# Pesticide Use by New York City Agencies in 2019

## EXECUTIVE SUMMARY

Local Law 54 of 2007 requires the New York City Department of Health and Mental Hygiene (DOHMH) to summarize pesticide use by City agencies annually. New York City agencies account for a small fraction of pesticides used in the city. New York State receives pesticide use data from all commercial applicators. New York City agencies' use in 2013 (the last year for which New York State data has been processed) accounted for an estimated 3% of the total volume of liquid pesticides, and 19% of the total pounds of solid pesticides applied within the five boroughs of New York City.

In 2019, 29 municipal agencies reported their pesticide use to DOHMH. This report summarizes pesticides applied by or on behalf of agencies on city-owned or -leased property.

Key findings include:

- Pesticides were applied 331,682 times by New York City agencies in 2019. Agencies used 7,119 gallons of liquid and 189,338 pounds of solid pesticide products (Table 1).
- As in previous years, roaches were the most commonly targeted pests in 2019, with rats, mosquitos, mice, and bed bugs making up the top 5 targets (by total number of applications in descending order) (Table 3).
- Most liquid pesticide products (51% by volume) used by City Agencies were fungicides, while most solid products (43% by weight) were rodenticides (Table 1). Excluding DOHMH mosquito larvicide conducted to prevent spread of West Nile Virus and other mosquito-borne diseases, increases the rodenticide percentage of solid pesticide products to over half (64% by weight).
- Insecticides
  - Insecticides were the most frequently applied type of pesticide, accounting for 69% of all applications (Table 1).
  - The volume of all liquid insecticides decreased 5% in 2019, compared with 2018 (Figure 2). This decline was due to a reduction in the number and volume of pyrethroids applications targeting roaches and bedbugs mostly at NYCHA (Figure 6).
  - Liquid pyrethroid products targeting cockroaches decreased 8% from 2018 to 2019, continuing a downward trend. Treatments targeting bedbugs also decreased 17% (Figure 6).
  - The use of solid mosquito larvicide by weight increased by 6% compared with 2018 after a steep increase in 2016 in response to Zika virus. Based on extensive mosquito surveillance in 2016 and 2017, the Health Department does not expect local Zika transmission.

- “Best Management Practices” (BMP) insecticide products (Appendix 3) include gel and bait insecticides with little potential for human exposure. They accounted for 50% of insecticide applications in 2019 versus only 36% in 2018. Much of this increase was due to multiple citywide applications of mosquito larvicide in sewer catch basins. BMP application amounts by weight to treat cockroaches increased by 36% in 2019 after more than doubling in 2017 and a slight decline in 2018 (Figure 4).
- Herbicides
  - Liquid herbicide product use remained low in 2019, relative to other liquid pesticides (Figure 2). Volume increased by 10%, but there was a 19% reduction in the use of glyphosate products, continuing a steady reduction in use since 2014 (Figure 3). Additionally the Parks Department is working to phase out the use of glyphosate products in areas of parks accessible to the public.
  - The use of solid herbicide products in 2019 increased 48% compared with 2018, driven by greater use of outdoor granular turf formulations, mainly on golf courses and large institutional lawns.
  - The Parks Department no longer applies pre-emergent herbicides near roadways or along walkways and perimeters of city parks.
- Rodenticides
  - Use of solid rodenticide products increased 31% by weight and 12% in the number of applications citywide, compared with 2018 (Figure 1). The DOHMH calibrates rodenticide use based on findings from neighborhood rat ‘indexing’.

# Pesticide Use by New York City Agencies in 2019

## I. BACKGROUND

When Local Law 37 was enacted on May 9, 2005, New York City became the largest municipality in the nation to regulate the use of pesticides on City-owned and -leased property. Local Law 37 established new requirements for pesticide use on property owned or leased by the City, including the prohibition of certain products, posting of warning notices prior to pesticide use, and the requirement that agencies report their pesticide use annually. With the enactment of Local Law 37, prohibitions from use were phased in for certain pesticides used by agencies or their contractors on City-owned and -leased properties. By November 2005, EPA Toxicity Category 1 (signal word “danger”) was prohibited. By May 2006, use of pesticides classified by the EPA as of July 19, 2004, as possible, probable or known human carcinogens was prohibited. Finally, by November 2006, use of pesticides classified by the State of California’s Office of Environmental Health Hazard Assessment as developmental toxicants as of March 4, 2005 was prohibited.

Local Law 37 exempted from prohibition several uses and products that posed little or no risk of human exposure, including rodenticides placed in tamper-proof containers or applied directly into rat burrows or inaccessible areas, containerized insect baits, and certain other types of insecticides, such as boric acid, silica, and diatomaceous earth. The New York City Department of Health and Mental Hygiene (DOHMH), under Local Law 37 authorization, further waived from prohibition the use of all insecticide gels containing the ingredients fipronil and hydramethylnon due to their effectiveness and low potential for human exposure. In addition, Local Law 37 empowered DOHMH to consider and grant requests for waivers from prohibition on a case-by-case basis. DOHMH maintains a webpage on Local Law 37 at <http://nyc.gov/health/l137> that includes a list of all waivers granted to agencies.

In October 2007, New York City enacted Local Law 54, which requires City agencies to report their pesticide use to DOHMH, and DOHMH to issue a summary report to the City Council and the Mayor. This is the thirteenth annual summary report and fulfills these requirements. City agencies have made significant improvements to the quality and delivery of pesticide use data since the enactment of Local Law 37. In 2006, only three agencies provided data in an electronic format that enabled summarization. In 2019, all agencies reported data electronically.

## II. SOURCES OF PESTICIDE USE DATA

New York City agencies are required to report to DOHMH their pesticide use by February 1 for the preceding calendar year. This report summarizes data received by the DOHMH for pesticides applied during calendar year 2019.

Source data for each pesticide application includes the product name, Environmental Protection Agency (EPA) registration number, the quantity used (expressed as either weight or volume), the method of application, the target pest, and the date and location the product was applied, and what agency or contractor applied it. DOHMH utilizes the EPA's pesticide

information system to link these data – by registration number – to determine a product's pesticide type and class, toxicity score, and its active ingredients. In addition, DOHMH links these data to the EPA Office of Pesticide Programs' List of Chemicals Evaluated for Carcinogenic Potential and the State of California's List of Chemicals Known to the State to Cause Cancer or Reproductive Toxicity, both available for download at <http://nyc.gov/health/ll37>.

### **III. METHODS AND LIMITATIONS**

Data in a variety of electronic formats were imported into a single database, where they were checked for quality, accuracy and validity. Weight and volumetric units were standardized to pounds and gallons, respectively. Products sold in solid form will primarily be reported by weight and liquids primarily by volume. Each record of data was assigned an agency identifier corresponding to the source agency. Data were analyzed using Microsoft SQL, Excel and Access. We analyzed data by pesticide type and chemical class, and report total numbers, pounds and gallons of applications for New York City, and by agency on whose behalf the pesticides were applied.

All reporting New York City agencies and their contractors provided data to DOHMH in electronic format. DOHMH launched and hosts an electronic reporting tool, the New York City Pesticide Use Reporting System (NYCPURS) that all agencies, contractors and licensed pest control applicators can register to use and allows for the importation of data maintained by other electronic systems.

Where DOHMH was able to evaluate the completeness of these records, summary statistics are reported by agency. It is still not possible to fully determine whether each agency was able to report each pesticide application. Many agencies depend upon contractors to maintain records of pesticides applied and may not be certain that all contractors have fully complied with Local Law 37 reporting requirements. There are some limitations in the data:

- Staff and contractor turnover have led to difficulty maintaining dependable and timely reporting at some agencies.
- Year-to-year variation in agency pesticide use can be due to many factors, including but not limited to changes in practice, budgets and the incidence of actual pest problems.
- Additionally the decisions on how to determine a single application, whether by entire buildings or by apartment or office suite, can significantly affect the reported amounts per applications and total number of applications in a year.

Despite the above-mentioned limitations, the data continue to improve over previous years with agency and contractor use of NYCPURS. Reporting errors, especially in reporting the incorrect units, were further reduced in 2019 due to continued increased use of the NYCPURS system with input standardization and consistent formatting.

In 2019, 99% of records were either imported or directly entered into the NYCPURS system, with remainder reported in electronic format outside of the NYCPURS system. We expect to see further improvements in the data over the next year as more agencies and contractors migrate existing electronic or paper systems to the NYCPURS system developed by DOHMH for

electronic recordkeeping. Additional information about NYCPURS is available at <http://nyc.gov/health/l137>.

## IV. PESTICIDE USE FINDINGS

### A. TYPES OF PESTICIDES USED BY AGENCIES

Four main types of pesticides were applied by agencies: rodenticides (products used to kill rodents); insecticides (to kill insects); herbicides (to kill plants); and fungicides (to kill molds and other fungi).

#### Rodenticides

Most rodenticides act as anticoagulants and all are acutely toxic if ingested in sufficient dosages. Common rodenticide active ingredients are bromadiolone, diphacinone, brodifacuum, zinc phosphide and warfarin. In 2019, DOHMH, Parks, and NYCHA continued and DOE began using dry ice (frozen CO<sub>2</sub>) as an alternative rodenticide in sensitive outdoor locations, such as nearby city parks and sensitive outdoor areas on school properties. DOHMH worked with federal and state regulators to receive approval for this new rodent control method in 2017, which has no risk of secondary poisoning to predatory animals. Some other common rodenticide products used by agencies in 2019 were: Contrac All-Weather Blox®, Contrac Rodenticide®, Weatherbloc Bait with Bitrex® and Difethialone Paste Place Packs®.

In 2019, a total of 83,803 pounds of rodenticides were applied by City agencies, accounting for 44% by weight of all pesticides applied, and 64% by weight when excluding mosquito larvicides, which are a significant proportion of insecticides by weight (Table 1).

#### Insecticides

A total of 2,528 gallons and 67,615 pounds of insecticides were applied by New York City agencies in 2019, accounting for 36% by volume, and 36% by weight of the total applications. Biological insecticides applied to target mosquito larvae account for 86% of insecticides by weight (Table 1). When those products are excluded, 9,774 pounds of insecticides by weight were applied, making up 7% of solid pesticides applied. Insecticides used by NYC agencies in 2019 fell largely into three classes of products: conventional pyrethrins and pyrethroids, organophosphates and carbamates, and “Best Management Practices” (BMP) products, which either use active ingredients with very low toxicity or involve formulation or application methods that minimize potential exposure and environmental spread.

#### *Pyrethrins, Pyrethroids, and Synergists*

Pyrethrins and pyrethroids are less acutely toxic than the organophosphate and carbamate pesticides they have largely replaced. Accidental poisonings from professional applications are very rare, though personal use of aerosol and fogging product formulations have been associated with acute exposures, poisonings and fires. Some pyrethroids may be respiratory allergens for sensitized people, including asthmatics. Though these chemicals have lower acute toxicity, there

is some emerging concern over the chronic neurotoxicity of pyrethrins, pyrethroids, and their synergists. EPA has classified pyrethrins, their synergists, and several pyrethroids as suspected human carcinogens. Pyrethrins and pyrethroids break down relatively quickly when used outdoors but persist longer when applied indoors.

Common pyrethroid active ingredients are cypermethrin, cyfluthrin, cyhalothrin, esfenvalerate, and deltamethrin. Pyrethrin and pyrethroid products used by agencies in 2019 include Whitmere Optem ME PT 600®, Steri-Fab®, Demand CS Insecticide®, Temprid SC Insecticide®, Suspend SC Insecticide® and Tempo SC Insecticide ®.

Together, pyrethrins and pyrethroids accounted in 2019 for 56% of total liquid insecticides applied by volume and 5% of solid insecticides by weight – 34% by weight when excluding mosquito larvicides. These products made up 46% of the total number of insecticide applications. There was a 5.3% decrease in pyrethroids applied by volume in 2019, largely due to decreased applications by NYCHA targeting roaches and bedbugs.

### ***Organophosphates and Carbamates***

Organophosphate and carbamate insecticides both function by inhibiting the neurotransmitter cholinesterase. Until EPA banned their use for most indoor applications in 1999 and 2000, organophosphates were the most heavily used class of insecticides. EPA also allowed the registrations for several carbamates to lapse.

The main organophosphate active ingredients used in 2019 were outdoor applications of chlorpyrifos, acephate, and trichlorfon on some golf courses, which are exempt from use prohibitions. The only carbamate active ingredients applied in 2019 were carbaryl and methomyl. Organophosphate and carbamate products applied by agencies in 2019 include Orthene PCO Formula II®, Chlorpyrifos 4E AG®, Dylox 420 SL Turf and Ornamental Insecticide®, Sevin SL Carbaryl Insecticide®, and Golden Malrin RF-128 Fly Killer ®.

These products remain a very small percentage of the insecticides used by city agencies, making up well below 1% of the total number of insecticide applications. Reports submitted by agencies showed that in 2019, the use of organophosphates and carbamates accounted for only 7% of total liquid insecticides applied by volume – a small increase from 2018 levels – and <1% of total solids by weight, even when excluding mosquito larvicides.

### ***“Best Management Practices” Insecticides***

The market offers several highly effective insecticide products with little or no potential risk for human exposure. These products include biological pesticides for mosquito control, and gels and baits for cockroach and other insect control. These products are the preferred insecticides used by agencies as part of their integrated pest management programs and are referred to as “Best Management Practices” Insecticides (BMP). A complete list of these products is listed in Appendix 3.

Common active ingredients for these products include boric acid, silica gel, diatomaceous earth, the bacteria *Bacillus sphaericus* and *Bacillus thuringiensis*, hydramethylnon, fipronil,

avermectin, and indoxacarb. Some of the products used by agencies for this reporting year were Maxforce Roach Bait F.05®, Redzone Bait®, Vectomax FG ®, Summit B.T.I. Briquets®, Vendetta Plus Cockroach Gel Bait ®, and DuPont Advion Cockroach Gel Bait®.

In 2019, 25% of the total insecticides applied by volume, and 93% by weight, were insecticidal dusts, gels and baits, or biological larvicides. Excluding mosquito larvicides, the totals equal 54% of solid insecticide products by weight. These products made up 36% of the total number of insecticide applications, a 66% increase in the number of applications compared with 2018, mostly due to citywide larvaciding in sewer catch basins.

## **Herbicides**

New York City agencies used herbicides in 2019 primarily for vegetation control in parks and for the maintenance of highways and street medians. The active ingredients most commonly used were glyphosate, dinitroanilines, chlorophenoxyacetic acids and ureas. A total of 810 gallons and 30,287 pounds of herbicides were applied in 2019, accounting for 11% of total volume and 16% of total weight overall, or 23% when excluding mosquito larvicing. (Table 1)

### ***Glyphosate***

Some of the most heavily used liquid herbicides were glyphosates, best known as Roundup® products. Glyphosate is a broad-spectrum, non-selective systemic herbicide that can be used throughout the growing season. In early 2015, the International Agency for Research on Cancer (IARC), a branch of the World Health Organization (WHO), changed the classification for glyphosate to a “probable human carcinogen.” However, a risk assessment by the European Food Safety Authority (EFSA) determined that glyphosate is “unlikely to pose a carcinogenic hazard to humans.”<sup>1</sup> Glyphosate shows little acute toxicity, but there has been growing concern that chronic exposure may increase risk of certain cancers. There is also some evidence that heavy use of the chemical in warm climates with soil high in certain toxic metals could present significant risk for developing severe kidney damage in agricultural workers. Currently no regulatory determination has been made by the federal EPA or NY State that would change the prohibition status of these herbicide products under Local Law 37. However, DOHMH encourages the pursuit of alternative weed control methods that would reduce the need for these herbicides. Glyphosate use had increased as agencies phased out the use of other herbicides prohibited under Local Law 37, but began to decline in 2013. In 2019, 31% of liquid herbicide use (by volume) contained glyphosate compared to 53% in 2016 (Figure 3).

### ***Dinitroaniline***

Dinitroaniline-based herbicides, which are often combined with fertilizers, are used early in the growing season as pre-emergents. They are of low acute toxicity to people, but several dinitroanilines are classified by EPA as suspected human carcinogens. Dinitroaniline herbicides

---

1. <sup>1</sup> European Food Safety Authority. Conclusion on the peer review of the pesticide risk assessment of the active substance glyphosate. *Efsa J* 2015;13:4302.

break down slowly. Common dinitroaniline active ingredients are pendimethalin, trifluralin, benefin, benfluralin and prodiamine. Agencies used only one dinitroaniline product in 2019 called Barricade 4FL ®. In 2013, the Parks Department chose to no longer use pendimethalin-containing herbicides, after requesting a waiver in previous years to use this herbicide.

### ***Chlorophenoxyacetic/Benzoic Acids***

The chlorophenoxyacetic acid herbicides are a family of related chemicals that are often combined in products. EPA classifies one member of this class of pesticides - mecoprop-p – as a suspected carcinogen. Common chlorophenoxyacetic acid active ingredients are 2,4-D, MCPP, mecoprop-p, dicamba and MCPA. Common chlorophenoxyacetic acid products used by agencies in 2019 were Riverdale Vanquish Herbicide® and Lesco Three-Way Selective Herbicide®. In 2019, the only uses of these products were applications along city highways by the DOT and a small number of applications on the city's golf courses, parks, and botanic gardens.

### ***Ureas***

Like dinitroaniline herbicides, urea herbicides are of low acute toxicity, but some may pose some chronic risks. Classification as a possible human carcinogen varies within the group. Diuron, a urea herbicide among the twenty most heavily used herbicides reported by commercial applicators in the private market in the City in 2013 (most recent data available), is classified by the EPA as a likely human carcinogen. Sulfonylureas are of low acute toxicity and have been so classified. All urea herbicides are highly persistent. None of the ureas used by NYC agencies in 2019 is classified by the EPA as a human carcinogen. Common urea active ingredients are sulfometuron methyl, metsulfuron-methyl and halosulfuron-methyl. Common urea products used by NYC agencies in 2019 were Sedgehammer®, Dupont Viewpoint Herbicide® and Nufarm Prosedge Selective Herbicide ®. In 2019, the only uses of these products were applications along city highways by the DOT and a small number of applications on the city's golf courses and botanic gardens.

### **Fungicides**

Many of the commonly applied fungicides are classified by EPA as suspected carcinogens. The potential for exposure can exist throughout the growing season, because many of these fungicides are also persistent, with half-lives measured in months and years. Degradation does not necessarily reduce the hazard, because some fungicides also have highly toxic breakdown products. Fungicides were most commonly applied by NYC on golf courses, and these applications are exempt from Local Law 37 prohibitions.

The active ingredients of fungicides commonly used in NYC in 2019 were chlorothalonil, thiophanate-methyl, propiconazole, azoxystrobin, iprodione and triadimefon. Common fungicide products applied in 2019 include Daconil Action®, Heritage Fungicide®, Bayleton Flo Turf and Ornamental Fungicide ® and Lesco Manicrue 6FL®.

Fungicides represented less than 1% of the total number of pesticide applications in 2019, but they made up 51% of total volume of liquid pesticides applied, 4% of total weight of solid products, and 6% of weight, after excluding mosquito larvicides (Table 1). Though the total volume of liquid fungicides reported has only increased slightly since 2012, they are now the most

heavily used type of pesticide reported by volume. Much of this increase could be due to a shift to a liquid formulation from a solid product (Figure 1 & 2).

## B. SUMMARY OF CITYWIDE PESTICIDE USE

Pesticide use can be measured and compared in a number of ways. Throughout the remainder of this report, we describe frequency of applications and quantity applied. Quantities for liquid applications are usually measured as volume in gallons. Quantities for solid applications are typically measured as weight in pounds. However, we included pesticides applied in totals by weight and volume based on the unit reported by City agencies or their contractors. In other words, if a pesticide typically reported in gallons was reported in pounds, it was included in the weight totals. Pesticides were applied a total of 331,682 times by New York City agencies in 2019, 17% more than in 2018 due to an increase in larvicide and rodenticide applications, with a 10% decline in the number of pyrethroid applications targeting roaches and bedbugs, primarily at NYCHA. The pesticides applied most frequently by New York City agencies were insecticides. Rodenticides were the most heavily used solid products (44% by weight), and fungicides were the most heavily used liquid (51% by volume). In 2019, 86% of the insecticides reported by weight were bacterial or insect growth regulator products designed to kill or halt the development of mosquito larvae in stagnant waters away from human contact. Excluding these products used as part of DOHMH mosquito-borne disease control programs, 7% of total solid pesticides by weight were insecticides and 64% were rodenticide. The majority of rodenticide applied by the City is placed directly into rat burrows and poses little risk of exposure to the public. Table 1 summarizes these findings of applications by pesticide type.

**Table 1. Total Applications Reported Applied by NYC Agencies in 2019, by Pesticide Type**

<b>Pesticide Type</b>	<b>Volume</b>		<b>Weight</b>			<b>Times Applied</b>	
	<b>Gallons</b>	<b>% of Total</b>	<b>Pounds</b>	<b>% of Total</b>	<b>% w/o Larvicide</b>	<b>Number</b>	<b>% of Total</b>
Rodenticide	11	0.2%	83,803	44.3%	63.7%	100,389	30.3%

Fungicide	3,606	50.6%	7,630	4.0%	5.8%	1,002	0.3%
Other	165	2.3%	4	0.0%	0.0%	86	0.0%
	<b>7,119</b>		<b>189,338</b>			<b>331,682</b>	

Table 2 lists the ten most frequently used products for each pesticide type on New York City owned or leased property in 2019. For each, we list the total volume, weight and number of applications, as well as the active ingredient(s), the EPA toxicity category, whether the product is considered a known, possible or suspect carcinogen by EPA, and whether the product is listed by the State of California as a reproductive or developmental hazard. For this and subsequent product tables, the toxicity category refers to the EPA's assigned label warning to indicate the degree of acute toxicity from oral, dermal and inhalation exposures on a scale from 1 to 4. Toxicity Category 1 indicates pesticides considered highly toxic and whose labels require the signal word, "Danger". Toxicity Category 2 products are considered moderately toxic and product labels carry the word "Warning". Toxicity Category 3 products are considered slightly toxic, while Toxicity 4 products

are considered relatively non-toxic, and both carry the signal word “Caution.” A complete list of products used by New York City by pesticide type is included in Appendix 1.

Other Rodents	-	0.005	1	0%
<b>Totals:</b>	<b>7,119</b>	<b>189,338</b>	<b>331,682</b>	

The level of completeness of city agency pesticide reporting has improved dramatically over the past ten years, making analysis of trends in pesticide use possible since 2008. Figures 1 and 2 show

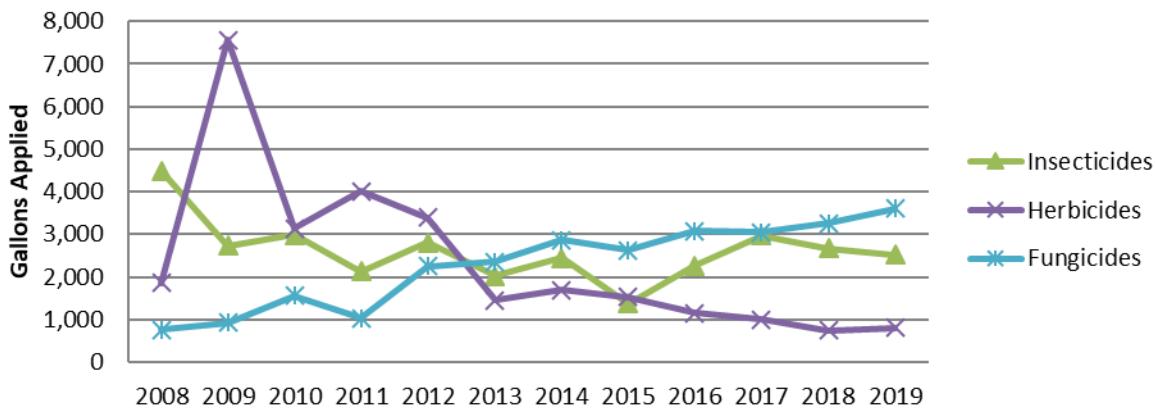

trends from 2008 through 2019 in use of pesticides by city agencies by type of pesticide, with solid and liquid products reported by weight and volume, respectively.

In Figure 1, DOHMH mosquito control program larvicides are charted separately from other insecticides, because they represent a large proportion of city insecticide use and their year-to-year use varies more with weather than other insecticides. There was a consistent decline in larvicide use until an increase in 2016 due to the broader larvicide application plan in response to the threat of Zika virus. Larvicide use has now returned to a level similar to previous years (Figure 1). Use of solid rodenticide products showed a considerable increase (31% by weight) from 2018 to 2019, and there was an overall 22% increase in amount of all pesticides reported by weight. Solid herbicide by weight increased first in 2016 and jumped again in 2019 due to the use of outdoor granular turf formulations that include fertilizer (adding to the product weight), mainly on golf courses and large institutional lawns (Figure 1).

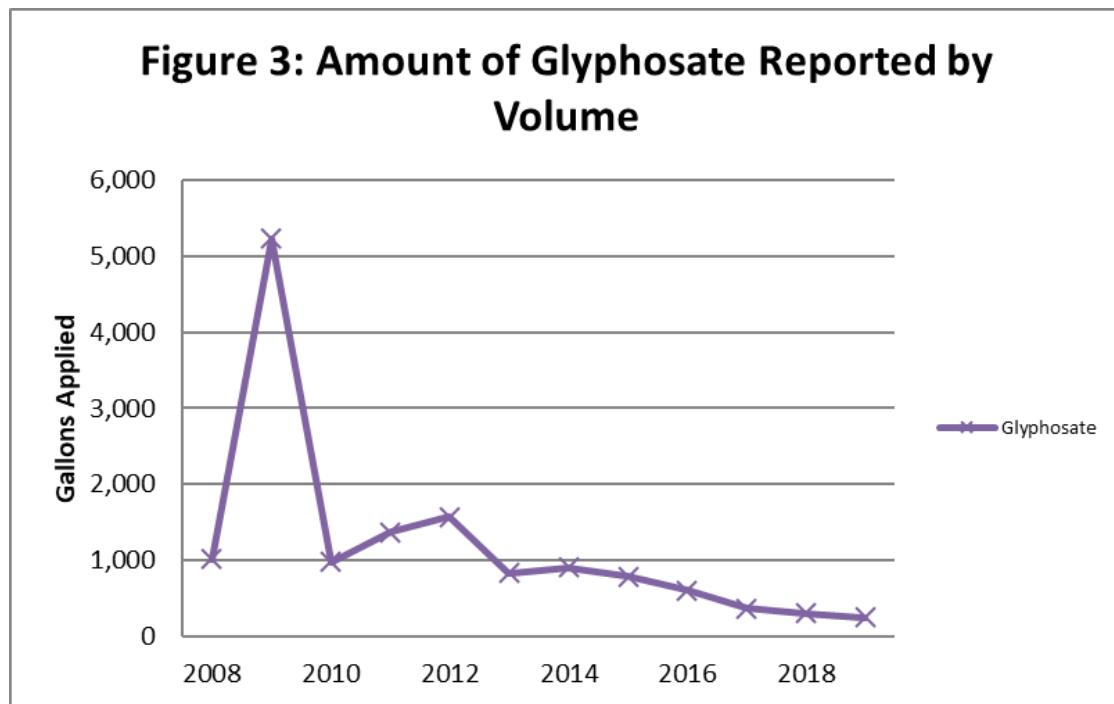

**Figure 1: Pesticides Applied by City Agencies Reported by Weight**

**Figure 2: Pesticides Applied by City Agencies Reported by Volume**

Rodenticides and mosquito larvicides are not included in Figure 2 as those products are almost exclusively solid formulations reported by weight. In 2019, liquid herbicide use increased 9% by volume (Figure 2) from 2018 despite a 19% decrease in gallons of glyphosate applied (Figure 3). Overall, there has been an 84% decline in liquid herbicide levels applied since 2012. The high volume of herbicide (mostly glyphosate) used in 2009 was due in part to large discreet projects by the Parks Department to control invasive species in remote, often wooded, parkland.

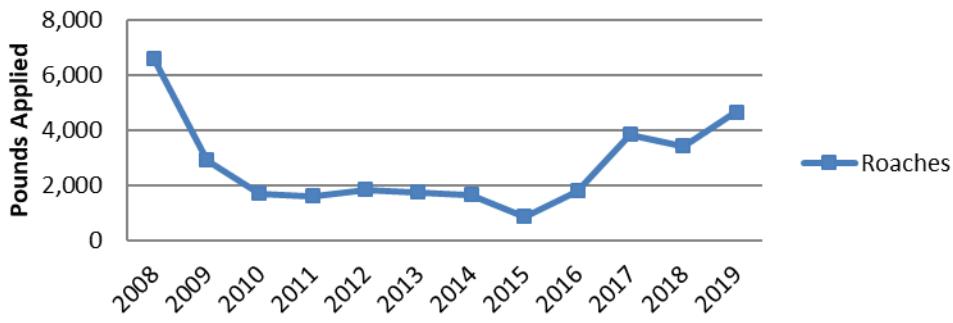

There was also a 5% decrease in liquid insecticide use, reported by volume, due to a reduction at NYCHA of roach and bedbug applications, discussed below. This reduction was seen even as more liquid BMP insecticides, the preferred treatment, are being reported by volume (Appendix 1 & 3). From 2008 to 2019, there was a 44% decrease in the volume of liquid insecticides used, with much of the reduction happening between 2008 and 2009 (Figure 2).

### Use of spray formulations vs. Best Management Practices

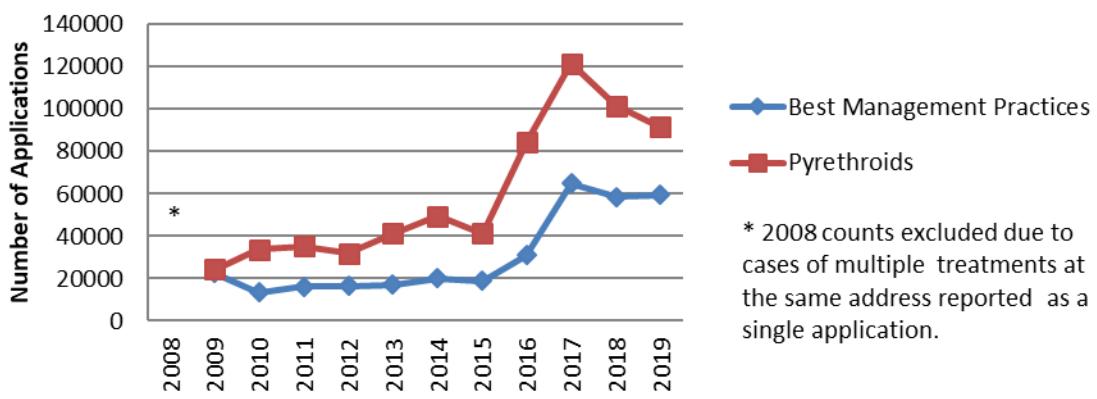

After a large reduction in BMP products to combat roaches from 2008 to 2010, the reported use of these products had leveled off through 2015. Continuing an upward trend since then, in 2019 there was a 36% increase in BMP products targeting roaches (Figure 4).

**Figure 4: Amount of Best Management Products by Weight to Treat Roaches**

There was a 10% decrease in the number of pyrethroid applications to treat roaches from 2018 to 2019, while the number of applications of BMP products remained steady after the number of applications more than doubled in 2017 (Figure 5). This decrease in pyrethroid applications corresponded to an 8% lower volume of applied pyrethroids. Meanwhile the BMP amount by weight increased by 36%, continuing an upward trend. (Figure 6 and Figure 4).

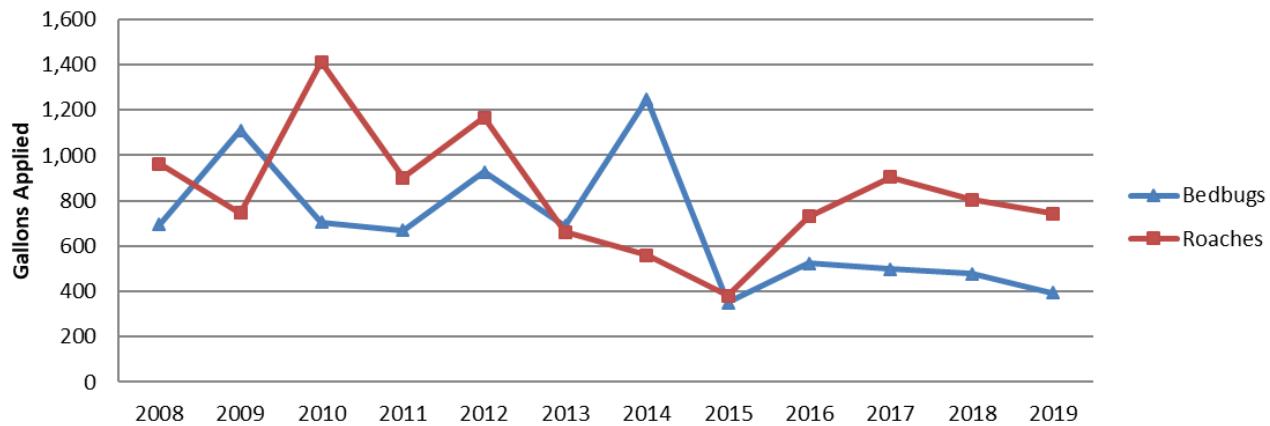

**Figure 5: Number of Applications of Insecticide to Treat Roaches**

### Bed Bugs vs. Roaches

Use of pyrethroid spray products targeting roaches decreased 8% by volume, and number of applications decreased 10% from 2018 to 2019 (Figure 6 and Figure 5). There was also a 17% decrease in gallons of pyrethroids used by city agencies to treat bed bugs from 2018 to 2019 (Figure 6). Citywide, the number of pyrethroid applications to treat bed bugs decreased 15% in 2019, due to a decrease in applications for bed bugs reported by NYCHA (data not shown). Total volume of pyrethroid use for control of bed bugs from 2008 to 2019 has remained low since 2015 compared with previous years, while volume for cockroaches started to decline in the past two years.

**Figure 6: Amount of Pyrethroids Reported by Volume to Treat Bed Bugs and Roaches**

## Rodents

Rodenticide use increased by 31% in 2019 by weight (Figure 1). There was also an increase of 12% in the number of rodenticide applications. This variability year to year is due to the Neighborhood Rat Reduction program funded in 2017 and to the trials of and subsequent increased use of a new rodenticide, “Rat Ice”.

## Mosquitoes

Mosquito control measures include larvicing (killing larvae) and adulticiding (killing flying adults). The DOHMH Vector Control program applied 57,841 pounds of mosquito larvicide and 2,413 pounds of adulticide in 2019. Larvicide reported by weight increased by 6% in 2019 (Figure 1). The agency will continue to monitor mosquito populations across the five boroughs, especially the populations that commonly carry mosquito-borne illnesses such as the West Nile and Zika viruses. The amount of adulticide applied by DOHMH has varied year to year, depending on weather and severity of mosquitoes. In 2019, the volume of liquid adulticide used decreased 47% compared with 2018 due to decreased mosquito activity (data not shown).

## D. SUMMARY OF AGENCIES’ PESTICIDE USE

For each reporting agency, we summarize total pesticide use by pesticide type, followed by a listing of pesticide products used by reporting City agencies.

### ***Administration for Children’s Services***

The New York City Administration for Children's Services (ACS) provides for the protection of New York City's children from abuse and neglect. Along with their community partners, ACS provides neighborhood-based services to help ensure children grow up in safe, permanent homes with strong families. The Department of Juvenile Justice (DJJ) was merged into this agency in December 2010. The agency contracts for pest management services. Table 4 summarizes pesticide use by pesticide type. Table 5 lists all pesticide products used by ACS in 2019, primarily at facilities previously under management of the DJJ.

**Table 4: Types of Pesticides Used by ACS in 2019**

Pesticide Type	Volume		Weight		Times Applied	
	Gallons	% of Total	Pounds	% of Total	Number	% of Total
Rodenticide	0.0	0.0%	1.5	92.4%	7	25.9%
Insecticide	0.0	0.0%	0.1	7.6%	20	74.1%
<b>Totals</b>	<b>0.0</b>		<b>1.6</b>		<b>27</b>

## **Aging, Department for the**

The Department for the Aging (DFTA) promotes, administers and coordinates the development and provision of services for older New Yorkers to help them maintain their independence and participation in their communities. DFTA contracts with non-profit senior service providers to administer 76 different city-owned and city-leased sites, 33 of which engage in food preparation or storage. These facilities are privately operated and contract individually with private vendors for pest control to address typical structural urban pest issues, such as roaches, rodents, and flies. Pesticide use arranged by privately operated facilities with subcontractors is not required to be reported and is not included in this report, which includes only pest management services contracted directly by DFTA. The agency reported that no pesticides were used during 2019.

## **Brooklyn Public Libraries**

The Brooklyn Public Library (BPL) serves Brooklyn's 2.5 million residents, offering thousands of public programs, millions of books and use of more than 850 free Internet-accessible computers at its 66 locations. Contractors are hired for pest management as needed and the major pest infestations are roaches and mice. Table 6 summarizes pesticide use by pesticide type. Table 7 lists all pesticide products used by BPL in 2019.

**Table 6: Types of Pesticides Used by BPL in 2019**

Pesticide Type	Volume		Weight		Times Applied	
	Gallons	% of Total	Pounds	% of Total	Number	% of Total

## **Chief Medical Examiner**

The Office of Chief Medical Examiner (OCME) is responsible for investigating deaths in unusual circumstances, approving requests for cremation, providing additional forensic services to support criminal investigations, and managing all functions of the City mortuary. The agency contracts for pest control through the citywide contract administered by DCAS. Table 8 summarizes pesticide use by pesticide type. Table 9 lists all pesticide products used by OCME in 2019.

## **City University of New York**

The City University of New York (CUNY) is the nation's largest urban public university and consists of 23 institutions. The University serves more than 260,000 degree-credit students and 273,000 adult continuing and professional education students. Individual institutions contract for pest control services through private vendors. The data reports were received from 15 colleges, Baruch College, Borough of Manhattan Community College, Brooklyn College, Bronx Community College, City College, College of Technology, The Graduate Center, Hostos Community College, John Jay College, Kingsborough Community College, La Guardia Community College, Lehman College, Medgar Evers College, Queens Borough Community College, and York College. Table 10 summarizes pesticide use by pesticide type. Table 11 lists all pesticide products used by CUNY in 2019.

## ***Citywide Administrative Services, Department of***

The Department of Citywide Administrative Services (DCAS) supports government recruitment, oversees surplus city-owned property and the commercial real estate portfolio for the City, and provides supplies and equipment. Of the 14,000 city-owned lots, DCAS is directly responsible for the management of approximately 2,400 of these properties. DCAS cleans and maintains 53 DCAS-managed buildings with 13,365,398 square feet of space throughout the city. These include City Hall, the four Borough Halls, the Manhattan and Brooklyn Municipal Buildings, and all state and municipal court buildings. DCAS manages the citywide contract for pest management services that city agencies can buy into. This contract was effective from May 1, 2017 to April 30, 2019. A new contractor has since replaced the previous citywide contractor. Several agencies are housed in DCAS managed buildings, and the DCAS report reflects these applications. Table 12 summarizes pesticide use by pesticide type. Table 13 lists all pesticide products used by DCAS in 2019.

**Table 12: Types of Pesticides Used by DCAS in 2019**

## ***Correction, Department of***

The Department of Correction (DOC) is responsible for New York City's inmates, housing the majority of them on Riker's Island. It oversees 44 facilities, including eleven correctional

facilities which have food preparation areas, laundries, residential areas for inmates, and office space. DOC does not employ contractors for pest management purposes but relies on in-house pest control professionals and works with DCAS in maintaining certain facilities. Table 14 summarizes pesticide use by pesticide type. Table 15 lists all pesticide products used by DOC in 2019.

**Table 14: Types of Pesticides Used by DOC in 2019**

Pesticide Type	Volume		Weight		Times Applied

## ***Education, Department of***

The Department of Education (DOE) provides primary and secondary education to more than 1 million pre-kindergarten to grade 12 students. Pest management at all New York City public schools is overseen by their Pest Control Unit. There are approximately 20 in-house licensed pest management professionals who conduct monthly monitoring inspections and respond to pest problems for approximately 900 schools. DOE contracts with several pest management companies

to provide services for an additional 300 schools. NYS Department of Environmental Conservation (DEC) more strictly regulates pesticide use at schools. More information is available here: <https://www.dec.ny.gov/chemical/41822.html> Table 16 summarizes pesticide use by pesticide type. Table 17 lists all pesticide products used by DOE in 2019.

**Table 16: Types of Pesticides Used by DOE in 2019**

### ***Environmental Protection, Department of***

The Department of Environmental Protection (DEP) has more than 1,700 facilities upstate and in NYC. These include water pollution control plants, well stations, pumping stations, shafts, chambers, reservoirs, aqueducts, tunnels, gate houses, office space, garages, repair shops, maintenance shops, and police precincts within New York City. DEP contracts for some pest control services and employs approximately 10 licensed applicators for maintenance of roadways and other infrastructure in the watershed. Table 18 summarizes pesticide use by pesticide type. Table 19 lists all pesticide products used by DEP in 2019.

**Table 18: Types of Pesticides Used by DEP in 2019**

## **Fire Department**

The Fire Department of New York City (FDNY) is responsible for the protection against fires and fire hazards, and providing emergency medical services, technical rescue and response to various biological, chemical and radioactive hazards. FDNY manages some 350 facilities throughout the City and contracts for pest control services. Table 20 summarizes pesticide use by pesticide type. Table 21 lists all pesticide products used by FDNY in 2019.

**Table 20: Types of Pesticides Used by FDNY in 2019**

## Health + Hospitals

New York City Health + Hospitals (H+H) is an \$8.5 billion integrated healthcare delivery system with its own 522,000 member health plan, MetroPlus, and is the largest municipal healthcare organization in the country. H+H serves 1.1 million New Yorkers every year and more than 382,000 are uninsured. H+H provides comprehensive medical, mental health and substance abuse services through its more than 70 locations including 11 acute care hospitals, five skilled nursing facilities, and six large diagnostic and treatment centers. H+H Health and Home Care also provides in-home services for New Yorkers. Pest control protocols differ among facilities, because each is managed separately. A few facilities have pest control professionals on staff, but the

majority rely on outside contractors. Table 22 summarizes pesticide use by pesticide type. Table 23 lists products by pesticide types.

## ***Health and Mental Hygiene, Department of***

The Department of Health and Mental Hygiene (DOHMH) protects and promotes the health and mental well-being of all New Yorkers. The Bureau of Veterinary and Pest Control Services at DOHMH protects the public from animal- and vector-borne diseases, and other hazards, including those that result from uncontrolled or unregulated rodents and other animals,

and from mosquito-borne pathogens. Two programs, Pest Control Services (PCS) and Vector Surveillance and Control (VSC) have pest management responsibilities. PCS focuses on rodent control – performing inspections, cleanups and treatments of both private and public property. Currently, PCS employs approximately 40 pest management professionals to bait properties that have signs of active rodents with rodenticide placed either directly in rat burrows or in tamper-resistant bait stations. The Healthy Homes Program uses a private contractor to provide high quality pest control in the homes of children with asthma. Pest management in facilities operated by DOHMH is done through private contractors. Though Local Law 37 requires the reporting of pesticide use on only public property, applications on private property done by PCS are included in Tables 24 and 25. VSC is charged with mosquito management and uses licensed pest management staff and outside contractors. Table 24 summarizes pesticide use by pesticide type. Table 25 lists all pesticide products used by DOHMH in 2019.

**Table 24 Types of Pesticides Used by DOHMH in 2019**

### ***Homeless Services, Department of***

The Department of Homeless Services (DHS) manages homeless shelters and dormitory facilities across the City. Of these, six are Family Services operated, five provide dormitory facilities for families with children, one facility – Preventative Assistance and Temporary Housing (PATH) – is an intake facility, and five adult facilities provide housing for men. DHS also operates and manages warehouses. Pest management services, which primarily address rodent and cockroach infestations, are provided by an outside contractor. Table 26 summarizes pesticide use by pesticide type. Table 27 lists all pesticide products used by DHS in 2019.

**Table 26: Types of Pesticides Used by DHS in 2019**

## Housing Authority

The New York City Housing Authority (NYCHA) manages more than 2,200 residential buildings and more than 170,000 apartments, as well as office space and grounds that cover approximately 2,300 acres. NYCHA currently has a staff of more than 100 pest management professionals who perform routine inspections and treatments, carry out specialized intensive IPM interventions, apply pesticides, and respond to complaints and requests from other agencies. NYCHA staff members regularly address a range of insect and rodent problems, including interior rodents, cockroaches and bedbugs, and exterior rats, and weeds. Mosquito control and supplemental treatments are done by vendor services. Table 28 summarizes pesticide use by pesticide type on NYCHA property. Table 29 lists the products used by NYCHA in 2019. Please note the data in the column marked Volume (Gals) in Tables 28 and 29 reflect the amount of liquid insecticide when diluted with one gallon of water, not the amount of insecticide used during each application.

**Table 28: Types of Pesticides Used by NYCHA in 2019**

## Housing Preservation and Development

Housing Preservation and Development (HPD) oversees occupied and vacant residential and commercial buildings, vacant lots, and a limited number of agency offices. In addition, its Emergency Repair Program occasionally encounters and responds to rats and fleas in occupied private buildings. HPD has no certified applicators on staff and contracts for pest management services. Table 30 summarizes pesticide use by pesticide type. Table 31 lists all pesticide products used by HPD in 2019.

**Table 30: Types of Pesticides Used by HPD in 2019**

## Human Resources Administration

The New York City Human Resources Administration/Department of Social Services (HRA/DSS) provides temporary help to individuals and families with social service and economic needs to assist them in reaching self-sufficiency. HRA serves more than 3 million New Yorkers through essential and diverse programs and services. HRA/DSS has numerous offices and public service centers throughout the 5 boroughs. Table 32 summarizes pesticide use by pesticide type. Table 33 lists the products used by HRA/DSS in 2019.

**Table 32: Types of Pesticides Used by HRA in 2019**

## New York Public Libraries

The New York Public Library (NYPL), through its 85 branches libraries services residents in the boroughs of Manhattan, the Bronx and Staten Island. Pest management is provided by private contractors. No application data was provided by NYPL for 2019.

## Parks and Recreation

New York City has 28,000 acres of parks, playgrounds, athletic fields, natural areas, recreational facilities, comfort stations, beaches, historic buildings, and parkways maintained by the Department of Parks and Recreation (DPR). The major pest issues facing DPR are weeds (including weed shrubs and weed trees) and rodents. Rarer infestations of exotic insect pests and diseases, often targeting trees, also occur. To address these, DPR employs 104 certified pesticide applicators. Herbicides account for the largest share of DPR's total pesticide use. Contractors are hired for pest management when peripheral rodent problems arise on capital projects.

DPR reports include pesticides applied on all city-owned golf courses. Local Law 37 exempts these locations from pesticide prohibitions. These tables also include data from sister organizations that operate on DPR property, such as zoos, conservancies, and botanic gardens. Table 34 summarizes pesticide use by pesticide type. Table 35 below lists for each pesticide type, all products used, unless there were more than 10, in which case the 10 most frequently applied products are listed. Appendix 2 includes a complete product listing for DPR.

**Table 34: Types of Pesticides Used by DPR in 2019**

## Police Department

The Police Department (NYPD) is committed to providing a safe and secure environment for the public. It manages 76 precincts, 12 Transit Districts, nine Housing Police Service Areas, and other investigative and specialized units. The major pest issues facing its facilities are structural pests and are managed by private contractors as needed. Table 36 summarizes pesticide use by pesticide type. Table 37 lists all pesticide products used by NYPD in 2019.

**Table 36 Types of Pesticides Used by NYPD in 2019**

## Queens Public Libraries

The Queens Public Library (QPL) manages 64 libraries, as well as indoor, outdoor and office facilities. Contractors are hired for pest management as needed and the major pest infestations are roaches and mice. Table 38 summarizes pesticide use by pesticide type. Table 39 lists all pesticide products used by QPL in 2019.

## **Sanitation, Department of**

The Department of Sanitation (DSNY) manages garages, office buildings, transfer stations, and various publicly-owned lots throughout the city. Because of the nature of the agency's work – managing garbage – pest problems are endemic at some facilities, so DSNY employs two certified pesticide applicators who make routine visits to facilities and respond to emergency calls. DSNY also contracts for weed control on some of the City's rights-of-way. Table 40 summarizes pesticide use by pesticide type. Table 41 lists the products used by DSNY.

**Table 40: Types of Pesticides Used by DSNY in 2019**

## **Taxi and Limousine Commission**

The Taxi and Limousine Commission (TLC) licenses and regulates more than 50,000 vehicles and approximately 100,000 drivers, performs safety and emissions inspections of the more than 13,000 medallion taxicabs three times each year, and holds numerous hearings for violations of City and TLC rules and regulations, making it the most active taxi and limousine licensing regulatory agency in the United States. The agency contracts for pest control through the citywide contract administered by DCAS. TLC reported no pesticide applications in 2019.

## **Transportation, Department of**

The Department of Transportation (DOT) has a staff of more than 4,000 that oversees one of the most complex urban transportation networks in the world. They manage approximately 5,800 miles of streets, sidewalks, and highways and 789 bridge structures, including six tunnels. They operate the Staten Island Ferry, oversee ferry operations on City-owned piers and operate approximately 75 facilities throughout the City. DOT is responsible for pest management at maintenance yards, lots, and agency offices throughout the city, as well as on rights-of-way along city highways. DOT is also contracted by New York State to provide right-of-way maintenance on state highways within city borders. Table 42 summarizes pesticide use by pesticide type. Table 43 lists all pesticide products used by DOT in 2019.

**Table 42: Types of Pesticides Used by DOT in 2019**
