From the Chief Engineer, boroughs of Manhattan and Richmond, reporting relative to the general depth of covering over the structure of the proposed Rapid Transit Railway route, commencing at a point at the intersection of Broadway and Park Row in Manhattan, and extending to a point at the intersection of Atlantic and Fourth avenues, Brooklyn, where the same passes through park territory.

Commissioner Clausen offered the following:

Whereas, The Board of Rapid Transit Railroad Commissioners for The City of New York, constituted under chapter 4 of the Laws of 1891, as amended, has, on the 24th day of January, 1901, determined upon the routes and general plan of construction for a rapid transit railway for the conveyance and transportation of persons and property, to be established in said city in addition to rapid transit railways already existing therein, commencing at a point at the intersection of Park Row and Broadway, in the Borough of Manhattan, and extending to a point at the

intersection of Atlantic and Fourth avenues, in the Borough of Brooklyn, and has transmitted to the Park Board, being the head of the Department of Parks, in said city, a copy of said plans and conclusions as adopted, showing such routes and general plan of construction, and also Drawings Nos. 1, 2, 3, 4, 5 and 6, adopted by the said Board on the said 24th day of January, 1901, as additionally showing the said routes and general plan of construction; and

Whereas, Such plans and conclusions are as follows:

The centre line of the route shall commence at a point in the Borough of Manhattan at or near the intersection of Broadway with Park Row, being the point of commencement of the Rapid Transit Railroad now under construction upon the routes adopted by the Board of Rapid Transit Railroad Commissioners of The City of New York, by resolutions of the 14th day of January and 4th day of February, 1897; and such centre line shall run thence under Broadway and Bowling Green to State street; thence under State street and Battery Park to Whitehall street, and thence under and across Whitehall street and South street to the East river; thence under the East river to the Borough of Brooklyn at a point in Joralemon street between the East river and Furman street; thence under Joralemon street to Fulton street; thence under Fulton street to Flatbush avenue; thence under Flatbush avenue to a point at or near its intersection with Atlantic avenue. The route shall also include a branch or loop the centre line of which shall begin at the point which shall be found most convenient in Broadway, between Bowling Green and Exchange place, and shall run thence under Broadway to Bowling Green and thence under Bowling Green to State street; thence under and across the line of State street to Battery Park; thence under Battery Park to Whitehall street; thence returning under Whitehall street, Battery Park and State street to Broadway.

The route shall also include suitable tracks and connections in the nature of loops under the City Hall Park and around the City Hall in the Borough of Brooklyn. Wherever the route passes from one street to another, or from the street to the river, or from the river to a street, the route may pass under private property so far as may be convenient for the purposes of the curve or grade of the railway.

The said general plan of construction hereby adopted is as follows:

For the whole of the route above described, including each of the branches and loops aforesaid, two parallel tracks placed on the same level, except that, wherever required by special necessities of surface or subsurface structures, or other special or local necessities, or for the purpose of avoiding grade crossings, either track may be depressed below the other track to a depth of not more than fifty feet; but the limitation as to level of the two tracks shall not apply to the portion of the route under the East river. The tracks shall be standard gauge; that is to say, of a width of four feet eight and one-half inches between the rails.

The tracks may at any point of the route (or of the branches or loops therein included) be placed in the same tunnel; or there may be a separate tunnel for each track, as shall be most convenient; and there shall be a width in the tunnels for each track not exceeding fifteen feet, except that at stations, switches, turnouts, curves and cross-overs the width may be increased; provided, however, that the tracks shall be placed under the central part of the longitudinal street of the route, so far as may be practicable and convenient. No wall of the tunnel or part thereof shall, except at the stations, station approaches, curves, and places of access to subsurface structures as hereinafter provided, be within a distance of five (5) feet of the exterior line or side of a longitudinal street of the route. The roof of the tunnel when under a street shall be as near the surface of the street as grades and street conditions will conveniently permit. The tunnel shall not be less than thirteen feet high in the clear. Wherever necessary to the proper support of a street surface the roof of the tunnel or tunnels shall be of iron or steel girders, with brick or concrete arches, supported by iron or steel columns and masonry walls, or the roof shall be a masonry arch, or the whole of the lining may be of iron. Adjacent tracks shall be connected by necessary and suitable switches and connections and an additional track for siding accommodations may be constructed not to exceed in length one-quarter of a mile for each mile of roadway; and wherever along any part of the route it shall be necessary for the proper maintenance or accommodation of pipes, wires, sewers and other subsurface structures, the width of the tunnel may be enlarged on either or both sides by an additional width not to exceed fifteen feet, provided always that the limits hereinbefore provided as to longitudinal streets of the route shall be observed. All or any pipes, wires, sewers, and other subsurface structures may be placed in suitable galleries to be constructed within the additional width hereinbefore permitted. At each cross street where accommodation for pipes, wires, sewers and other subsurface structures shall be those provided within the tunnel, the tunnel may, in order to provide convenient access to the same, have within the limit of the sides or exterior lines of such cross streets or such lines produced, an additional width on each side of the route not to exceed 15 feet, provided always that the limits hereinbefore provided as to longitudinal streets of the route shall be observed. Pipes, wires, sewers and other subsurface structures shall, at any part of the said route, be removed and disturbed only when necessary for the construction and operation of the tunnel, and if removed or disturbed shall be placed under the streets in such manner and in such location that the use and service thereof shall not be permanently impaired. Such pipes, wires, sewers and other subsurface structures shall be left or shall be so arranged as to give free access for their repair or alteration and for the placing with them, so far as there may be space, of new pipes, wires, sewers, and other like structures, and for making connections between the same and abutting buildings at any time. Stations and station approaches shall, so far as practicable, be at the intersection of streets, and shall be built under streets or through private property to be acquired for the purpose, or both under streets and through private property as aforesaid. The streets under which stations or station approaches shall be built may include cross streets; but no part of any cross street shall be used for a station or station approach at a distance greater than 75 feet from the exterior line or side of the street of the route. The word "street," wherever used herein, shall include an avenue, park, or public place.

The general mode of operation shall be by electricity or some other power not requiring combustion within the tunnels, and the motors shall be capable of moving trains at a speed of not less than forty miles per hour, exclusive of stops. The manner of construction shall be by tunneling or open excavation.

Now, therefore, the said Park Board does hereby approve such plans and conclusions, and does hereby consent to the construction of a rapid transit railway in accordance therewith.

Which were adopted by the following vote:

Ayes—Commissioners Clausen, Moebus, Brower—3.

On motion, at 12 M., the Board adjourned.

WILLIS HOLLY, Secretary.
