattan) was positive for total coliform. Resampling on 7/16/2021 was coliform negative at all locations.
- A sample collected on 7/20/2021 from Site 15450 (sample station in front 83 E. Gunhill Rd., Bronx) was positive for total coliform. Resampling on 7/22/2021 was coliform negative at all locations.
- A sample collected on 7/24/2021 from Site 20050 (sample station north side Ave U, first sample station west of E 65th St, Brooklyn) was positive for total coliform. Resampling on 7/26/2021 was coliform negative at all locations.
- A sample collected on 7/24/2021 from Site 29850 (sample station in front of 1425 east side Pennsylvania Ave, Brooklyn) was positive for total coliform. Resampling on 7/26/2021 was coliform negative at all locations.
- A sample collected on 7/25/2021 from Site 21950 (sample station in front of 992 west side Nostrand Ave, Brooklyn) was positive for total coliform. Resampling on 7/27/2021 was coliform negative at all locations.
- A sample collected on 7/25/2021 from Site 25950 (sample station in front of 2187 Flatbush Ave, Brooklyn) was positive for total coliform. Resampling on 7/27/2021 was coliform negative at all locations.
- A sample collected on 7/29/2021 from Site 22550 (sample station in front of P.S. 97 opposite 870-86 Stillwell Ave, Brooklyn) was positive for total coliform. Resampling on 7/31/2021 was coliform negative at all locations.
- A sample collected on 7/31/2021 from Site 41450 (sample station opposite 18-20 Decatur St, Queens) was positive for total coliform. Resampling on 8/2/2021 was coliform negative at all locations.

## OTHER WATER QUALITY MONITORING

### **7. Microbiological Monitoring:**

Coliform monitoring at distribution sites near first service connections, in response to source water having a turbidity >1.49 NTU, was not required this month, but all these samples were negative for total coliform and *E. coli*.

The analyses of 465 distribution Operational samples resulted in eleven (11) samples testing positive for total coliform. No *E. coli* were detected.

The analyses of 248 Pre-Finished samples resulted in nine (9) samples testing positive for total coliform. No *E. coli* were detected.

The analyses of 496 Autosampler Pre-finished samples resulted in nine (9) samples testing positive for total coliform. No *E. coli* were detected.

### **8. Distribution Turbidity Monitoring:**

For distribution sites, turbidity ranged from <0.10 to 4.58 NTU and averaged 0.64 NTU for the month. This meets the MCL of 5 NTU for the monthly average of all distribution samples.

### **9. Color Monitoring:**

The MCL of 15 units for color was met for the month. Daily analyses of entry point samples (124 samples in total), produced monthly average color values of 6 units for sites 1S03 (Tunnel 1) and 1S03A (Tunnel 2), 7 units for site 1S03B (Tunnel 3), and 4 units for site 1SCL1 (Croton Low Service).

### **10. Volatile Organic/TTHM/HAA5 Monitoring:**

**Monthly Results:** Twenty-one (21) distribution and four (4) entry point samples were collected for volatile organic contaminant (VOC) analysis. All VOC samples from distribution sites and entry points were below detection. Twenty-one (21) TTHM distribution samples were collected ranging from 20 µg/L to 62 µg/L. Four (4) TTHM entry point samples were collected ranging from 14 µg/L to 51 µg/L. Twenty-one (21) HAA5 distribution samples were collected ranging from 16 µg/L to 53 µg/L. Four (4) HAA5 entry point samples were collected ranging from 11 µg/L to 36 µg/L.

### **11. Semivolatile and Other Organic Chemicals/parameters:**

Monitoring for Method 505 organohalide pesticides was conducted on July 26, 2021 at three (3) Catskill/Delaware entry points (1S07, 1S03A, and 1S03B), and at the Croton Low Service entry point (1SCL1) and Croton High Service entry point (1SCH3) which represented distribution Catskill/Delaware water. All results were below detection.

Quarterly monitoring for the two compounds 1,2-Dibromo-3-chloropropane and 1,2-Dibromoethane by EPA Method 524.3 SIM, determination of micro extractables, was conducted at the three (3) Catskill/Delaware entry points (1S07, 1S03A, and 1S03B), at the Croton Low Service entry point (1SCL1) and Croton High Service entry point (1SCH3) which represented distribution Catskill/Delaware water, and one (1) distribution sampling site (50250) on July 21, 2021. All sample results were below detection.

*Monthly Water Quality Report – July 2021*

EPA Method 525.3 monitoring for 112 compounds of specified and unspecified organic parameters was conducted on July 19, 2021 at the three (3) Catskill/Delaware entry points (1S07, 1S03A, and 1S03B), at the Croton Low Service entry point (1SCL1) and Croton High Service entry point (1SCH3) which represented distribution Catskill/Delaware water, and six (6) distribution points. All semi-volatile organic contaminant samples were below detection limits.

**12. Fluoride Monitoring:**

Daily analyses of entry point samples (124 samples in total), produced monthly average fluoride levels of 0.71 mg/L for sites 1S03 (Tunnel 1), 1S03A (Tunnel 2), and 1S03B (Tunnel 3), and 0.72 mg/L for site 1SCL1 (Croton Low Service). The fluoride levels at the entry points did not exceed the MCL of 2.2 mg/L at any time during the month.

Please feel free to contact me at (718) 595-5367 or [sfreud@dep.nyc.gov](mailto:sfreud@dep.nyc.gov) if you would like to discuss any of this information in greater detail.

Sincerely,

Salome Freud

Croton Distribution Entry Point Residual Chlorine Continuous Monitoring Results

Note: Continuous monitoring of free chlorine residual (FCR) at distribution entry points was maintained. FCR was maintained at or above 0.2 ppm at all times.  
Since 3/14/21, all grab and online display readings were recorded in Eastern Daylight Saving Time.

\* Free chlorine residual is determined by Hach DPD Method (analyte is not ELAP certified).

\*\* Heterotrophic plate count is determined by method SM 9215 B, PCA medium, 35°C, 48hrs. HPC result ≤ 500 CFU/mL is equivalent to a measurable FCR.

\*\*\* No more than 5 % of FCR samples shall be undetectable in any 2 consecutive months.

† There was no groundwater sample this month because no well was in operation to distribution.

## Analytical Method SM 2120 B. Apparent color.

The average of two consecutive samples from the same site is not to exceed the MCL of 15 color units.

<sup>(a)</sup> Croton System online as of 10/27/20 at 1SCL1.

<sup>(b)</sup> Croton System offline as of 5/28/21 at 1SCH3.
