ATTACHMENT 5

City of New York Department of Sanitation (DSNY) Environmental Justice (EJ) Informational Meeting

Proposed East 91st Street Converted Marine Transfer Station Pending State Permit Applications

April 19, 2007

Meeting Objectives

- Provide briefing on the proposed East 91st Street Converted Marine Transfer Station (MTS).
- Explain the New York State Department of Environmental Conservation (NYSDEC or State) permit process.
- Explain how you can get comments to DSNY.
- Answer your questions.

EJ Outreach Plan

- EJ Policy calls for a public participation plan (known as a PPP).
- NYSDEC has specifically approved the PPP for the MTS permit processes.
- This meeting is just one element of DSNY's approved PPP.
- DSNY is implementing the same outreach program in each of the four Converted MTS communities.

DSNY Public Participation Plan

- Identifies organizations and individuals (called stakeholders) for outreach efforts.
- Describes written information on the proposed Converted MTS project, includes plans for non-English translations.
- Describes EJ informational meeting to be held to provide information on the project, the NYSDEC permits and the permitting process, includes plans for interpreters.
- Provides public locations where permit documents can be reviewed.
- Describes process to respond to comments from the community (question and answer session, comment period).

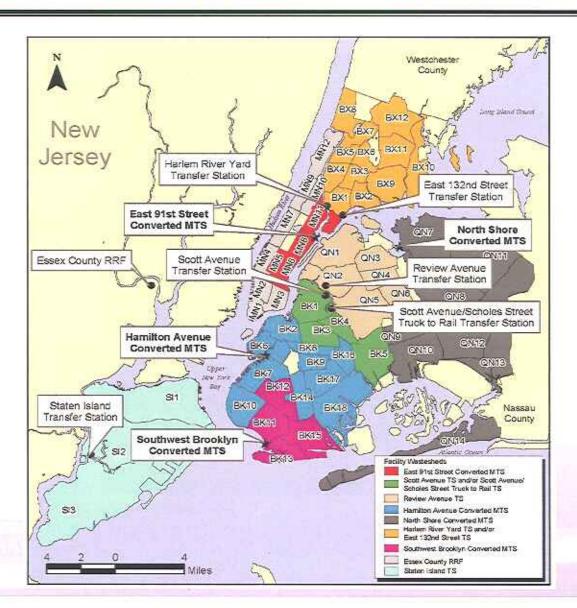

Solid Waste Management Plan (SWMP) Key Dates

- Draft SWMP was issued in October 2004.
- October 2004 Draft Environmental Impact Statement (EIS) evaluated potential for significant adverse impact of Converted MTS Projects.
- April 2005 Final EIS responded to public comments and determined there were no potentially significant adverse impacts from construction or operation of the proposed Converted MTS Projects.

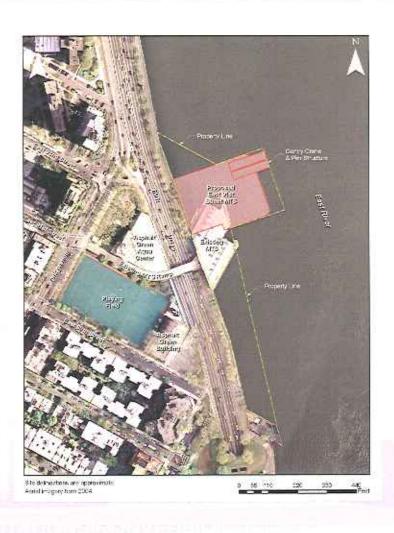

Solid Waste Management Plan Key Dates (Continued)

- City Planning Commission approved East 91st Street Converted MTS Uniform Land Use Review Procedure siting action in April 2005.
- City Council adopted SWMP in July 2006.
- NYSDEC approved SWMP in October 2006.

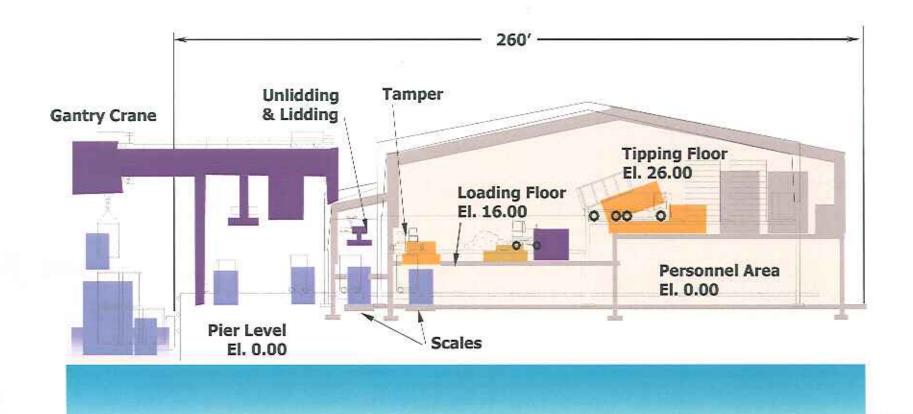

DSNY- managed Waste: Long Term Export Facilities and Wastesheds

Site Plan

Typical Proposed MTS Cross Section

All elevations are relative to Pier Level.

Typical Proposed MTS Floor Plan

Proposed East 91st Street Converted MTS: Capacity

- Same historic wasteshed as existing MTS (720 average tons per day) from Manhattan Collection Districts 5, 6, 8 and 11.
- Expected average daily throughput is 720 tons of DSNY waste and up to 780 tons of commercial waste.
- Not-to-exceed permit limits are proposed on a Weekly and Maximum Peak Day basis.
- Proposed Weekly Limit is 9,864 tons.
- 20% allowance is included for seasonal variability, growth in waste generation and system redundancy.
- Proposed Maximum Peak Day Limit is 1,860 tons.
- Maximum Peak Day Limit addresses DSNY post-holiday collections.
- Old MTS operating permit allowed for 4,800 tons per day.

Key Proposed MTS Features

- All waste processed in enclosed building that maintains negative air pressure to prevent escape of odors.
- Treatment system neutralizes (not masks) odor in building exhaust air.
- All waste leaves MTS in sealed, leak-proof containers.
- FEIS found no significant adverse impacts from MTS construction or operation.

Acceptance of Commercial Waste

 To avoid noise impacts, Commercial Waste would be limited to 780 tons (71 trucks) over the 12-hour, 8:00 p.m. to 8:00 a.m. shift.

Proposed MTS Permit Status

- DSNY has submitted Permit Applications to NYSDEC for:
 - Part 360, Solid Waste Facility Permit;
 - Part 608/681 Marine Permits (construction in public waters/protection of public waters) and Section 401 Water Quality Certification; and
 - Part 201 State Facility Air Permit (minor source).

Proposed MTS Permit Status (Continued)

 The public is invited to review the Permit Applications at DSNY's website at

http://www.nyc.gov/html/dsny/html/reports/guides.shtml, and at two public locations in your community:

Manhattan CB 8 Office	505 Park Avenue, Manhattan
Elizabeth McKee	M-F 9 to 5; (212/ 758-4340)
96 th Street Library, Bill	112 East 96 th Street, Manhattan
Seufert (212/289-0908)	M/Th 12-8; Tu/F 1-6; W 10-4; Sa 10-5

Part 360 Solid Waste Facility Permit

- Required to construct and operate the proposed MTS.
- The Engineering Report in the Permit Application defines the Permit requirements.
- The draft permit imposes conditions on construction and operation consistent with Part 360 regulations.

Part 608/661 Marine Permits and Section 401 Water Quality Certification

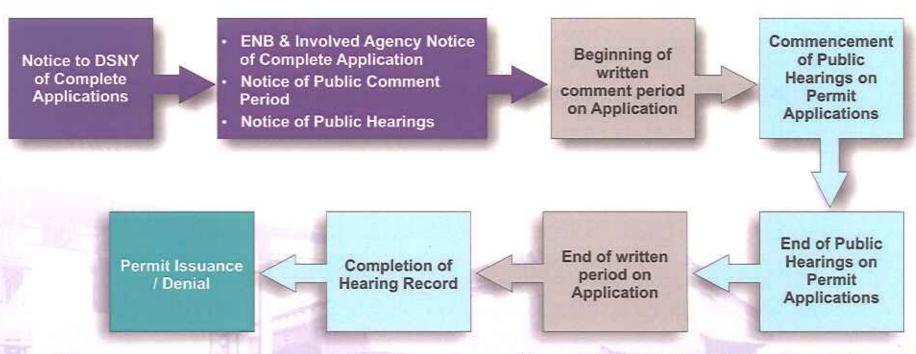

Required for:

- In-water construction to remove existing access ramp and platform, construction of new ramp and platform, bulkhead reconstruction, and barge fendering system; and
- Dredging proposed to be conducted using protective environmental method to enable barge transport operations.

Part 201: State Facility Air Permit

 This permit establishes the facility as a minor source of air emissions. Emissions result from equipment used at the proposed MTS.

Flow Sheet on NYSDEC Permit Process

For questions concerning the NYSDEC Permit Process please call Michelle Moore, NYSDEC Environmental Analyst, at (718) 482-4997

How Will My Comments at this EJ Meeting Be Addressed?

- Transcript of this meeting will be forwarded to NYSDEC for consideration.
- A response to all written comments received at the EJ meeting or by DSNY by April 30, 2007 will be part of the PPP certification record available on the DSNY web site at http://www.nyc.gov/html/dsny/html/reports/guides.shtml and in the public repositories.
 Mail your comments to Harry Szarpanski at DSNY, 44 Beaver Street, 12th Floor, NY, NY 10004 or fax your comments to 212 / 269 - 0788.

Question and Answer Session

Open the floor to discussion.

BACKGROUND INFORMATION

SWMP Long Term Export Goals

- End use of long-haul trucks for waste transport.
- Stabilize waste disposal costs.
- More fairly site waste transfer facilities among the City's boroughs.
- Containerize waste to achieve flexible transport and disposal options.

SWMP Long Term Export Initiatives

- Use private transfer stations to rail containerized waste from the Bronx, North Brooklyn and part of Queens.
- Open (December 2006) the Staten Island TS for transport/disposal of that borough's containerized waste.
- Enter into a long-term agreement for disposal of part of Manhattan's waste at the Essex County Resource Recovery Facility in Newark, NJ.
- Move forward to obtain permits to construct the East 91st Street, North Shore, Hamilton Avenue and Southwest Brooklyn Converted MTSs.

SWMP Recycling Goals

- Stabilize long-term costs of the Curbside Program.
- Meet a 25% recycling goal for DSNY Curbside Program.
- Meet a 35% recycling goal for entire DSNY-managed Waste stream.

SWMP Recycling Initiatives

- Enter into a 20-year contract for metal, glass and plastic (MGP) at a processing facility to be built at the South Brooklyn Marine Terminal.
- Enhance composting and waste prevention programs.
- Develop an electronics recycling program.
- Establish a recycling education and acceptance facility for the Curbside Program, potentially at the Gansevoort Peninsula or at an alternative Manhattan site.

Manhattan Recycling

- July 2004: weekly MGP and paper collection is restored.
- Sims Hugo Neu to develop a city-wide recycling processing facility on City property at the 30th Street Pier in South Brooklyn Marine Terminal.
- Full funding is reinstated for composting outreach through the Lower East Side Ecology Center.

SWMP Commercial Waste

- Export some Commercial Waste from 4 Converted MTSs.
- Expand rail export of Commercial Waste from DSNYcontracted private transfer stations.
- Promulgated new regulations that reduce noise, odor and dust at private waste transfer stations.
- Issued RFP in January 2007 offering West 59th Street MTS in Manhattan for Commercial Waste export.
- Limited new siting or expansion of transfer stations in communities where they are concentrated.
- Study how to lessen waste transport on truck routes that affect residential areas.

comments tonight and we will make that part of the record. There's a microphone on each side of the aisle so as I call your number, the next person please come and stand at the mike so that we don't waste time.

1.0

Hopefully we can answer all the questions you have either us up here or with the assistance of our consultants. And if for some reason we can't answer your questions tonight, we will answer them at a future date. We're going to have a transcript that includes the questions and answers.

And there are several elected officials or their representatives here. We're going to allow them to go first when it comes time to make comments so that they can attend any other meetings that they have scheduled.

I'll start the PowerPoint presentation.

(Showing PowerPoint.)

MR. SZARPANSKI: A little about the objectives here. And I'm not going to read everything. You have a copy of it. I'm sure you don't want to hear me speak, you want to give us Waste Management plan.

The SWMP was issued -- a Draft of that SWMP was issued in October of '04. We also did a Draft Environmental Impact Statement. In April of '05 we issued the Final EIS. And the conclusions were that there would be no potentially significant adverse impacts from the construction or operation of these four facilities.

City Planning approved this facility as part of the ULURP process. The City Council then adopted the Solid Waste Management plan, including this facility, in July of '06. And the DEC, State DEC approved the plan in October of '06.

It may be hard for you to see this.

This is a map of the City showing which community boards, which board's waste will go to each of the facilities being planned.

You can see the East 91st Street wasteshed in the red in Manhattan and you can see it's fairly small compared to the other wastesheds.

This is a site plan which shows

your questions and comments.

Basically we're here to talk to you and answer your questions about this particular project. We're going to talk about what the DEC's permit process is. We'll explain also how you can get comments to us.

This is part of an EJ, Environmental Justice outreach plan. EJ requires a Public Participation Plan to be prepared, which we did. It's on our web site if you want a copy of it.

The DEC reviewed and approved the Public Participation Plan. This meeting is just one of the elements of the required plan.

The plan itself identifies stakeholders and describes the outreach that we plan to do. It talks about the various EJ informational meetings that we have held.

There are four marine transfer stations that are going to go into the permitting process and the other three EJ meetings took place this week and last week. This is the fourth of the series.

Okay. Next slide, please.
A little background on the Solid

where the facility it is to be located.

Next.

Just to walk you through how the facility will operate.

Trucks will be entering through these roll-up doors. They'll be backing up and dumping from the tipping floor down to the loading floor. Front-end loaders will then push the waste into four openings in the floor. Under those openings containers will be sitting there.

The waste then will be tamped and all of this occurs within the enclosed building. Once the container is sealed, the containers then slide out and a gantry crane lifts the containers and puts them onto a barge.

This is the floor plan showing the same thing. The trucks come over a scale. They back up. They tip. Waste goes on the loading floor. Here you can see the gantry crane loading the barges.

One of the key elements of this facility and the other marine transfer stations is that the same wastesheds that existed before when the marine transfer station was operating and

13 1 15 1 available at Community Board #8's office and the 2 2 waste was going to Fresh Kills, the same 3 library at 96th Street. 3 wastesheds will feed this facility. 4 The next three slides just provide Those collection districts are 5, 6, 4 5 more information about each of those permits. I'm 8 and 11. The expected average daily throughput 5 6 of this facility is 720 tons a day of Department 6 not going to go into detail. 7 Okay. 7 managed waste and up to 780 tons a day of 8 In terms of the process itself, we 8 commercial waste. The permit will have a 9 are right now just before this first box here. 9 not-to-exceed limit both on a daily basis and on a 10 The next thing that will happen is the State DEC weekly basis. 10 11 The old marine transfer station was 11 will finish reviewing our permit applications and then hopefully the permit application is complete. 12 12 permitted at 4,800 tons per day. 13 Once that happens, the Environmental Some of the key features of the 13 proposed facility. 14 News Bulletin will have a notice that the permit 14 15 is complete. It will also tell you where you can All waste is going to be processed 15 provide comments and it will also disclose where inside the building. The building will be under 16 16 negative air pressure to prevent odors from coming 17 the public hearings that the State will hold will 17 18 out. There will be a system that neutralizes 18 odors rather than masks them. 19 Starting with that notice, people 19 20 can then submit comments. The State then holds the 20 The waste will then leave the MTS in public hearing. At some point the State DEC will 21 sealed, leak-proof containers. And as I mentioned, 21 22 complete the hearing record and either issue or 22 the results of the Final EIS found no significant 23 deny the permit. 23 impacts from this facility. 24 The person, if anyone wants more 24 With respect to commercial waste, 25 details on the State permitting process, the 25 the amount of commercial waste was determined --14 16 1 16 1 14 2 person's name to contact is Michelle Moore and her that can go to the facility was determined based 2 3 on limiting it to 780 tons a day based on avoiding 3 number is below. 4 Next. noise impacts. 4 5 We will have a transcript of this 5 (Audience participation.) 6 public meeting sent to the DEC. We ask that you 6 MR. SZARPANSKI: Next. 7 provide any comments that you have to us by April 7 (Audience participation.) 8 30th. My address is there. You can send comments 8 MR. SZARPANSKI: Excuse me. 9 to me. You can also fax your comments at the You'll have a chance to speak when your turn 9 10 comes. 10 number listed there. 11 And at this point I'm going to open 11 (Audience participation.) MR. SZARPANSKI: The proposed 12 it up to people who sign up to speak starting with 12 permit status, the Department submitted the permit elected officials. 13 13 Okay. We have Councilmember Daniel 14 14 to the -- three permits actually, to the State 15 Garodníck. DEC. 15 16 You might have to turn the mike on. There's what's called a Part 360 16 Permit which deals with the solid waste aspects of 17 (Applause.) 17 18 COUNCILMEMBER GARODNICK: How is the facility; 18 that? Is that on? 19 The 608-661 Permit deals with marine 19 20 Good evening. Good evening, 20 issues; and A Part 201 Permit is a State 21 everybody. 21 22 My name is Dan Garodnick and I Facility Air Permit for a minor source. 22 represent the Fourth Council District going from 23 23 If anyone wants to look at the 24 actual permits themselves - they're huge documents 24 14th to 97th Street on the East Side. - they're available on our web page. They're also 25 I do not represent the specific area 25

18

24

traffic.

morning. That's 71 trucks and 780 tons.

Now, for me that does not speak to

COUNCILMEMBER GARODNICK: And so

the concerns about noise. It does not address the

issues of smell. It does not address the issues of

the rodents. It does not address the issue of the

(Audience participation.)

time was as part of the ULURP process. So we have addressed many of the issues, maybe not to the satisfaction of the community. (Audience participation.) MR, SZARPANSKI: Excuse me. Excuse me. And we had an Environmental Impact Statement that reviewed all of the issues of concern. So it's not as if we're ignoring these issues. They have been addressed. VOICES: Answer the question. There's no answer. MR. SZARPANSKI: Okay. (Audience participation.) A VOICE: Where is this thing if we want to look at it? MR, SZARPANSKI: Did I call you as a speaker? A VOICE: No, but I'm asking --MR. SZARPANSKI: I'm sorry. The Environmental Impact is on our web page. MR. SZARPANSKI: We have the next speaker. We have Jackie Ludorf representing

know now that two major buildings are going to be built on 86th Street which is really one of the routes for the trucks to come down. I think that you really have to look at that site again to see how congested things are between 9:00 and 5:00.

Those buildings will have deliveries. Those buildings, you know, will have people coming in and out and I think they'll . increase the congestion.

The other thing is is that the Second Avenue Subway we know now is going forward. That definitely will have an impact on First Avenue and York Avenue traffic.

This second item that we had was that the new MTS will have a capacity of 4,290 to 5,280 tons a day, which is four times the capacity that was handled by the former MTS. Now, you addressed that and you have addressed that on several occasions. And we appreciate your answer that you said this is for emergency use only, if there's a blizzard or if there's a hurricane and that's fine and good.

But we're concerned. What about if one of the other MTSs aren't built? Does that not

Community Board #8.

(Applause.)

MS. JACKIE LUDORF: I was actually reminding everybody that on January 12 --

VOICES: Use the mike.

MS. JACKIE LUDORF: Oh, I'm sorry.

I'd like to remind everybody that on January 12, 2005 the Land Use Committee meeting of Community Board #8 made the following resolution with a vote of 31 in favor, zero opposed and four abstentions.

abstentions.And that vote was that Community .

Board #8 opposes the selection of the East 91st Street site for the construction of a new MTS based on the following: Now, I won't go through all of the following but some of the things have really increased in import since January 2005.

And one comment was the proposed site is located in the middle of a densely populated residential neighborhood. That was true then. It's more true now.

I think on a monthly, yearly basis you can see the density of our neighborhood around 91st Street growing. We recently have found -- we create a crisis situation. Does that create an emergency. And we know that there are some problems with some of the MTSs on the West Side and the Hudson River special district.

The other thing is that the Mayor has said that in the next 30 years he would like -- he projects another million people in the City of New York. Obviously that's not all in our district, but will it have an impact without really an emergency situation. So we're really concerned that this extra capacity, once it's built, will be used not just for an emergency but sooner.

The other thing that really bothers us is that we have never seen a cost benefit analysis. It's kind of amazing to me in the City of New York we don't know the benefit of this. We say it will save money, but we've never seen --

(Applause.)

MS. JACKIE LUDORF: We've never seen any hard numbers.

Now, at the very first meeting that you -- that DOS held, probably in 2003, November, December, one of the comments that was made is

10.

that this site is being used because you don't want to buy any new property. And I propose to you that's really why this site is being used.

Why there's been no alternative analysis, why there's been no cost benefit analysis is because you don't want to buy new property. We feel that there is other property, we don't know where, that could be brought that would answer a lot of the City's problems for these issues, but that hasn't been done.

And lastly I would just like to tell you about our neighborhood. Yes, our neighborhood does have some, you know, people would have just moved into the neighborhood who have bought multimillion dollar apartments. It also has a low income population at Stanley Isaacs on First Avenue across from the MTS.

But most of the population in the 91st Street district is composed of middle class people who have been living here for thirty or forty years who have probably rents of \$600 to \$1,200 a year because they live in rent control, rent stabilized houses or they bought their co-op so many years ago.

consequence of the Mayor's review shortly after he came into office and the progress the City had made in implementing its previous Solid Waste Management plan. It did not spring out of nowhere.

The Mayor found the plan, that we were pursuing at that time in 2002, wanting and that it really hadn't moved anywhere and would have left us under the control of one particular vendor.

Hence, he decided that we should pursue one of the alternatives to that plan which was actually analyzed in the EIS of the former Solid Waste Management plan, which was transforming our existing marine transfer system into facilities at which waste could be containerized so that it could be exported to any number of locations, was made ready to go.

To great public acclaim, in the middle of 2002, the Mayor announced that plan and directed us to go forward and try to implement it. It was supported by Council Members. It was supported by State people also at that time.

The Department, in accordance with

So that I think we have to be careful when we say this is really a high net-worth district. It's really a middle class district and a lower class district with some higher income people living in it.

That's my comments.

Thank you.

(Applause.)

MR. SZARPANSKI: Thank you.

Just a couple of points.

With respect to the cost benefit analysis, we did make a presentation to the City council that disclosed the cost of this program versus other alternatives that we looked at. So we can make available to you that PowerPoint presentation if you'd like.

I want to hand it over to Walter Czwartacky to talk about what alternative sites we looked at.

20 looked at.
21 MR. WALTER CZWARTACKY: This
22 proposed project is a consequence of -23 VOICES: Louder.

MR. WALTER CZWARTACKY: It's on.
This proposed project is a

environmental review and just good planning practices, began to develop designs for converting or changing over all eight of the City MTSs into facilities at which waste could be containerized.

Concurrently we looked at alternatives. We looked at alternatives that would involve, not doing certain MTSs, but perhaps depending on certain existing facilities and leveraging City investments to create, out of private facilities, places where waste could be containerized and exported by barge or rail, getting it out of trucks.

We also, with great -- well, we made a great effort to pursue a response to a very unrequitable situation that had grown up upon the closure of Fresh Kills, which was the City depended inordinately on certain -- two or three neighborhoods for the export of its waste.

As a result of those efforts we actually decided that we didn't need to convert or change over all eight MTSs, that we really only could -- needed to do four.

In the Bronx we decided that the existing facilities there could be relied upon to

export waste by rail.

In Queens -- in Brooklyn, instead of a facility at Greenpoint, one facility at Greenpoint, we found various private facilities with whom we could contract and they would instead of exporting by truck, convert to exporting by rail.

For Manhattan we determined that the exiting situation which exists for a significant portion of the borough where collection trucks go to Jersey and use the waste and energy facility, should be sustained. Now, once that was decided, that left us with a decision as to what waste should go where in Manhattan.

We looked at the 135th Street area and we said, gee, that neighborhood already has got the sewage treatment plant, which is one of the largest in the world, and two bus depots.

We looked down at 59th Street which was in the Hudson River Park and by virtue of its odd design really couldn't be efficiently or cost effectively converted.

And we realized that 91st Street was the MTS left in Manhattan that made the most sense

sites, the other sites, one at 140th Street, one
at West 30th, were suggested to us because there
was rail nearby. The rail that's nearby is used
for passenger rail. The track size, tunnel sizes
and so on just really, they don't fit, plus
they're really too small to fit in the size
facility that we need.

MR. SZARPANSKI: We have a representative of another elected official. Jane Swanson is here representing Councilmember Jessica Lappin.

(Applause.)

MS. JANE SWANSON: Good evening. Is this on? Yes.

I'm sorry the Councilmember cannot be here tonight. She is on maternity leave having given birth on March 4th to a baby boy.

(Applause.)

MS. JANE SWANSON: I will read a statement on her behalf.

Excuse me. I'll ready quickly because I'd like to give others the opportunity -- since she isn't here tonight, give the others the opportunity to ask questions.

and would yield us the superior project.

Additionally, it would prevent DSNY waste in Manhattan from driving from one wasteshed through another wasteshed to exit the Borough.

Concurrently with that we also, as a consequence of the adoption in 2000 of the old Solid Waste Management plan, did a study of Manhattan sites, four sites in particular. One up at 140th Street, one at Pier 42 on the Lower East Side, one at 30th Street and the Gansevoort MTS, which is in the Hudson River Park.

Three of those sites for technical reasons, size, lack of access to rail, lack of access to water we could use, were by no means superior to 91st Street. The last one, Gansevoort, in fact, became a component of the plan and we're now pursuing turning that into a place for the export of recyclable material.

A VOICE: We have access to rail on 91st Street?

MR. WALTER CZWARTACKY: You have -you have access -- you have access to water on
which we can put -- bring barges to put containers
onto move them to rail. We don't -- the three

This is Councilmember Lapin's statement.

I appreciate the opportunity to comment on the Bloomberg administration's ill-conceived proposal to reopen and expand the marine transfer station at East 91st Street as part of the City's 20-year Solid Waste Management plan.

I voted against the Mayor's SWMP because it includes reopening this station. I voted against the SWMP even though I believe we need to use barges to get garbage off our streets and transport more of our waste by barge and rail. But doing so at the expense and the health and safety of the surrounding community is irresponsible public policy.

The marine transfer station proposed for 91st Street has the capacity, the capacity to process 5,280 tons of waste per day, as Jackie mentioned, and is scheduled to operate 24 hours a day, six days a week.

The air pollution, traffic and noise from this operation will be constant. It is ridiculous that the Environmental Impact Statement

35 1 33 1 2 stated that there will be no significant impacts 2 MR. SZARPANSKI: Are there any 3 3 on the community. other elected officials here? 4 (Audience participation.) 4 A marine transfer station clearly 5 MR. SZARPANSKI: Please. 5 belongs anywhere but in the heart of a densely populated residential neighborhood. Yet that is 6 A VOICE: Answer the question. 6 7 MR. SZARPANSKI: It's a rhetorical 7 exactly what the administration proposes to put it 8 question. You know it as well as I do. 8 9 (Audience participation.) 9 (Audience participation.) MR. ROBERT ORLIN: There are 10 MS. JANE SWANSON: It will be a 10 11 limited places in certain areas in this City to 11 mere 300 feet away from residents. According to place --12 the last census, approximately 1,400 children live 12 within five blocks of the site and 2,200 residents 13 A VOICE: Answer the question. 13 MR. ROBERT ORLIN: Give me -live in public housing just a stone's throw from 14 14 (Audience participation.) 15 the proposed site. 15 16 MR. ROBERT ORLIN: I mean -- I need 16 The marine transfer station will to give background, please. I'll answer the 17 17 devastate Asphalt Green, a park and residential question. Don't shout out, please. facility which sees 675,000 visits a year and over 18 18 There are various areas of the City 19 20,000 public school children have been taught to 19 that have transfer stations close, as close as 20 20 swim at no cost. 21 this facility is to residential districts. There 21 The proposed marine transfer station 22 are three facilities in Jamaica, Queens all within 22 places that wonderful experience at risk. The 400 feet of residential districts. I understand that our Mayor wishes Manhattanites to take care of our own garbage. Let me remind all of you, been there done that. When we were doing it, our park was infested with rats as big as dogs. York Avenue was double parked with garbage trucks from 91st Street to 86th Street.

(Audience participation.)

MS. MONICA PLIMACK: My son actually attended Asphalt Green summer camp for two years. Many were the days when the smell of the trucks were so strong that they were we forced to go back home and many other days that summer camp was held indoors, especially in the mornings.

You've been trying to explain to us that this is our garbage. I'm here to tell you that if you're trucking this garbage across town, then it's not our garbage.

(Applause.)

MS. MONICA PLIMACK: These few blocks cannot possibly engender garbage of such magnitude that we need 24/7 salaries to get rid of it. What we need 24/6 is the creative, innovative minds that can come up with reasonable solutions. 40

MR. WALTER CZWARTACKY: At previous meetings and in smaller sessions, we've acknowledged that the previous facility did, in fact, cause great queues on the ramp and not on the ramp, but down York Avenue.

It had to do, in part, with the design of the facility which could not handle the peak hour because the tipping floor was too small. It also had to do with the condition of the ramp which could not support the trucks when they came to queue.

Finally, the worst conditions, which occurred in the mid 80's, were a consequence of the fact that we were A, rehabbing the facility and narrowed the ramp down to one lane, which created a tremendous problem and shortly thereafter had to narrow the ramp down to one lane again, when they were building the aqua center. So the worst situations here, and they were the worst when trucks backed up all the way down York, were consequences of those two circumstances.

The facility we're building now would be able to queue trucks on the ramp instead of on York Avenue. Also, we'll have a tipping

41 43 1 1 2 2 property line, but for most important, for air floor that can process up to thirty trucks an 3 hour, which exceeds what we believe to be the peak 3 quality pollution they decided to move it to the hour arrival rate for trucks and what we plan on 4 center of the MTS? 5 5 it being. That's discussed in the permit These changes are no different than 6 6 documents. That's also discussed in the EIS. a drug company that hides detrimental data from 7 MR. SZARPANSKI: Thank you. 7 the public. And this is clearly distorting the truth to try and steamroll the MTS to go into our 8 8 Our next speaker is Doctor Clifford Bluestein. 9 9 10 DR. It is our professional opinion that 17 always the opinion of the authors, report no 17 reopening the 91st Street Marine Transfer Station impact, this conclusion has been based upon 18 will create an unavoidable and disastrous public 18 19 19 research methods that were altered to distort the health crises. 20 20 Scientific studies prove that truth. 21 First of all - and I quote from facilities like the one proposed creates serious 21 22 their own impact study. 22 short and long term health problems such as 23 The off site air quality analysis of 23 chronic bronchitis, asthma, cardiac arrhythmia, 24 decreased lung function and premature death. Older 24 processing DSNY managed waste at some of the 25 converted MTS sites show that using the 25 adults and young children are particularly 42 44 1 42 1 2 2 vulnerable to these health risks. conservative assumption that peak hour conditions 3 occur 24 hours per day under Tier I analysis 3 As elected officials, we ask all that is within your power to ensure that the Final 4 resulted in unmitigatable environmental impacts 4 5 Solid Waste Management plan does not include the 5 for particulate matter less than ten microns and 6 less than two-and-a-half microns in diameter. 6 91st Street Marine Transfer Station. 7 7 In order to mitigate those things (Audience participation.) they decided to create a Tier II which is 8 MR. SZARPANSKI: Joyce Mariani with 8 9 different than what they should have done, so they HDR will answer some of your questions. 9 10 MS. JOYCE MARIANI: To respond to 10 are able to mitigate their effects by creating a 11 your first point about Tier I versus a Tier II 11 whole new analysis. Number two, for the most important 12 mobile air quality analysis. 12 13 A Tier I air quality analysis is a 13 measure of pollution, the PM2.5 analysis, I say quote, incremental concentrations contributed by 14 standard way to actually do any air quality 14 15 traffic related to the proposed facilities were 15 analysis in the City of New York, which actually 16 does over-predict what the potential effects would 16 modeled by not adding to the background levels. 17 So instead of adding the additional be to air quality from all of the trucks traveling 17 18 pollution from the garbage trucks, they created 18 to and from the facility. some modeling system which somehow mitigates the 19 And I say over-predict because I 19 20 pollution. mean that it takes the peak hour number of 20 Third, for the measurement of PM2.5 21 21 vehicles, which at this facility is estimated to alone, the location of the measurement was changed 22. be about 28 or 29 trucks, and assumes that that 22 23 many trucks will come there every hour of the day 23 from the property line to the center of the MTS. 24 24 Now, why was it that for all the for 24 hours. And that's not the case here.

25

other measurements of pollution they used the

It will not be that high during any

other hour of operation of the facility. So it's over-predicting it because you will not see 29 trucks per hour for 24 hours per day. And you do that because if you find that you're okay with that number of trucks from an air quality standpoint, then your over-prediction shows that you'll be okay.

What we found when we did that over-prediction was that we had to go second level and look at the actual distribution of the vehicles that would be expected to arrive at this facility, not on your average day even. An average day would be 700 tons or so from DSNY managed waste. We looked at the peak day that happens to occur once per week.

Every Tuesday you might see a day -every Tuesday or Monday you would see a day when
you'll have 20 or 25 percent higher waste coming
from the facility after a weekend. The rest of
the week that average number drops much lower.

So we did take that peak Tuesday analysis and looked at the actual truck distribution, which is a Tier II analysis, to determine whether we would have a potential

that you can add your impact to.

So we did, in accordance with the standard, accepted practice, and so the incremental analysis showed we were below what the DEP has determined as the standard for the incremental PM2.5 allowable increase for any project in the City.

I think there was another question of the property line on the center of the MTS. I wasn't too clear on what the question was.

But in terms of the on-site analysis, and this is for air quality, noise and odors, we looked at these facilities operating, and in 91st Street, all of the equipment operating on the site and the maximum number of trucks queuing on the site.

Again, we did this conservatively. We said let's assume 17 or 19 trucks are queuing on this site all the time. All the equipment is operating, the cranes are running, the redundant equipment is operating the facility, we call it the biggest bread box, to see if we have a potential impact.

Because if we start there and

impact.

1.

So it really is a very standard method. You'd see that probably done in any facility or for any facility or any transportation analysis for that matter.

Your second point on the incremental PM2.5 analysis.

Most air quality standards do have a requirement that you look at the background levels of a pollutant in your area and you add your facilities' impact to the background and you compare it to standards which are national standards across the industry.

PM2.5 does not have that because New York City, in fact, has levels of PM2.5 that are monitored that are indicating that we would be in exceedance of a background standard, if I'm stating this correctly, Joel.

So the DEP and New York City came up with a method that is used for all projects, again, that says you must look at the increment of your facility because this is done for power plants around the country. You look at an increment when you don't have a background level

there's a problem, we then would reduce it to see what's a more refined analysis, which is the actual operations. So I'm not sure if your question was that we moved something to the center.

DR. CLIFFORD BLUESTEIN: A couple of things.

First, for the first point. Your tiered analysis, I understand why you did it, but you're looking at it from the basis of your assumption that you're only getting 130-some trucks a day. The reality is this has the capacity of over 400 trucks a day. So we don't -- so when this is run at capacity, there will be clear environmental impacts, clearly, okay. That's based upon your own analysis.

When it comes to the number of trucks queuing that you did your analysis, you analyzed one truck in queue for your analysis.

MS. JOYCE MARIANI: The one truck was on the outbound scale. We had the remaining 16 trucks queuing on the ramp towards the inbound scale as well.

DR. CLIFFORD BLUESTEIN: We're in

б

the building.

ブ

MS. JOYCE MARIANI: No. And we also had trucks operating in the building. And one of the things that is a benefit of a project, that I'm not sure was mentioned, was the louvered fence that would be constructed on either side of the ramp which actually does help, and the Department did as a measure to help improve the shielding from potential noise effects, as well as the air quality on the project.

(Audience participation.)

MR. SZARPANSKI: Walter, you had something to add.

MR. WALTER CZWARTACKY: We're probably going to hear a lot more questions about this before the end of the night, and it's this issue of the capacity of the facility and what is the capacity of the facility.

You probably -- a lot of you probably own cars. And your car has the capacity to go a hundred miles an hour or ninety miles an hour. And when you need to, it's there and you can do it.

This facility has the capacity to

we have the ability to declare an emergency and operate this facility at that rate to protect the public health and safety and get the garbage off the street, which this City has done with its old MTSs in the past.

Now, the last thing. The facility that's there now is permitted at 4,800 ton per day, everyday, six days a week. That's 24,000 tons.

A VOICE: Doesn't make it right.
MR. SZARPANSKI: Thank you.
Our next speaker is Tony Ard.
(Applause.)

MR. TONY ARD: Thank you,

Commissioner.

As you know, I'm the President of the Gracie Point Community Council.

The GPPC is a neighborhood coalition. It's composed of citizens, many of whom, all of them are here tonight. They are here tonight as part of our group.

Business people, corporations, institutions are united by a common concern that what you propose to do threatens the quality of

process 5,200 tons of waste 24 hours if we run it to the wall. But it has that capacity because certain peak hour demands dictate that we run at that rate.

If you look at the permit document, which are on display in the back room, you will find what we want to permit this facility for is 9,864 tons per week. Divide that number by six, that's the amount of waste that's likely to go to that facility on average everyday.

(Audience participation.)

MR. WALTER CZWARTACKY: Let me

finish, please. Let me finish, please.

All right. If there's a holiday during the week and we only have five days to deliver what everybody generates in six, we will have a peak day. We will exceed the average on that day. And because that facility has that extra capacity, that ability to process it, we'll be able do that without trucks queuing on York Avenue.

If there's an emergency in the City where we haven't collected garbage in a week because of snow or some other kind of emergency,

life and health of those who live in this vicinity.

You have heard and will hear more tonight, on why and how we're concerned. Such as, as, for example, the closest residential complex to the proposed plant is the Stanley Isaacs/John Holmes public housing complex who are represented here tonight.

You will hear that -- from others that there are concerns about pedestrian and vehicular traffic that we experience in real life is far more intense then your models predict.

And finally, you'll hear the concern over the lack of evidence, convincing evidence that the devices or procedures that you propose to deploy to mitigate the odors, the vermin, the rats and so on, will work as you've promised. There's been no evidence.

What are these devices? How will they work? Have they been tested? Have they been tested at the capacity that's proposed to be used at the station and so on?

Furthermore, we have concerns about the substances you propose to use to neutralize

53

I'd like to cover the focus of the larger issues, and that is it's my belief that while -- that you've failed to comply with the fundamental responsibility to consider the cumulative impact of all actions being approved and funded by the agency.

Specifically, you've not considered the cumulative impact of a proposed marine transfer station with the impacts of all of the current and proposed new Department garages and the re-working of the traffic patterns associated with that.

There are a number of new garages that are being proposed. The garage projects have not been considered together in a comprehensive manner nor have they been considered in conjunction with the cumulative analysis of all the new garages.

One last point, if I may, please.

opportunity to address questions with regard to those areas, the major point I was trying to make is that the cumulative effect of all the things the Sanitation Department is proposing and planning, that is, the transfer station plus the garages plus the changes in traffic, that those things together have not been submitted to the kind of analysis that gives you a true view of the environmental impact.

(Applause.)

MR. ROBERT ORLIN: Other projects that the Department has undertaken will undergo separate environmental review.

I mean the only project that I'm aware of that's in this community right now is that the garage at East 73rd Street is going to be rehabbed and reconstructed so that it can better handle the Department trucks there. It's East 73rd Street by the River.

So it already exists and it's just going to made a more up-to-date facility. It's been there for 60 years and needs to be reconstructed so that it can handle -- better handle and better serve the community.

56

55

54

We're concerned that if you are not able to conclude an arrangement on the West 59th Street station, that there's no consideration of the impact of that and that that waste, which you cannot or may not be able to bring to that station, will have to flow here because we're the only other place in Manhattan to go. And this Environmental Impact Statement does not consider that possibility.

(Applause.)

MR. SZARPANSKI: Thank you for your comments.

> Kathryn Edmunds? (No response.)

> > VOICES: There's no response.

Answer the question, please.

MS. SZARPANSKI: I think Mr. Ard was just pointing out some issues that he has concerns about that other people will likely bring up; is that correct?

VOICES: Answer the question. There's bigger issues.

23 24

MR, TONY ARD: While I did specifically mention that there will be further

A VOICE: What about subway construction, Second Avenue Subway?

MR. ROBERT ORLIN: Well, I mean the environmental review was done. It was completed last year. We took into account -- and Joyce can speak to this better than I can, it took account everything that we were aware of at that time.

56

And actually there are two separate lawsuits now challenging that environmental review which the Department and the New York City Law Department are defending in State Court, you know, challenging various aspects of the environmental

A VOICE: Louder.

MR, ROBERT ORLIN: They were just challenging various aspects of the environmental review --

And I'm sorry if I'm not loud enough.

-- where the court has upheld the environmental review. There's another lawsuit that's still pending. And maybe Joyce can explain what we consider when we do the

that --

environmental review, what background we take into account.

MS. JOYCE MARIANI: Yes.

1.9

For the off-site analyses and on-site, but primarily off-site, we look at the existing conditions of the traffic in the area. We go out and we take full counts of traffic at major intersections along routes traveling to and from the facility.

We identified six intersections here, that I think we did a detailed analysis on for this MTS. I think it's six. Let me just give you not the wrong information there. Is it six, Bob or four? Four, we did four.

So we went out and we counted. We actually, you know, had several people out there count the vehicles for many days to determine what the existing traffic patterns were in the area during the weekday, a typical day of operation.

We had also been out there later on during the summer months to look at some of the other activities related to the busing of students to the -- and users of the aqua center, as well to see -- and users of the aqua center as well to see

rush hour. We looked at a facility peak hour, we called it, which is usually after rush hour. It's about 9 or 10 a.m. in the morning when the most Department vehicles or DSNY collection vehicles will go to the facility.

And then we did a PM peak analysis during background peak hours which is really your afternoon rush hour. So I mean that's the standard traffic analysis that's done everywhere.

A VOICE: But we take the subway --

A VOICE: Did it include 92nd Street between First and York Avenue where the buses idle?

There are four or five buses every
-- every day, all hours of the day that idle at
that location, on 92nd Street side-by-side with
Stanley Isaacs, one block from the proposed site
one-and-one-half blocks from Asphalt Green.

MS. JOYCE MARIANI: I'm going to turn that over to Bob from Urbitran Associates. They really did the very detailed traffic analysis. We also have a map that we can show them of -- do we have the map?

MR, ROBERT MICHEL: Hi. I'm Bob

what that might -- to consider that as part of the analysis.

And then we take the existing conditions. We look at any planned developments or projects that are in the area of the site. We obtain the traffic data that's prepared for those projects from the people who are doing the environmental studies of those projects or any traffic projections that are available for that

We include that in what we call the Future No Build Scenario. We take today's volumes. We take any new projects' volumes and add them to our volumes in the future. And then we also escalate our background traffic volumes to the Build year. We know that over time there will be growth and the projected traffic volumes in the area will change.

So we come up with a higher traffic pattern and higher quantities in the future at those intersection before we then look at the addition of all waste hauling vehicles at those same intersections during specific hours.

And we looked at morning peak hours when background traffic is at its highest. Your

Michel, as Joyce said.

I work for Urbitran Associates and we did the traffic analysis.

The analysis' intersections that we did along York Avenue were 86th, 91st and 90th. We also did a separate look at the bus patterns that occur in front of the aqua center, the school buses and we also counted the public buses there.

Now, the traffic analysis that we do takes into account all the buses that are passing through these studied intersections and they're weighted especially heavy because they do interfere with the general flow of traffic.

And then we, in essence, model the operations of the intersections using highway capacity manual techniques which are the techniques that are used by all the studies in the City and the only techniques that are, in fact, used.

A VOICE: You don't have the fact

A VOICE: If you go one block further to the north, you would be on 92nd Street between First and York. The number --

(Applause.)

MR. SZARPANSKI: Thank you, Mr. Opher for your comments.

Since we just got this material, we'll review it as part of our written response and we will address your issue.

The next speaker, No. 6, Gormon Reilly.

MR. GORMON REILLY: Good evening. I'm Gorman Reilly, President of CIVITAS Citizens, Inc.

We wish to submit our comments at this Environmental Justice meeting.

CIVITAS was founded in 1981. It's a not-for-profit, community-based, all volunteer organization of some 2,000 supporters concerned

MR. PHILIP OPHER: Officials and residents have long cautioned that the area's stormy waters had earned it the name Hell Gate. In the SWMP DEIS October 2004, the public emphasized East River navigational hazards as well as currents affecting barging operations.

Comment No. 5L cautions the that East 90 -- I'm quoting. "The 91st Street MTS is sited in a floodplain, to which the Sanitation response was, I quote, "the elevation of the pier level of the converted MTS is set six inches above the 100-year flood elevation."

Presently the hurricane map test says "A major hurricane could push more than 30 feet of storm surge into some parts of New York City."

Six inches versus thirty feet illustrates the gap between Sanitation prevention and hurricane reality.

Now, we have seen in this meeting that Sanitation, legitimately self-interested, is not capable to have a follow-up meeting with us. The Environmental Justice Law, which I have

68

with urban planning, zoning and quality of life issues affecting East Harlem and the Upper East Side of Manhattan.

The Solid Waste Management Program plan proposed by the Department of Sanitation has been approved by the City Council and signed by the Mayor. Now although litigation has been filed challenging the SWMP, and the DEC approval has yet to be, we believe the SWMP should be accepted as an existing fact and a reality to be dealt with. It is now time to listen to and act on the very legitimate concerns of the surrounding neighborhood at East 91st Street.

First and foremost is traffic.

The promise of no queuing on the streets must be guaranteed. As it stands now, the width of the proposed rebuilt ramp - and maybe that is correct and I would like to hear evidence on this - where it intersects with York Avenue does not seem to allow for two-way traffic. Thus, at peak hours a bottleneck will form.

It may be preferable to widen the ramp for its full length, which may cause some small incursion on the existing parkland and that

INC., 212-840-1167 ROY ALLEN & ASSOCIATES, 521 Fifth Avenue, 17th floor, New York, New York 10175

71 69 1 1 (Applause.) 2 would take state approval. 2 3 MR. WALTER CZWARTACKY: Hello? I'm 3 The presence of a Sanitation Department employee to manage traffic on the ramp 4 4 sorry. 5 The ramp is a two-lane ramp for its 5 will also be essential. It should be supplemented 6 entire length. We've had this discussion several 6 by police presence during peak periods at the 7 times before. We are more than willing to show 7 intersection of York and 91st Street to ensure 8 you the drawings and plans. 8 that all elements of traffic, including 9 It's absolutely -- we recognize from 9 pedestrians, are safeguarded. 10 past problems we've had when we had a one-lane A second concern is protecting the 10 ramp that we absolutely need a two-lane ramp. 11 11 surrounding neighborhood from deleterious impacts 12 This is a two-lane ramp for its entire length. 12 of noise, odors and toxic emissions, as you know, when the youngsters will be playing very close by 13 A VOICE: Why don't you show it in 13 14 your drawings? 14 in the adjoining parkland. 15 MR. WALTER CZWARTACKY: The 15 Consideration should be given to 16 drawings are -- you can look in the back of the enclosing at least part of the truck ramp that 16 room and on our web site. The permit applications 17 leads from York Avenue to the MTS, with suitable 17 18 ventilation systems incorporated into the design 18 are there and the drawings are in the permit 19 application so you can look at them. We're not that will vent fumes away from the playing field 19 20 hiding anything. 2.0 and the Murphy Center. 21 21 In addition, measures must obviously So, one. 22 Two, we have and we've discussed and 22 be taken to ensure that foul smells and harmful met with members of the community board about 23 emissions do not overwhelm the playing field and 23 24 screening the ramp, the view of it. In fact, have 24 nearby streets. 25 incorporated into the design a louvered cast The third concern is the visual 25 72 70 72 1 70 1 steel. It's called a charcoal green wall which is 2 2 impact of the surrounding area. something we showed various alternatives to the 3 At a minimum there should be a 3 community board. And that was the one that --4 4 barrier between the ramp and the playing field to 5 well, I wouldn't say it was applauded, but it was block out any view of the trucks making their way 5 6 the one that everybody said well, if you've got to to the MTS. It could also serve to blunt noises 6 7 do it, that's what you should do. And that's we and foul smells. 7 8 8 Given the care expended on the 9 The air issues associated with 9 appearance of this recreation site, which is a covering the ramp, we've studied previously. We jewel of this community, attractive plantings need 10 10 11 do believe that that has an advantage. We don't 11 to be integrated. 12 see that as an advantage in terms of moving air 12 A final concern, if you will, refers 13 13 to the program for handling commercial waste. emissions away... 1.4 The Department has already 14 As you know, there's no significant 15 committed, during the ULURP process and 15 commercial development north of 86th Street on 16 York Avenue. So allowing a large number of 16 subsequently the Commissioner committed, to have a 17 Sanitation officer on duty at the foot of the ramp commercial waste hauling trucks to ply their way 17 18 to control traffic and ensure safety. during the hours from 8 p.m. to 8 a.m. seems to be 18 19 unreasonable. 19 And I think that's all of your 20 points. 20 We suggest that the limit be set at 21 And, as I said, moving forward we 21 ten or fifteen trucks per hour and the MTS be 22 are about to go -- and the timeline we've shown 22 closed for the receipt of solid waste during the hours from 11 p.m. to 6 a.m. in the morning. 23 shows us going before DEC, which is where we 23

MR. WALTER CZWARTACKY: Oh, the commercial waste haulers.

Commercial waste haulers in this town operate at night and they operate at night because they simply can't move on the streets during the day.

The criteria for defining the amount of commercial waste that goes to this facility are number one, programming commercial waste to go to this MTS. And the others that we are proposing to build was something that the Council directed us to do in 2000.

And we defined the quantity of waste to go to this facility based on an analysis of off-site impacts, limiting the numbers to those hours when they operate and to numbers that would not, based on the appropriate protocols and the appropriate mechanisms, cause traffic or noise

ramp, a long, large ramp to put all of our fully-loaded garbage trucks on that ramp idling waiting to go into our facility. And unfortunately that ramp has to go right through the middle of Washington Square Park.

Laughable, right? It's a joke. I mean nobody would believe it. It's stupid. Nobody would propose such an idea, no one, or they'd be killed by the press. And it would never be adopted ever, ever in a million years. It's absurd.

Now, just to assure the people of Washington Square Park that they don't have to worry about something stupid like that happening, the Department of Sanitation is going to adopt a regulation whereby no private operator can receive a permit to operate a transfer facility within 400 feet of a "sensitive receptor" or a park, like Washington Square Park. So they're safe.

Okay. Now we're going to move from this fantasy and to see how quickly fantasy can turn into a harsh reality.

Here were are today. We have this facility, that you're going to hear a lot about

76

75

74

(Audience participation.)

MR. SZARPANSKI: Our next speaker,

74

No. 7, Greg Costello.

impacts.

(Applause.)

MR. SZARPANSKI: And if speaker 8 could get ready, please.

MR. GREG COSTELLO: Okay. Am I loud? Good.

Picture this absurd, ridiculous scenario I'm going to throw out at you here.

The Mayor of New York -- it belongs on Saturday Night Live actually. The Mayor of

New York says we need a very large garbage 15 transfer facility. It's done. We just need it. 16 17 That's all -- that's the way it is. And we've

studied this very carefully, as you can see and we 18 determined that there is only one location in all 19

20 of New York where this site would be feasible. And that's where it's going to go. And that site 21

22 will be Washington Square Park. 23 We're going to build a large garbage facility on the two sides of Washington Square 24

Park. Oh, and unfortunately we do have to build a

76

and you already know a lot about, called Asphalt Green. Talk about sensitive receptors, going to the density of human activity that takes place all day long, everyday and into the night at Asphalt Green on the fields, at the pool in the workout facilities, all of these people, most of them younger, accumulating in relatively small area.

I submit to you that Asphalt Green is an infinitely more sensitive receptor than Washington Square Park, is it not?

(Applause.)

MR. GREG COSTELLO: Or for any other park in New York City for that matter.

(Applause.)

MR. GREG COSTELLO: So what's going to happen now is that no private facility is going to be built at Asphalt Green because of the regulation. But the Department of Sanitation is going to put their own facility on that site. It's going to be not only within 400 feet of a sensitive receptor, but unfortunately we have to have this ramp (indicating) and we have to put all of our trucks on this ramp, idling, full of garbage waiting to go into the facility. Oh, and

	77		79
1	77	1	79
2	unfortunately that ramp is going to go right	2	think we should move a little faster.
3	through the middle of the sensitive receptor.	3	A VOICE: I think you should answer
4	And so my question for the	4	our question. You haven't answered the question.
5	Department, and it's a rhetorical question is, how	5	MR. WALTER CZWARTACKY: It's a
6	can the Department morally justify to all of the	6	very interesting scenario that was laid out to us.
7	men, women and children who live in our	7	But it should have been said,
8	neighborhood, building a facility that by your own	8	imagine you want to build a park and you have a
9	regulation you would not allow a private	9	piece of land. And on one side of the land
10	contractor to build.	10	there's a highway with 80,000 cars a day on it.
11	(Audience participation.)	11	And past that there's a garbage facility and to
12	MR. SZARPANSKI: Before I call	12	get to it there's a ramp.
13	the next speaker, I just want to remind you	13	But you really need a park so you
14	(Audience participation.)	14	build a playing field on one side. And kids come
15	MR. SZARPANSKI: Did you hear it,	15	play and enjoy it and have a great time. They
16	rhetorical question.	16	have such a great time that you get together later
17	(Audience participation.)	17	on and on the other side of the ramp you put up a
18	MR. SZARPANSKI: Hold on.	18	swim center.
19	MR. ROBERT ORLIN: Under the	19	That's the situation that exits
20	Department's siting rules, there are existing	20	here. We would not be proposing to do this.
21	facilities, facilities with permits that are less	21	A VOICE: What a cop out.
22	than 400 feet from residential districts or parks.	22	MR. WALTER CZWARTACKY: It's not a
23	As I mentioned before	23	cop out. It is a fact.
24	(Audience participation.)	24	A VOICE: Cop out.
25	MR. ROBERT ORLIN: As I mentioned	25	A VOICE: So because there's a ramp
	78		80
1	78	1	80
2	before, there are three of them in one community	2	there
3	district in Jamaica, Queens. The Department of	3	MR. WALTER CZWARTACKY: No. Because
4	Sanitation has had a permit for this facility,	4	because we know that these facilities have
5	East 91st Street, for over thirty years. It's	5	co-existed in the past. We have done the analysis
6	operated the facility for thirty years. So	6	to demonstrate they can co-exist in the future.
7	therefore, in order to try to maintain some	7	We would not be proposing this
8	equitable distribution of solid waste facilities	8	A VOICE: The park was called Rat
9	throughout the City, the Department's siting rules	9	Park. And I grew up in that park, Rat Park, where
10	allow previously permitted facilities to maintain	10	rats played and so did kids. We slide down
11	their permits and to continue operations.	11	sliding boards and played with rats. And that's
12	•	12	not nice, that's not cute, that's not what we
13	A VOICE: It's not been operational	12	
T 💛	A VOICE: It's not been operational though.	13	want.
14	though.		
		13	want.
14	though. MR. SZARPANSKI: Just a reminder,	13 14	want. (Applause.)
14 15	though. MR. SZARPANSKI: Just a reminder, we are being	13 14 15	want. (Applause.) MR. SZARPANSKI: Our next speaker

And I live at

from the said transfer station park.

I'd like to define some terms. We

you want to take the time to listen to us or ask

your questions and get your comments on record, 1

24

25

1 81 83 1 haven't defined the essential term of this 2 2 (Applause.) 3 meeting. We were told that this is what this . 3 MR. GEORGE MORIN: (Indicating) 4 meeting is about, environmental justice, and no 4 Here is a satellite photograph of that area. 5 33rd Street, 34th Street, the West Side Drive, no 5 one has defined that term. 6 6 Well, luckily the U.S. Environmental overpasses that the garbage trucks can't go under 7 Protection Agency has. And let me read to you. 7 as it is on the FDR. You would have total access 8 Environmental justice is the fair 8 here. treatment and meaningful involvement of all 9 9 You have been copping out saying you people, regardless OF race, color, national 10 haven't investigated that. This (indicating) is 10 origin, or income with respect to the development 11 11 -- this would be environmental justice. This is 12 and implementation and enforcement of 12 the site, same site. I have one in my backyard, 13 environmental laws. 13 same satellite picture of where you want to put 14 14 It will be -- it will be achieved this. It's one of the most densely populated 15 when everybody enjoys the same degree of 15 residential areas in the City. 16 16 protection from an environmental and health hazard That is not environmental justice. and equal access to the decision-making process to 17 (Audience participation.) 17 18 MR. SZARPANSKI: Thank you. 18 have a heathy environment in which to live. 19 Now, that said, I want to 19 Steven Nelson. 20 congratulate of all of you for the hard work you 20 MR. STEVEN NELSON: My name is have done trying to squeeze this transfer station 21 Steven Nelson. 21 22 22 into that area. That is a residneital area so I've lived in the area for 32 years. 23 23 thick with residents that it just is one of the My children grew up in this neighborhood. And I 24 densest residential areas in the City. 24 am more than familiar with the nature of the 25 I harken back to where you said that previous efforts of the Sanitation Department to 2.5 82 84 1 82 1 transfer waste during the 1980's and it was 2 you have -- you've already done this, you can do 2 it again. While you were doing it on the corner 3 shockingly horrible. 3 next to my building there was a Midas Muffler shop 4 So let me just say that I'm late to 4 5 and today there's a residential building. 5 this party. I'm embarrassed that I haven't On the other corners there is a gas 6 participated earlier. But I sit here and listen 6 7 7 to you folks, who are on our payroll, and I am station. And today there's a residential building. And on the street that the garbage 8 shocked. You engage in deception that is 8 9 trucks are going to go past, there was a vinegar 9 laughable. 1.0 factory, a real vinegar factory. Now it's a food 10 You have given us --11 11 store. That is not environmental justice. (Audience participation.) Now, take that a little further and 12 MR. STEVEN NELSON: You give us a 12 13 compare -- you said that the 33rd Street thing is 13 picture of this transfer station which is out of the question. Well, I'll submit to you 14 deceptive. The transfer station is going to be 14 15 that it's out of the question because your ten stories, 110 or 118 feet high. And if you 15 16 16 Commissioner admitted to Community Board #8 that look at the picture in your PowerPoint, it's 17 they never even bothered to look at other places. 17 amazing how the concrete factory and the Murphy 18 (Applause.) 18 Center dwarf that building. That's not reality. 19 19 MR. GEORGE MORIN: I was at the That's deception. 20 Auto Show the other week and I was waiting for the 20 (Audience participation.)

> MR. STEVEN NELSON: all, you sat there and said well, we've sat at this meeting and we've sat at this meeting and we've sat at that meeting and we've listened to

Second of

your comments.

21

22

23

24

bus at 34th Street and 11th Avenue. And 1 looked

west on 34th Street. That was a clean shot right

into the River. There was not an apartment

building in sight. There wasn't residents. It

was an industrial, commercial area.

87 1 85 1 2 you are lying to yourselves. 2 Sitting there doesn't mean you're (Audience participation.) 3 listening. You have not responded in any 3 MR. SZARPANSKI: Thank you. 4 4 meaningful way to the underlying fundamentals of 5 Our next speaker is Carol Tweedy. 5 this project. It is disgraceful. It is not 6 (Applause.) 6 dealing with reality. It is not dealing with four-year-old children. It is not dealing with 7 (Putting up poster.) 7 MS. CAROL TWEEDY: My name is Carol 8 8 rats, noise and dust. It is not dealing with Tweedy and I'm the Executive Director of Asphalt 9 9 fundamental issues. 10 Green. 10 Now, you do have alternatives, as 11 (Audience participation.) suggested by the predecessor speaker. The entire 11 MS. CAROL TWEEDY: We are strongly 12 12 West Side abuts a river, which is twice as wide, opposed to the opening of the marine transfer 13 which has piers flowing into it, which has rail 13 station. And because of who we serve, we believe 14 14 yards already existing, and which in the lower 15 it violates the principles of environmental half of the West Side has absolutely no 15 16 justice. residential traffic on the extreme sides and is 16 17 Our tag line - sports and fitness 17 commercial and easy to develop. 18 for a lifetime - says it all. We address the issue 18 So if you're talking about taking a 19 of \$70 billion of healthcare costs that are spent parcel that has previously served as transfer of 19 in this country which would be saved if people 20 waste and just updating it, sure, this is easier 20 but it doesn't -- it doesn't address the 21 were fit. 21 22 Last year we served 47,000 New 22 fundamental problem which is that this should be Yorkers who came to us from all over the City. 23 23 in a commercial area which has access to 24 (Applause.) pre-existing piers and which doesn't sit in the 24 MS. CAROL TWEEDY: Free services 25 25 middle of a park. 88 86 88 86 1 1 were given to 14,000 people. We reach out to (Audience participation.) 2 2 communities at risk of diabetes, obesity and 3 3 MR. STEVEN NELSON: And this asthma. The majority are public school children 4 gentleman has the audacity -- rational guy, okay, 4 who are our neighbors in East Harlem. Over 135 I spoke with him before, entirely rational, as all 5 5 different schools, businesses and other 6 you are. But you're public servants and you're 6 7 not-for-profits use Asphalt Green on a regular not listening. You've dug your heels in. You're 7 8 basis. 8 self-justifying. You are engaged in Alice In We were recognized by The New York 9 Wonderland. Anybody who can say this plan has no 9 10 Times for the ways in which we engage minority material adverse effect has got to be smoking its 10 children in swimming, a group of special concern own funny cigarettes. You can't believe this. 11 11 12 in the framework of environmental justice. The (Audience participation.) 12 13 Times said, "... the overwhelmingly white world of MR. STEVEN NELSON: It's not 13 reality. So, please, I urge you, listen. Your 14 swimming gets turned on its ear in places like 14 Asphalt Green..." 15 colleague had the audacity to say we had this 15 16 (Applause.) transfer station and it's your fault. You built a 1.6 MS. CAROL TWEEDY: These users come 17 park on one side and an aquatic center on the 17 to our unique 5.5-acre campus with gymnasiums, an 18 other side. Are you listening to yourselves? 18 19 AstroTurf field and a magnificent 50-meter Olympic I am embarrassed that I'm late to 19 standard pool. The ramp to the marine transfer 20 the party. I apologize to all of you. We should 20 station runs right through the campus. And I would be ashamed of ourselves that we haven't gotten 21 21 more involved, but you should be ashamed of 22 suggest that the poster that I've presented gives 22 23 you a better idea of the way in which the ramp 23 yourselves because all you're doing is going comes right through the campus. 24 24 through the motions. You've dug in your heels.

You're giving platitudes. You are lying to us and

25

I want to say that the fact that

your Final Environmental Impact Statement found no significant adverse impact from the MTS construction or operation just makes me incredulous. Let's just start with construction. I'm going to move away from the mike and show the one lane of the ramp up against the building. Tell me that in construction and in (Adjusting microphone.) MS. CAROL TWEEDY: Thank you. We've become old friends. This is the existing ramp (indicating.) It's going to be widened in order that trucks can go both ways. This edge of the ramp is right up against the building, the foundation wall of the aqua center. The other side of the ramp is right against the edge of the field. As it comes down here, it's right along the walkway through which people enter the aqua center.

health, we cannot support this. We have a very good idea about how damaging it will be. We know, as was stated by other people giving testimony, that children were nauseated by the smells in the past. And they will again be subjected to the environmental assault. And ironically, the masking agent for the smell is an irritant for asthmatics and people with allergies.

Over thirty years ago the City agreed that it was important to encourage activity and exercise, and the deserted Asphalt Plant was transformed into a magnificent recreational facility. What happened between then and now when 43 of all public school children kids are overweight and obese?

This, among so many other realities, makes the plan to develop a garbage dump at 91st Street completely incomprehensible.

(Applause.)

MR. SZARPANSKI: Thank you. Speaker No. 11, Anne McCorry.

A VOICE: Do you have any reaction to any of this?

MR. SZARPANSKI: I heard it all.

MS. CAROL TWEEDY: This is the

(Applause.)

traffic across the ramp.

(Applause.)
MS. CAROL TWEEDY: It was mentioned that louvers were presented as barriers to the Asphalt Green campus and it was suggested that that was approved by the community board. I was at that meeting. It was described by the community as lipstick on a pig.

(Audience participation.)

MS. CAROL TWEEDY: The land we are on, the buildings, they're owned by the New York City Department of Parks. Since the Asphalt Green partnership began in '83, the City itself has invested \$17 million in capital funds to support that plant. And neighbors have spent twice as much as that and millions in operational support. All of these investments are at risk.

Our huge field, which is on the south side of the ramp, is a busy playground.
Children and the elderly, the disabled, they use our facilities throughout day and evening. There are school buses, vans for the disabled.

The traffic at York and 91st is

terrible already.

As an organization committed to

A VOICE: Especially about the walkway, how you're going to handle that when you have 70 trucks.

MR. SZARPANSKI: I've heard the comments before. We addressed our answers in Chapter 40 of the EIS. I urge you to look at our answers.

Thank you.

A VOICE: Can you brief me on it right now?

MR. SZARPANSKI: No.

Speaker No. 11.

A VOICE: What about masking -- MR, SZARPANSKI: Is speaker No. 11

here?

MS. ANNE MCCORRY: I'm here. MR. SZARPANSKI: Oh, I'm sorry.

A VOICE: Ask about the irritants.

MS. ANNE MCCORRY: I'd like you to

answer their questions. I'd be willing to yield my three minutes so that you would answer their questions.

(Applause.)

MR. SZARPANSKI: That's fine.

1	93	1	95
2	The irritants, we mentioned earlier	2	activities are.
3	that we're not using a masking agent, we're using	3	I have very little to add to what
4	a neutralizing agent. If you want to see how that	4	has been said already. It is irresponsible. It
5	works, come out and see the Staten Island Transfer	5	is unimaginable that you would actually conceive a
6	Station where it's in use.	6	plan and invest the amount of money the deal is
7	Thank you	7	in the air, people. We can see it.
8	Next speaker.	8	The amount of money spent on a
9	A VOICE: What is it?	9	project where you will put that amount of
10	A VOICE: Can you describe it us so	10	infestation, toxic fumes and dirt into an area
11	that we understand what it is and how it works?	11	that is filled with highly, highly populated a
12	MR. SZARPANSKI: Dan Harkins from	12	highly populated area, so not only will the
13	HDR will talk about it.	13	children, but senior citizens, families, a
14	MR. SCOTT MILLS: We have sheets	14	thriving neighborhood.
15	with	15	I have very little else to say other
16	MR. SZARPANSKI: I'm sorry. Why	16	than go back to the Mayor and do your job. Tell
17	don't you come up to the microphone.	17	the Mayor it's the wrong project for this place.
18	Scott Mills is with HDR. He can	18	(Audience participation.)
19	talk about that.	19	MS, ANNE MCCORRY: And one more
20	MR. SCOTT MILLS: The odor and	20	thing. That whole that whole discussion about
21	neutralizing agent is sorry. There's a copy of	21	the Rail Yards at 34th Street. Well, the deal is
22	the MS sheet and the Part 3 permit application.	22	in the air about that, too. Someone's going to
23	It describes it as a non-toxic agent.	23	make a lot of money and they don't want garbage in
24	A VOICE: What's it called?	24	their area. Or whatever is going to be built
25	VOICES: What is it?	25	there so that they conduct a deal, will not be

We'll provide all these answers and answers to other questions that you raised in writing. MS. ANNE MCCORRY: My name is Anne McCorry. I've been a resident in the area for over twenty years. I'm a member of Asphalt Green and I've also taught at Stanley Isaacs in the evening, adult education classes for immigrants who are looking to improve their knowledge of English and for people who are looking to get GEDs and improve their reading and writing.	2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20 21 22	anything like what's being put into an area that's already a residential area. This is a wrong, bad idea. Do your job. Go back and tell the Mayor and the administration you've got to find another place. (Audience participation.) MR. SZARPANSKI: Thank you. Doctor Arthur Livingston. Is he here? (No response.) MR. SZARPANSKI: Okay. Patricia Livingston? A VOICE: She left with him. MR. SZARPANSKI: She left with him, okay. Thank you. Suzanne Lukas. And the next speaker after that, No. 15, Hugh Smyser. MS. SUZANNE LUKAS: I'm afraid I will be repetitious because the previous speaker addressed the same issue I was going to say.

worse idea. And just because a mistake was remedied in 1999 there is no justification to bring it back just because it was there in the past.

1.

1.1

1.4

(Audience participation.)

MS. SUZANNE LUKAS: And this is what -- I repeat what the other speakers said just before me, there are areas in the City that have not been developed, that are industrial, commercial or just plain undeveloped like on the West Side, along the Hudson, and the lower part of Manhattan.

There are well-connected, deep-pocket developers would have their eyes on that and they certainly don't want their prospective investment to be depreciated by putting this facility there.

It could be done before they buy it.
It could be done and arranged that it will be there. It could be well designed. It could be separated and shielded for where they want to do their office building, apartment complexes built so that it would not destroy the real estate there.

With 24-hour operations at the planned stations, these facilities will never be completely cleared of raw garbage. It's going to create a huge breeding ground for rodents, vermin and other vectors. Now I know that's already been commented on a lot.

Sanitation has proposed application of copious amounts of rodenticides and pesticides at each of the new transfer stations including East 91st Street and Southwest Brooklyn. And as the City applied these rodenticides and pesticides within the MTS, they will either be transferred into the sewage system or they run off into the adjacent waterways or both. But there hasn't been cumulative citywide consideration of the environmental impact on water quality and marine ecology.

(Applause.)

MR. HUGH SMYSER: Rodenticide and pesticide residues will also be picked up by the tires of the hundreds of public and private trash trucks. The residues will also enter the waterways carried in urban runoff from the street nearby. They also will be carried and tracked

But here, in this limited area, we really don't have the ability to do that kind of shielding. I don't know what you think when all night commercial garbage trucks will be going on this ramp both ways idling, dumping whatsoever.

I live on East End Avenue, 45 East End Avenue. There is a grocery store across the street from me, a Gristedes. And a few times a week the garbage truck comes there at night. I know very well that the garbage truck, the commercial garbage truck picks up at night and I know it every time when they stop there.

(Laughter and applause.)

MS. SUZANNE LUKAS: So if I have 80 of them in my block, I certainly would know about it now matter what kind of ramp you build on the site.

(Applause.)

MR. SZARPANSKI: Thank you.

Hugh Smyser.

MR. HUGH SMYSER: Yes. I'm right

23 over here.

I want to bring up another

environmental dimension that was overlooked.

into the community.

Here at 91st Street that means trucks rolling 24/6 across the 91st Street sidewalk spurting serious toxins into the community across the paths of thousands of children and seniors as well adults across the driveway to enter Asphalt Green. It will have a serious environmental impact.

In closing I'd also like to say I'd like to comment a bit about, I think some of the sort of -- some of what's going on and why this process has been working the way it is working.

Essentially repeating what this gentleman said, nobody seems to hear us. We speak and speak. You speak and speak. You know, we're the ones who are being affected by it and nobody seems to hear us.

You're convinced of your rightness and you're supporting this as a fundamental belief at Sanitation and you don't take us seriously.

Essentially the developers have the railroads pretty well set up, but not entirely, as the lady just before me pointed out. However, you're trying to ram this down our throats. And

                                                                       emissions from all of the on-site operations - the
 4
        neighborhood of the disaster area.
                                                                4
                                                                5
                                                                       buildings, the trucks and all the equipment at the
 5
                 (Laughter.)
 6
                 MR. SEYMOUR ROTH: New York City
                                                                6
                                                                       property boundary.
        has the highest rate of asthmatic and allergic
                                                                7
                                                                                So we had fence line receptors along
 7
                                                                       the entire perimeter of the ramp and the facility.
 8
        kids. That's a fact that you can't escape from.
                                                                8
        The reason for this unusually high number is rat
                                                                9
                                                                       And if we met the standard there, we would meet
 9
                                                                       the standard past that, the children in the lots
                                                              10
10
        and rat control.
                                                                       and the playgrounds and in the facilities. And we
                 VOICES: Louder.
                                                              11
11
                 MR. SEYMOUR ROTH: Rat control.
                                                              12
                                                                       did meet all the air quality standards at the
12
                                                                       fence line of the facility and the ramp.
        Nobody has ever beaten a rat, as far as I know.
                                                               13
13
                                                              14
                                                                                A VOICE: How about the noise
14
        If you can tell me that you are going to keep rats
                                                              15
                                                                       levels. Are they going to monitored?
15
        away from that station as it is rebuilt, I'll
                                                              16
                                                                                MR. SZARPANSKI: Kitty Wesley,
16
        laugh at you. It's ridiculous. You will never
17
        triumph over a rat with the system of ramps that
                                                              17
                                                                       please come up.
                                                               18
                                                                                MS. KITTY WESLEY: Good evening.
18
        you have, never. I guarantee that.
                                                              19
                                                                                I, too, shall try to be brief.
19
                 Now, it's a fact that environmental
20
        standards for air quality depend on the
                                                              20
                                                                                It is true and I'm sure most of us
                                                               21
                                                                       would agree, that each borough should be
21
        temperature. The higher the degree of exertion in
                                                               22
                                                                       responsible for its own garbage. But the marine
22
        exercise, which is -- lowers the tolerable amount
                                                              23
                                                                       transfer station is not the right place to bring
23
        of air quality, air quality aspects.
                                                               24
                                                                       the garbage and wait to have it placed on barges
24
                 I submit that there's that field now
                                                               25
                                                                       for export.
25
        and as the sun is coming down, kids are playing
                                                                                                                      112
                                                        110
                                   110
                                                                1
                                                                                                 112
 1
                                                                2
                                                                                The traffic, the noise, the odor and
 2
        there. They work up a good sweat, as it would be
                                                                       vermin will be unbearable. The reality is that
                                                                3
 3
        nice to have. However, that same sweat lowers
                                                                4
                                                                       you cannot mitigate these impacts, now especially
 4
        their resistance to the air quality pollutants.
        Has this been figured in? I don't think so.
                                                                5
                                                                       with the construction of the Second Avenue Subway.
 5
                                                                6
                                                                                These factors will be compounded in
                 Finally, if, God forbid, this
 6
        project goes into construction, is the Department
                                                                7
                                                                       a highly residential area, in a community that has
 7
                                                                8
                                                                       many children, day care and after school programs
 8
        of Sanitation willing to pay a fine if air quality
                                                                9
                                                                       and the Isaacs Senior Center has close to a
 9
         standards have been violated? Right, exactly.
                                                                       thousand members. Has this been taken into
                  Thank you very much.
                                                               10
10
                  (Applause.)
                                                               11
                                                                       consideration?
11
12
                  A VOICE: Do we answer the
                                                               12
                                                                                I lived in Peekskill prior to moving
                                                                       back to New York. And Peekskill had the misguided
                                                               13
        question?
13
                                                                       advice to locate the Westchester County Resource
                  MR. ROBERT ORLIN: The Department
                                                               14
14
         facility would be regulated by the State
                                                               15
                                                                       Center Plant at the Charles Point Industrial Park.
1.5
                                                                       Now, remember, that is an industrial park. In
16
         Department of Environmental Conservation. They
                                                               16
                                                               17
                                                                       other words, it was a garbage disposal plant.
17
        have air monitors. If there was a violation,
18
        obviously the Department would pay any penalty, if
                                                               1.8
                                                                                The garbage trucks by the dozen
         there were one. So, you know, the City is
                                                               19
                                                                       lined the streets, idling waiting to be unloaded.
19
                                                                       The stench and the noise was quite unbearable and
        regulated by the State and Federal Governments.
                                                               20
20
21
         And actually New York City DEP, Department of
                                                               21
                                                                       this was an industrial center. There was not very
                                                               22
                                                                       much the citizens could do.
22
         Environmental Protection also would monitor air
                                                               23
                                                                                We don't want the same things to

MS. JOYCE MARIANI: And also for

24

25

City.

24

happen here. It is one of the most beautiful

residential areas of the City. Its gorgeous,

MR. MORT GERARD: But did you see on

MR. SZARPANSKI: Mort, can you go

MR. MORT GERARD: Yes. I'm sorry.

115 113 115 1 113 2 And if we have to wait to 70, how 2 well-attended Carl Schurz Park graced by the many garbage collectors buy new trucks. I mean magnificent East River enjoyed by thousands of 3 3 they have them ten, fifteen years old. What's 4 children, hundreds of seniors and untold residents 4 5 going to happen with these guys. Who's controlling 5 in attractive houses. 6 it? How do we get that in? 6 Thank you very much. Thank you. 7 7 (Applause.) (Applause.) 8 MR. SZARPANSKI: Thank you. 8 9 MS. JOYCE MARIANI: To respond to No. 20, Mort Gerard. You won't be 9 10 the question on the analysis and how it was 10 speaking out of turn now. prepared related to the Department of Sanitation's 11 MR. MORT GERARD: My name is Mort 11 vehicles or commercial vehicles. 12 12 Gerard. 13 We looked at both in all of the I've been a resident of this area 13 14 analysis. What we did was first look at the 14 for over forty years. And I think our concern is Department of Sanitation's collection vehicles and 15 15 primarily that in the past, and tonight your their pattern of delivery. And I have a table 16 16 presentation is, to say the least, not straight 17 here in front of me that you cannot see at the and honest. I'm just holding your own document 17 18 moment, but basically the Department's truck and it sort of misses things. 18 arrival pattern would have them arriving over 1.9 19 On page eleven you say expected average daily throughout is 720 tons of DSNY waste 20 between 5 p.m. -- let me see. I'm sorry, starting 20 -- there are some relays between 8 a.m. and 4 p.m. and 780 tons of commercial waste. Right on. You're 21 21 is when the majority of the Department's 22 22 telling us what it is. 23 collection vehicles will arrive. 23 Then on thirteen in big, bold There's a few hours of three a.m. 24 24 letters you said acceptance of commercial waste. and six a.m. and seven a.m. where there will be 25 25 You go on to tell us that the trucks will go 116 114 116 1 114 1 some Department collection vehicles also arriving 2 between 8 and 8 on the shift. No mention of 2 3 on relay shifts. 3 Department of Sanitation. However, if we go back 4 On top of that we looked at how much to the April 14th document, you say your 4 additional waste could be received, commercial 5 restriction on the number of related DSNY 5 6 waste, between 8 p.m. and 8 a.m. without having 6 collection vehicles delivering waste to 92nd 7 any impacts. And the majority of the impacts you Street, let's say, during certain hours will 7 would see from this is the noise. We know they 8 mitigate estimated off-site noise impacts at 8 are noisy. They travel on routes by your homes. 9 receptors along the routes of these facilities 9 And what we needed to do was look at the standards 10 10 between 2 and 5 a.m. that require us to say how many trucks could drive 11 That gives us a three-hour sleep 11 by and along this route without causing a noise 12 because between 5 and 2 you have your Department 12 13 impact. of Sanitation trucks. Unless I'm missing 13 So we actually did an hour-by-hour 14 something. But you do talk about commercial waste 14 15 analysis to look at what that number could be trucks, but you have nothing about DSNY trucks and 15 without an impact. There were higher numbers we the hours that they're going to be going. 16 16 could have added that would have had impacts. So 17 17 Did somebody miss something or was we do have a table that shows both numbers and the 18 it intentional? You know, it's one of the 18 19 total of the combined trucks. 19 questions I have. 20 (Audience participation.) The second was, I know on your 20

                                                                       school student and smelling the scent of freshly
        two summaries there. One is a restriction on --
                                                                8
 8
                                                                9
                                                                       baked bread from the bakery and it was doorsteps
 9
        one of the hours there was a potential effect of
                                                                       to Asphalt Green for a pickup softball game. My
        Department of Sanitation vehicles being relayed to
                                                              10
10
        the facility. This is the commercial. The
                                                                       childhood memories are forever tied to these
                                                              11
11
                                                                       experiences - the sights, the sounds, smell, taste
        commercial waste is --
                                                              12
12
                                                                       and feelings of my past.
                 MR. MORT GERARD: Oh, I'm sorry. I
                                                              13
                                                               14
                                                                                 My fear is that my children will not
14
        had the reverse.
                 MS. JOYCE MARIANI: Right. And the
                                                               15
                                                                       have these vivid, rich memories because instead of
15
                                                                       smelling delicious baked goods, they will smell
        Department of Sanitation had to modify the relay
                                                               16
16
                                                                       the rancid odor of tons of trash. And instead of
17
        shifts to avoid impacts as well.
                                                               17
                 A VOICE: How does 71 trucks avoid
                                                               18
                                                                        sprinting to Asphalt Green they will be leading
18
        noise, period? I don't understand it. Zero
                                                                        their lives as Sanitation trucks release the
                                                               19
19
                                                                       pollutants of increased traffic. It is
20
        trucks ---
                                                               20
                                                               21
                                                                       unfortunate.
                 MS. JOYCE MARIANI: It's -- yeah,
21
        the 71 trucks is over a 12-hour period. The
                                                               22
                                                                                 (Applause.)
22
                                                                                 MS. VIVIAN DOMINGUEZ: It is
        maximum number of commercial waste during any hour
                                                               23
23
                                                                        unfortunate that this one project could cause me
24
        would be - I'm looking at the table here - 14.
                                                               24
                                                                        to no longer want to raise my future children in
                                                               25
        The majority of them are under seven or eight in
25
                                                                                                                      120
                                                        118
                                                                                                   120
                                 118
                                                                1
 1
                                                                        the community I truly love and call my home.
                                                                2
 2
        any given hour.
                                                                                 I hope that this policy decision is
                                                                3
                 A VOICE: How does that avoid
  3,
                                                                        thoroughly evaluated with the concerns of
                                                                4
  4
        noise?
                                                                5
                                                                        residents at the forefront because we are the ones
                 MR. SZARPANSKI: All right. Thank
  5
                                                                        mostly deeply impacted by this decision.
        you. I think we answered the question.
                                                                6
  6
                                                                                 Thank you very much.
                                                                7
                 (Audience participation.)
  7
                                                                                 (Applause.)
                 MR. SZARPANSKI: Vivian Dominguez.
                                                                8
  8
                                                                                 MR, SZARPANSKI: Thank you for
                 MS, VIVIAN DOMINGUEZ: Can you guys
                                                                9
  9
                                                               1.0
                                                                        your comments.
        hear me?
10
                                                                                 Next speaker, No. 22, Chevon, is
                 Hello, everyone. My name is Vivian.
                                                               11
11
                                                               12
                                                                        that Sheron?
12
         I'm 19 years old.
                 We have come from our offices and
                                                               13
                                                                                 A VOICE: She had to leave.
13
                                                                                 MR. SZARPANSKI: She left. Okay.
         homes to express our discontent with the plans to
                                                               14
14
                                                                                 No. 23, Robert Klingon.
15
         build a garbage dump in our community. So for our
                                                               15
         concern for the fabric and welfare of our
                                                               1.6
                                                                                 And if speaker 24 can get ready,
16
                                                               17
         neighborhood, I thank those local residents in
                                                                        Karen Lapidus.
17
                                                                                 MR, ROBERT KLINGON: Thank you.
18
         attendance.
                                                               18
                 Also, I would like to thank the New
                                                               19
                                                                                 My name's Robert Klingon. And as
19
                                                                        I've been sitting here through the meeting I
                                                               20
         York State Department of Environmental
20
                                                                        thought of how to summarize it and I thought it
                                                               21
21
         Conservation for allowing us to venue -- for
         allowing us this venue to constructively express
                                                               22
                                                                        would be something like this:
22
                                                               23
                                                                                 I never thought that I would see a
         our disdain for this project.
23
                                                                        garbage transfer station as environmentally benign
```

as a tree. The things that's underlying the whole

Towers all my life. And in those years I have

24

25

121 1. 123 1 2 matter and the effect on children in the South 2 -- I should say I have a history as an 3 environmental lawyer. And one of the problems I 3 Bronx. And they were saying that that was the 4 saw with the environmental, especially the 4 reason, a major reason for the high incidence of 5 environmental review laws, was that they are long asthma there. 5 6 And it was a pity because of Robert 6 on process and short on substance. 7 And what I'm seeing here and 7 Moses and all the highways that were put in, 8 there's nothing that can be done about it. But 8 experiencing here - and I'm new to this process. I 9 there is something that can be done about this. 9 just moved into the neighborhood a couple of 10 We're talking about putting this 10 months ago - is a lot of obvious distrust. 11 facility and a ramp and the particulate matter in 11 And one of the reasons is that my 12 the middle of the only open space, the only sense is you guys are coming to us saying this is 12 playing field on the East Side of Manhattan north going to be clean, don't worry about. There's no 13 13 of the 4TH Street playground. There's nothing in 14 environmental impact. There will be no smells. 14 15 You don't evens notice the trucks. There's no between. 15 So if you take that away from the 16 16 noise, et cetera, et cetera. 17 And what we're experiencing is 17 kids or you make the kids -- or put the kids at 18 risk for playing there, there's really, for many something very different. If you came to us and 18 kids, no place to go. And for that reason I just 19 19 said this is mess, we're going to get it as clean 20 as we can, but it's a mess and it has to go 20 think you've got to go back to the drawing board 21 and really think through alternative locations and 21 someplace. And we've looked everyplace else. And 22 then come back to us and say there really isn't 22 this is the only place it can go, then you'd have 23 any other place to put this. 23 a much better dialogue. 24 (Applause.) 24 My sense is that that has not happened and perhaps that was swallowed up in a 25 MR. SZARPANSKI: If I could just 25 124 122 1 124 1 122 2 make a couple of comments on your remarks. 2 political process when your environmental process It seems to me that people have the 3 3 began. 4 impression that this is the only facility we're But if you think about it, this 4 focusing on. This is one of four marine transfer 5 environmental process has been based on a 5 6 stations and one of at least eight facilities that 6 grand-fathered facility that has been there for 7 we will contract with throughout the City. So it's 7 many, many years. I'm not sure when it was built 8 not the only location. 8 but it was at least thirty years ago; is that ... Secondly, on the issue of 9 9 correct? MR. ROBERT ORLIN: 1940. 10 particulates. .10 When we conducted our environmental MR, ROBERT KLINGON: 1940. 11 11 12 review, we used very conservative or overly 12 The neighborhood was vastly different then and the environmental standards 13 predicative numbers. You should know that by 2012 13 were vastly different then. Obviously everything 14 the Department's entire fleet will have 14 15 has changed. Some things have changed even in the 15 particulate filters. And if we were to do the 16 analysis based on emissions using these particular 16 last eight years since the facility was closed. 17 filters, it would yield ten percent of the number But to say that this is the best 17 18 facility or we're not looking at other locations 18 in terms of particulates as was analyzed in the 19 EIS. So it's one-tenth the number, okay? 19 or focusing on the existing MTS site, is to say 20 MR. ROBERT KLINGON: Is there any that well, back in 1940 it was a good idea and 20

we're going to rely on that now in 2007.

things. I just remember an article that I saw in

Medical Department doing a study of particulate

But now we know a lot of different

The Times in the fall about the NYU Environmental

-- just a quick question. Is there any effort in

I guess there are two questions.

One, is there any effort to follow the Department

of Transportation and move your trucks over to

the Department to --

1.7

natural gas, which would avoid the problem altogether.

And the second was said to me just as I was getting up by the young woman sitting in front of me, and that is what about the private

(Applause.)

trucks.

MR. SZARPANSKI: 1 can't tell you about the analysis we did in terms of switching to natural gas. We are using ultra-low sulfur diesel.

MR. ROBERT ORLIN: The Department is testing natural gas trucks. They have some operational issues. But the Department's actually in the forefront of testing out alternative fuels and alternative technologies. So we are actually testing them out.

And if it becomes something that works well for us, we might switch over to that. I mean I don't foresee that happening in the near future because they said their operational issues need to be longer. But it's something the Department looks at.

A VOICE: Next question.

their own self interest.

Okay. Let's move on.

No. 25, Margaret McGlynn.

MS. MARGARET MCGLYNN: Can you

hear me?

MR. SZARPANSKI: Yes.

MS. MARGARET MCGLYNN: 1 live on 74 -- 88 East 88th and York Avenue and I've lived there since 1974. And before that I lived on East 85th Street so I've been up in this neighborhood a long time and I finally arrived at the senior citizen thing.

I want to say that I'm so proud of this community for the information that's come forth.

First of all, the way that cars idled on York Avenue was unbelievable. It went on and on and on. It was all day long. It was beyond 86th Street even and they wind up to go into the ramp, running their motors. It is disgusting and it went on for years and years and years and it finally was able to be stopped. But this is a very bad thing.

I don't care what clean burning

MR. SZARPANSKI: There are a lot of other people waiting to being called so I think

we need to move on.

A VOICE: What about the commercial trucks.

MR. SZARPANSKI: I'm sorry. The commercial trucks.

Look, the commercial trucks can only come if we allow them to come to this facility. We can impose certain restrictions to make sure that they are not -- they're not just playing by their own rules. They can be made to comply with the same standards that we would hold our own trucks to.

A VOICE: And what plans are being made to do that?

MR. SZARPANSKI: At this point there's capacity for commercial trucks to come to this facility. We have not contracted or allowed any commercial trucks the right to come. That's something that we would need to work out.

We hope that they will be induced based on economics that if they are collecting nearby, that they'll come to this facility for engine you put in whether you think there's going to be tax money to pay for that, I don't believe it.

In addition, the condition of the City, if you want to see, go over to Carl Schurz Park now. Someone referred to it as being beautiful. Look at how dirty, how broken up the concrete is. Take a look at what's around. Maybe you haven't been at Carl Schurz Park for awhile. But if you look at the condition there and then think of them doing -- spending our money building this thing, it's unbelievable.

Also, the man who spoke about the hurricane threat. That's a very real threat. And I don't know what year it happened, but the water came up from the East River onto the FDR Drive and flooded the cars. They were stalled in there, came up all the way on to East End avenue and down into the garages.

I don't know whether you considered that during this time but this is the condition. It's right where this garbage dump is. I'm telling you, these are things that maybe you don't know but it really happened.

3

1.

And the amount of water was incredible. And it wasn't a hurricane, it was just -- that's what it was. And when that map came out, it showed what can happen in this area.

1.0

In general, I'm very proud of what I heard here tonight, but I've seen this before. We have to get together and we have to go to the Mayor, who is just going on, and the City Speaker Christine Quinn, to see that we -- we're not just rich people who will lose the area. I lived here a very long time and I'm just an ordinary person and I don't have much income and I'm now finally a senior citizen.

But we shouldn't be left to fend for ourselves. And if you go over to Carl Schurz Park, you can see the Mayor doesn't live there except he has fund raisers, whatever he has, that cook there.

But really, we have to get together on this and try to stop it because it's a very, very serious thing. And we people who have lived here know about this traffic. And I don't believe one word you're saying about how there is going to be no pollution.

MR. SZARPANSKI: Thank you.
Brendan Ryan, No. 26.
MR. BRENDAN RYAN: Thank you.
I'm not going to repeat much of
what's been said.

The sad thing about this I think is it's an enormously frustrating process for everybody. For you all sitting there, for us sitting here. We live in a democracy. We're being barraged with scientific data.

I'm not a scientist, I'm not an environmentalist, I'm not an engineer. It's all rubbish. I don't understand any of it and I don't really care.

I have common sense. I do have common sense. And if you asked anybody with an ounce of common sense with putting this giant thing in the middle of this neighborhood, in the middle of this park, on a York Avenue that is already traffic clogged up with the FDR Drive, the buses, the trucks, the school buses, you wouldn't in a million years do it.

And what's frustrating is in a democracy what is driving this is politics. It's

Thank you.

(Audience participation.)

A VOICE: Next number.

MR. SZARPANSKI: State your name, please.

MS. ELLEN DIAMOND: Hi. I'm Ellen Diamond and I live on 93rd Street across from Stanley Isaacs.

I find myself sitting there and wanting to ask each one of you one at a time if the 91st Street building was not already there, would you pick this place?

Ms. Mariani?

MR. SZARPANSKI: I don't think we're engaging in hypothetical situations and questions here.

18 A VOICE: Bullshit.

19 MR. SZARPANSKI: Yes, it is.

20 MS. ELLEN DIAMOND: Okay. If you 21 can't answer, I understand. But I'd like you to 22 each think about. I'd like you to each think of 23 it.

Thank you. (Applause.)

(Applause.)

politics.

MR. BRENDAN RYAN: And it's a City Council -- in my judgment it's a City Council that is trying to be either politically correct or screw this neighborhood and is going forward with this. And you all, probably well-intentioned, but recognize you do work for this cabal, are no -- cannot not be influenced by that.

And it's really, I don't know what to do about it and most of these people here don't either. It's like we come to this meeting. We try our best to express points of view in a rational way. But it just defies rationality. It's stupid. It's just a dumb thing and I don't know what to do about it.

One -- two other thoughts.

There's an old phrase, build it and they will come. Anybody who tells me that this City, that has a capacity to -- by four-fold what we're guaranteeing we're going to be doing, is not going to get filled up over time is not a City resident. That's nonsense. It's just going to happen.

                                                                      (Stenotype) Reporter and Notary
                MR. SZARPANSKI: I heard you,
                                                        10
10
                                                                      Public within and for the State of
                                                        11
11
        yes.
                MR. BRENDAN RYAN: And then went
                                                        12
                                                                      New York, do hereby certify that the
12
                                                                       foregoing pages 1 through 135 taken
        like, what the shit. And I lost it before I was
13
                                                        13
        in the building because that is really not a fair
                                                        14
                                                                       at the time and place aforesaid, is
14
        photo. This is a ten-story monster that's going
                                                        15
                                                                       a true and correct transcription of
15
        in there and this would look like it's tucking in
                                                                       my shorthand notes.
                                                        16
16
17
        nicely behind Asphalt Green. It's not going to
                                                        17
                                                                          IN WITNESS WHEREOF, I have
                                                                       hereunto set my name this 3rd day
18
        happen.
                                                        18
                                                                     of May, 2007.
                                                        19
19
                Thank you.
20
                (Applause.)
                                                        20
                                                                                  MARC RUSSO
                MR. SZARPANSKI: All right. I've
                                                        21
21
                                                        22
        been told by the people who run this facility that
22
        we cannot stay. We have to leave.
                                                        23
23
                I urge you all, those who didn't get
                                                        24
24
        a chance to speak, to submit your comments or
                                                        25
25
                                                   134
                                 134
 1
 2
        questions in writing. And I also urge you to come
        and show up at the State DEC permit hearing.
 3
 4
                 Thank you.
 5
                 (At 9:04 p.m., the proceedings were
 6
        concluded.)
