

**NEW YORK CITY DEPARTMENT OF
HEALTH AND MENTAL HYGIENE**

Ashwin Vasani, MD, PhD
Commissioner

Report on the provision of medical services related to reproductive health care - 2024.

The Bureau of Vital Statistics releases an annual report for the most up to date data collected by the New York City (NYC) Department of Health and Mental Hygiene (Health Department), the most recent report is for 2021 City statistics. These are the data reported herein; the Health Department does not collect and publish any additional data on reproductive health care services.

The Health Department collects and publishes information on births (“live births”) and abortions (“induced terminations”). For data regarding live births and abortions by borough of residence and age for NYC residents and non-residents, see Table 1. For data regarding abortions by age and racial/ethnic groups for NYC residents and non-residents, see Table 2. For data regarding live births and abortions by racial/ethnic groups, age, and borough of residence for NYC residents only, see Table 3.

The Health Department is unable to maintain a list of licensed medical providers that provide reproductive health care services. New York State Department of Health has oversight over licensure of medical providers and maintains current records related to providers in NYC and State. Reproductive health care encompasses a broad array of physical and mental health services. The NYC Health Department does not have the capacity or resources to assess the ability of licensed medical providers in the city to accommodate individuals seeking medical services related to reproductive health care. However, according to our 2022 community health survey, 97% of NYC women who have needed contraception or abortion services in the last 12 months were able to access it.

PREGNANCY OUTCOMES

Table 1. Live Births and Induced Terminations of Pregnancy, Overall and by Borough Of Residence and Woman's Age, New York City, 2021*

	Total	4,963	10.1	1,225	13.1	6,509	69.8

Population data used to calculate rates are 2021 estimates from the US Census Bureau. See Technical Notes: Population.

*See Technical Notes: Population, Vital Event Rates.

†The denominators for total rates are females ages 15-44, except for total birth rates, which are the entire population.

‡Counts for females ages 15 to 19 are the number of events to females age <20; counts for females ages 40 to 49 are the number of events to females ages 40 and over. See Technical Notes: Vital Event Rates.

§Includes all events occurring in NYC regardless of residence.

||Other/unknown race and ethnicity are excluded.

¶Numbers and rates are limited to events occurring in NYC to NYC residents only.
