One Attendant dropped.  
Six Cleaners (female) appointed.

Respectfully,

HENRY S. THOMPSON,  
Commissioner of Public Works.

DEPARTMENT OF WATER SUPPLY, GAS  
AND ELECTRICITY.

REPORT FOR THE YEAR ENDING DECEMBER 31, 1906.

Department of Water Supply, Gas and Electricity,  
Commissioner's Office, Nos. 13 to 21 Park Row,  
City of New York, January 8, 1908.

Hon. GEORGE B. McCLELLAN, Mayor, New York:

Sir—I beg to submit the report of the Department of Water Supply, Gas and Electricity for the year 1906, embodying several reports of the Deputy Commissioners and Division Chiefs, wherein the transactions and work accomplished by the Department are referred to and described in detail.

The report of Chief Engineer I. M. de Varona shows the actual cost of delivery, distribution and maintenance of the water supply for the entire City, making reference to Brooklyn water system for the first six months of the year only, during which time it was under his direct charge and supervision, he being superseded by John W. McKay, now Acting Chief Engineer for the Borough of Brooklyn.

Brooklyn's water supply was better than in some years previous. The Department was able to obtain additional water through the employment of improved well machinery and by utilizing sources of supply which developed during the construction of the infiltration gallery. While there was no actual reserve on hand, the yield of the different sources of supply was sufficient to meet the requirements of the Borough.

It is gratifying to note that the revenue derived from the sale of water in the Borough of Manhattan was the greatest in the history of the City, exceeding by more than \$500,000 the largest amount ever previously received. In addition to this accomplishment, a house-to-house canvass has been made of practically the entire Borough, and as a result there were 8,500 water meters installed in business houses. Each of the other Boroughs shows an increase in collections, and has also enforced strict compliance with the Charter regulations with respect to metering water furnished for business use.

Engineer C. F. Lacombe's report is the first comprehensive statement relating to public lighting which, I believe, has been made since consolidation, and shows precisely the actual cost of each system of lighting.

The reports of Electrical Engineers Frank E. Brown, referring to the Boroughs of Manhattan and The Bronx, and H. S. Wynkoop, for the Borough of Brooklyn, and Inspectors Burke and Sheridan, for the Boroughs of Queens and Richmond, respectively, make reference to the work carried on by the electrical division of this Department, showing the vast amount of work accomplished with the limited force of Inspectors, and also give some idea of the increased use of electricity as a means of illumination and power.

Respectfully,

JOHN H. O'BRIEN, Commissioner.

## I.

## OFFICE OF CHIEF ENGINEER.

Department of Water Supply, Gas and Electricity,  
Office of Chief Engineer, Nos. 13 to 21 Park Row,  
City of New York, March 18, 1907.

Hon. JOHN H. O'BRIEN, Commissioner:

Sir—I beg to report herewith on the condition of the water supply in the Boroughs of Manhattan, The Bronx, Queens and Richmond, for the year ending December 31, 1906; work done during the year on the supply and distribution system; expenditures provided for under the Tax Levy Budget, as well as under the appropriation made by Bond issues, and balances remaining on January 1, 1907.

On July 13, 1906, the work of the Engineer's Bureau in Brooklyn was separated from that of the other Boroughs and placed in charge of an Acting Chief Engineer. The first two quarterly reports for 1906, relating to the Borough of Brooklyn, were therefore prepared and submitted by me, so that I shall simply make hereafter a brief reference to the work done under my charge in that Borough, during the first half of the year, and to the general plan of development of which it formed part.

I have adhered to the plan outlined to embody in these reports a detailed record of the work done and cost thereof. The gathering and tabulation of the data required to carry out this plan have satisfactorily progressed, and an improvement in this respect will be apparent.

## BOROUGH OF MANHATTAN AND THE BRONX.

Manhattan Supply Company—Furnishing and delivering agricultural, mechanics' and hardware supplies.....	\$281 51
George T. Montgomery—Furnishing and delivering agricultural, mechanics' and hardware supplies.....	\$100 51
Hugh L. Fox—Furnishing and delivering agricultural, mechanics' and hardware supplies.....	\$543 33
Robert C. Ogden—Furnishing and delivering agricultural, mechanics' and hardware supplies.....	\$309 32
Timothy D. Gleason—Excavating and removing rock in hydrant trenches, etc.....	\$5,120 00
M. J. Drummond & Co.—Furnishing and delivering double nozzle standard New York hydrants, lead lined iron pipe, unions, elbows and couplings.....	\$4,567 75
John Fox & Co.—Furnishing and delivering single nozzle "A" hydrants and gate valves.....	\$5,700 00
Matthew M. O'Brien—Furnishing, delivering and setting double nozzle standard New York hydrants.....	\$17,437 75
Nicholas L. Stokes—Furnishing, delivering and storing anthracite coal..	\$34,020 00
E. F. Schroeder—Furnishing and delivering and laying water mains in Columbus and Ninth avenues, etc.....	\$519,745 00
John L. Florence—Furnishing materials, repairing and restoring artificial stone sidewalks and curbing and resetting natural stone curbing..	\$1,710 00
John Cornwell, Jr.—Furnishing, delivering and laying 12-inch flexible joint, subaqueous water mains.....	\$47,439 00
John Fox & Co.—Furnishing and delivering tapping cocks, drills, nozzles, etc.....	\$1,608 00
Candee, Smith & Howland Company—Furnishing and delivering lime, sand, cement, etc.....	\$683 60
John Fox & Co.—Furnishing and delivering 36-inch gate valves.....	\$2,972 00
H. Mueller Manufacturing Company—Furnishing and delivering tapping cocks, drills, nozzles, etc.....	\$4,344 11
John Fox & Co.—Furnishing and delivering cast iron water pipes and special castings.....	\$45,303 35
C. Daly—Furnishing and delivering anthracite and bituminous coal, coke and cordwood.....	\$1,198 50
U. T. Hungerford Brass and Copper Company—Furnishing and delivering pig lead.....	\$4,536 00
Gallo & Pettelli—Furnishing, delivering and laying water mains in Jerome and Davidson avenues, etc.....	\$753,151 00
Gallo & Pettelli—Furnishing, delivering and laying 48-inch water main in Seventh avenue.....	\$312,537 00
J. P. Duffy & Co.—Furnishing and delivering filter sand, fire brick, etc..	\$896 32
John Fox & Co.—Furnishing and delivering wood plugs, hydrant eyes, etc.	\$2,754 50
John Fox & Co.—Furnishing and delivering stop-cocks, hydrants, etc..	\$17,597 50
Cavanagh Brothers & Co.—Furnishing and delivering cotton waste, yarn, etc.....	\$2,674 05
Frank K. D'Ossone—Furnishing, repairing, placing and emptying vault pans.....	\$2,080 80
Manhattan Supply Company—Furnishing and delivering cotton waste, etc.	\$230 40
Charles S. Richards—Furnishing and delivering lubricating and illuminating oils, etc.....	\$2,847 75
Borne, Scrymser Company—Furnishing and delivering lubricating and illuminating oils, etc.....	\$495 75
Florence Iron Works—Furnishing and delivering double nozzle, standard New York hydrants and fittings.....	\$11,453.25
William E. Burke—Furnishing and delivering engineers' and draughtsmen's supplies.....	\$1,392 07
Louis D. Gregory—Furnishing, delivering and laying water mains in Boscobel, College, Grand, etc., avenues.....	\$112,435 30
William E. Burke—Furnishing and delivering steam and hydraulic packing.....	\$203 80
Hugh L. Fox—Furnishing and delivering steam and hydraulic packing....	\$2,657 20
New York Belting and Packing Company—Furnishing and delivering steam and hydraulic packing.....	\$360 90
Louis D. Gregory—Furnishing, delivering and laying 36-inch water main in Southern boulevard.....	\$6,795 00
Louis D. Gregory—Hauling and laying 20-inch water main in Two Hundred and Thirty-third street.....	\$2,193 10

William Horne Company—Furnishing and installing steam piping, Jerome Park and One Hundred and Seventy-ninth Street Pumping Stations..	\$6,007 00
Garlock Packing Company—Furnishing and delivering steam and hydraulic packing.....	\$533 70
Michael D'Ambra—Furnishing, delivering and laying water mains in Kent, Morningside and New avenues.....	\$98,145 85
Michael D'Ambra—Furnishing, delivering and laying water mains in Bailey, Grant, Morris, etc., avenues.....	\$64,936 00
Howard S. Bowns—Furnishing, delivering and storing anthracite coal...	\$76,244 00
Michael D'Ambra—Furnishing, delivering and laying water mains in Classon, Commonwealth, Pratt, etc., avenues.....	\$39,515 00
Leslie McHarg & Co.—Furnishing all the labor and materials to construct an experimental filter station.....	\$7,824 75
Louis D. Gregory—Hauling and laying water mains in Tiebout avenue...	\$1,806 30
George I. Wakeman—Furnishing materials, paving and restoring artificial stone sidewalk.....	\$1,900 00
Louis D. Gregory—Hauling and laying 12-inch water main in Broadway..	\$3,740 75
Walter J. Drummond—Furnishing and delivering double nozzle, New York hydrants.....	\$2,728 00
Ferrara & Tuccillo—Furnishing, delivering and laying water mains in Edgcombe, Fulton, Mohawk, etc., avenues.....	\$28,279 60
High Pressure Fire Service.	
Continental Asphalt Paving Company—Furnishing, delivering and constructing salt water suction mains.....	\$63,682 00
Thos. Cockerill & Son—Furnishing, constructing and erecting High Pressure Fire Service Engine House at Gansevoort and West streets....	\$69,527 00
Thos. Cockerill & Son—Furnishing, constructing and erecting High Pressure Fire Service Engine House, Oliver and South streets.....	\$71,334 00
Frank J. Fee—Furnish, deliver and erect plumbing and gas fitting, at the High Pressure Fire Service Station, Gansevoort and West streets....	\$1,885 00
Frank J. Fee—Furnishing, delivering and erecting plumbing and gas fitting at the High Pressure Fire Service Station, Oliver and South streets.....	\$1,885 00

## BOROUGH OF QUEENS.

M. D'Ambra & Co.—Furnishing, delivering and laying water mains in Van Alst, Harris, Woolsey streets, etc.....	\$92,353 05
M. D'Ambra & Co.—Furnishing, delivering and laying water mains in Bradish, Shaw and Waldo avenues, etc.....	\$8,129 20
A. J. McCollum—Furnishing, delivering and storing anthracite coal.....	\$24,337 60
James P. Graham—Furnishing, delivering and laying water mains in Debevoise, Dittmars and Freeman streets.....	\$73,946 64
Rudolph Reimer—Furnishing, delivering and storing anthracite coal.....	\$4,480 00

## BOROUGH OF RICHMOND.

G. W. DuBois—Furnishing, delivering and storing anthracite coal.....	\$4,375 00
John A. Consalus—Furnishing, delivering and laying water mains in Hillside, Huguenot, Riverside, etc., avenues.....	\$121,971 31

## Water Consumption, Rainfall and Storage.

Tables 1 to 7 give the details of the water consumption in the Boroughs of Manhattan and The Bronx.

Plate No. 1 shows the capacity curve for the old and new aqueducts constructed from the most recent gaugings taken up to date. This curve has been used in obtaining the figures given in the tables.

In connection with the measurements and observations taken in preparation of plans for filtration of the Croton water supply, the new aqueduct was closed on July 6 and partially cleaned. The screens at Gould's Swamp syphon were cleaned of a considerable accumulation of driftwood, and a brick bulkhead about three feet high at Shaft 11-A, which had been left there since the construction of the aqueduct was removed. On several other dates the conduit was closed to carry out the observations and measurements above referred to, to determine the flow and loss of head under different conditions.

Plate No. 2 gives diagrams of water on storage in the reservoirs of the Croton watershed, number of days supply on hand, consumption of Croton water, etc., for the years 1897 to 1906, inclusive, also the estimated population and consumption of Croton water for the years 1907 to 1916, inclusive.

TABLE No. 1.

Average Daily Consumption in Million Gallons, Manhattan and The Bronx, 1906.

Month.	New Aqueduct.	Old Aqueduct.	Gain or Loss in Distributing Reservoirs.	Bronx and Byram.	Total, Manhattan and The Bronx.

December .....	193	207	224	251	262	274	270	295	306	317
Average for year..	197	209	226	249	255	262	268	287	301	305

Total consumption of Croton water for year 1906, 112,000 million gallons.  
No water wasted over Croton Dam during year 1906.

TABLE No. 3.

Estimated Population and Average Daily Supply of Water Required for the Boroughs of Manhattan and The Bronx, From 1907 to 1916, Inclusive.

Year.	Estimated Population.	Estimated Consumption Per Capita in Gallons.	Estimated Average Daily Consumption in Gallons.
1907.....	2,541,000	137	348,000,000
1908.....	2,620,000	139	364,000,000
1909.....	2,703,000	141	381,000,000
1910.....	2,788,000	143	398,000,000
1911.....	2,876,000	145	417,000,000
1912.....	2,967,000	147	436,000,000
1913.....	3,062,000	149	456,000,000
1914.....	3,160,000	151	477,000,000
1915.....	3,262,000	153	499,000,000
1916.....	3,368,000	155	522,000,000

The figures in above table are shown graphically in Diagram Plate No. 2, which gives also the fluctuations in the storage for the past ten years, as well as the ranges of temperature. The estimates of population have been based on the Federal Census of 1900 and the State Census of 1905, as well as the records and estimates of the Health Department figured to July 1 of each year.

The increase in consumption has been estimated to be proportioned to that on population with a yearly addition of two gallons per day to the per capita consumption.

† Over.

Water was wasted over Kensico Dam during the year amounting to 1,437 million gallons.

During the year the west basin of Jerome Park Reservoir was filled from the old aqueduct. Contents at end of year were 731 million gallons.

In order to perform the necessary work in connection with Jerome Park Reservoir and to test the flow, the new aqueduct was shut down on following dates:

June 21, 17 hours; July 5, 24 hours; July 12, 24 hours; July 18, 26 hours; July 28, 29 hours; August 6, 21 hours; September 24, 26 hours; October 1, 24 hours; November 12, 21 hours; November 19, 15 hours.  
The new aqueduct was cleaned on July 6.

## Prevention of Water Waste.

In my annual report for last year, attention was again called to the necessity of adopting measures to prevent waste, and the plan was outlined, detailing the method to be followed for that purpose, which comprised the investigation of mains, including examinations to determine the illegal use of water, if any, house to house inspection and installation of meters.

In February of the present year public notice was given that the Committee on Water Supply, Gas and Electricity of the Board of Aldermen would hold a public hearing on February 21, 1906, in regard to an ordinance which had been introduced increasing the powers of the Commissioner of Water Supply, Gas and Electricity in regard to the installation of meters, and all persons interested in the above matter were invited to attend. The Commissioner of this department was particularly requested to be present, and under his instructions, and in his behalf, the Chief Engineer of this department appeared and stated that this department favored the installation of the meters, provided—

First—That the meters should be furnished and installed at the cost of the City, and not at the expense of the householder, as at present;

Second—That a flat minimum rate should be established, in order to prevent the curtailment of a free use of water in the poor tenement districts, among the people where it is most needed, and to prevent landlords otherwise disposed, to find any reasons for raising their rents;

Third—That the installation should be gradual, so as not only to distribute the expense, but to secure the necessary data for the permanent and advantageous work of the system.

At that hearing this department advocated the adoption of a plan under which several typical districts would be selected in which every house should be metered and observations as to the amount of water consumed would be carefully taken; also house to house inspection and investigation of the illegal use of water, if any, as will be more fully detailed hereafter.

The Merchants' Association of New York, who had given considerable attention to this subject, decided that the adoption of the plan proposed by the Commissioner of the Department, as above outlined, would be advantageous to the City and effectual in securing the desired object. They had, therefore, a bill introduced in the Legislature, which became a law on May 24, 1906, and is known as chapter 611 of the Laws of 1906, and entitled "An act to provide for obtaining information as to the consumption and waste of water in The City of New York." The main provisions of the act are as follows:

The Commissioner, when authorized by the Board of Estimate and Apportionment, shall proceed to designate the districts and areas which he may deem are the best for acquiring complete and reliable information as to the consumption and waste of water, and shall install in those districts, without expense to the consumer, water meters. The Commissioner's agents and inspectors shall be authorized to enter upon any premises where meters are thus installed, and to make such examinations or do such other acts as may be required to accomplish the purpose of the enactment. Suitable readings of the meters shall be taken and carefully recorded, so as to be accessible to the public. Analysis of these records shall be made and reported to the Board of Estimate and Apportionment on or before the 1st day of January, 1907, with the Commissioner's recommendation as to the advisability of metering all water service pipes in the city, and as to the rates which should be charged all classes of consumers of water. The meters thus installed shall be and remain the property of The City of New York, and at all times under the supervision and control of the Commissioner of this Department.

The expense of carrying into effect the provisions and intent of the Act shall be borne and paid by The City of New York, and the necessary funds provided, as prescribed in the act.

On October 16, in accordance with instructions previously received, a full report on the necessary measures to comply with the act above mentioned, was submitted to you by the writer. Nine typical districts in Manhattan and The Bronx and seven similar districts in Brooklyn were specified as those which "will furnish the best opportunities for acquiring complete and reliable information as to the consumption and waste of water," in accordance with the specific terms of the act, these districts embracing:

1. Typical Italian tenements (low service).
2. Good class private houses and medium class apartment houses (tower high service).
3. Medium class apartment houses and private houses (reservoir high service).
4. Typical Hebrew tenements, new buildings (low service).
5. Medium class flat and two-family houses (low service).
6. Of the same character as No. 5, but in high pressure service.
7. Typical Jewish tenements, buildings several years old, remodelled.
8. Two and three-story frame houses.
9. High class apartment houses.

The number of taps reported for Manhattan and The Bronx was about 1,400, and for the Borough of Brooklyn about 1,010, and the cost of furnishing and installing the meters was estimated:

For the Borough of Brooklyn, at .....	\$16,500 00
And for the Boroughs of Manhattan and The Bronx.....	28,000 00
Making a total of.....	\$44,500 00

It was proposed that after the installation of the meters, readings should be taken for a certain time to ascertain existing conditions, after which a rigid house to house inspection would be maintained to insure the proper condition of the fixtures, so that we might be able to determine the difference between the water as then used and the amount required with the fixtures in proper order, and the necessary Inspectors were proposed, to make the requisite examinations. The yearly cost of these Inspectors was estimated,

For Manhattan and The Bronx, at.....	\$6,050 00
—and for Brooklyn, at.....	5,050 00
—making a total of.....	\$11,100 00

It was proposed that an Assistant Engineer, competent and experienced, should have general and entire supervision of the above work, as well as over that of the investigations of the illegal use of water and house to house inspection.

The method of conducting these investigations was fully detailed in that report.

The total cost of the instruments and appurtenances required for this work was estimated as follows:

For Manhattan and The Bronx.....	\$15,000 00
For Brooklyn .....	13,000 00
—making a total of.....	\$28,000 00

The total yearly cost of the salaries required for this work in Manhattan and The Bronx was given as .....

—and for Brooklyn.....	\$14,062 50
—making a total of.....	\$28,125 00

The investigations were to be conducted for not less than six months, at the end of which time the advisability of prolonging them would be passed upon. At the end of this observation the following data would have been secured, i. e.:

First—The amount of water consumed with the fixtures in the condition in which they were found.

Second—The amount of water used with the fixtures in good order and therefore the amount of preventable waste.

Third—The proper meter rate to apply so that the tenants when their fixtures were in good order would not pay more for the metered water than they had been paying before the installation of the meters.

Both the advocates and opponents of the installation of meters would have facts before them to arrive at a practical and intelligent solution of this long vexed question, instead of continuing, as heretofore, what has been little better than a purely academic discussion.

In regard to the house to house inspection, reference was made to the results obtained by this method in Brooklyn in times of emergency, which resulted in a considerable reduction in consumption and particular mention was made of the reports for Brooklyn of 1902 and 1905, dealing with this question. The following extract from this report was inserted:

Inspection was made of the district bounded approximately as follows:

Nostrand avenue, Myrtle avenue, Washington street, East River, Navy Yard and Flushing avenue.

November 19—Fifteen hours.  
The work at the Pocantico gatehouse, commenced during the third quarter, was completed during the last quarter.

## Analytical and Biological Work Performed.

## Mt. Kisco Laboratory.

The force at Mt. Kisco Laboratory now consists of one Bacteriologist, two Laboratory Assistants and two Laborers. Since January 1, 1906, the entire water examinations for Manhattan and The Bronx, except for the distributing systems, have been made at Mt. Kisco Laboratory. Heretofore a large part of this work had been carried on at Mt. Prospect Laboratory, Brooklyn.

## Collection of Samples.

The schedule for the collection of samples of water for analysis has been practically as follows:

Daily samples have been collected from the terminus of the Croton Aqueduct at the One Hundred and Thirty-fifth street gatehouse, and at a tap in City Hall square. These samples have been analyzed physically and bacteriologically. Chemical, microscopical and bacteriological analyses have been made on weekly samples collected from the outlets of the distribution reservoirs in Central Park, at High Bridge and at Jerome Park; from the Williamsbridge reservoir; from the One Hundred and Thirty-fifth street gatehouse, and from a tap in City Hall square. All of the above samples have been sent to Mt. Prospect Laboratory, in Brooklyn. Weekly samples have been collected from all the storage reservoirs on the Croton watershed, from a number of places on the Croton River and its tributaries, and from the reservoirs of the Bronx and Byram systems. These samples have been sent to the branch laboratory at Mt. Kisco, and examined bacteriologically and physically, and on alternate weeks microscopical examinations have been made. Once a month complete analyses have been made upon samples from these reservoirs. Complete analyses have also been made upon weekly samples from several points on Croton Lake, especially at the intake. Samples have been collected from the ground water supplies in the Boroughs of Queens and Richmond as often as once a month or once a quarter (as occasion seemed to require), and given a complete sanitary analysis at Mt. Prospect Laboratory.

## Analytical Work on Water.

The following figures give the amount of work which has been done at Mt. Prospect and Mt. Kisco Laboratories during the year 1906:

## Total Samples of Water Analyzed by Laboratories.

Mt. Prospect Laboratory.....	2,061
Mt. Kisco Laboratory.....	3,542
Total.....	5,603

## Total Samples of Water Analyzed, by Boroughs.

Manhattan.....	4,253
Queens.....	769
The Bronx.....	520
Richmond.....	61
Total.....	5,603

Physical examinations.....	2,908
Complete chemical analyses.....	882
Partial chemical analyses.....	1,379
Microscopical examinations.....	2,095
Bacteriological examinations.....	4,618
Bacteriological tests for bacillus coli.....	4,686

## General Analytical Work.

The following table gives an idea of the general analytical work during the year:

Oil samples examined.....	51
Coal samples examined.....	37
Metals and alloys.....	18
Packing.....	17
Sand.....	9
Cement.....	5
Mineral analyses of water, complete.....	2
Mineral analyses of water, partial.....	41
Special tests and experiments.....	110

## Reports.

During the year 1906, 147 special reports have been made on the quality of the numerous sources of supply, and on oil, coal and the various constructional materials used in the Department for the Boroughs of Manhattan, The Bronx, Queens and Richmond.

Special tests have been made in connection with changes in the sewerage and drainage at Mt. Kisco, and at the Montefiore Home, and studies have been made in relation to the determination of the presence of B. coli in water; of the amount of lime in water; on the removal of algae and intestinal germs from water supplies by the copper sulphate treatment; and on the various methods for the purification of drinking water.

From the Mt. Kisco Laboratory weekly reports have been made on the quality of the water in the distributing system for Manhattan and The Bronx.

## Quality of the Water.

## BOROUGH OF MANHATTAN.

The following table gives a comparison of the average quality of the high service and low service waters supplied to the Borough of Manhattan for the years 1905 and 1906:

	One Hundred and Thirty-fifth Street Gatehouse.		Tap in City Hall Square.	
	1905.	1906.	1905.	1906.

Per Cent. of Positive Tests for B. Coli—				
In 0.1 c. c.....	4.300	2.900	1.400	1.100
In 1 c. c.....	16.000	13.500	5.700	3.500
In 10 c. c.....	32.700	47.500	16.400	26.300

The accompanying diagram (Plate No. 3) shows the daily fluctuations in the quality of the water during the year 1906, and on the accompanying sheets will be found the results of analyses of the various sources of supply for the Borough of Manhattan.

The analyses of the Croton water supply have shown from year to year a gradual deterioration in the quality of the water. The usual high color has been maintained, and the turbidity and microscopic growths have increased in amount. Besides the increase in color, turbidity and microscopic growths, the water has also shown deterioration from a sanitary standpoint. A gradual increase in pollution has been noted in the weekly reports from the Department Laboratory at Mt. Kisco.

These reports give the analyses of each individual reservoir, lake and important stream on the entire watershed, and form an exact gauge as to sanitary conditions.

The following table shows the great increase in microscopic organisms in Croton Lake during the last four years. The figures beginning with September, 1906, are lower than those for the preceding months on account of treatment with copper sulphate of the lower portion of Croton Lake. These samples were taken at the surface of the old dam.

Monthly Averages of Microscopic Organisms in Croton Lake.

Month.	Average Microscopic Organisms.			
	1903.	1904.	1905.	1906.

The table shows that the water supplied to the Bronx Borough is of good quality and practically the same as that delivered during the previous year, except for microscopic growth.

On the accompanying sheet will be found the results of analyses of the reservoirs on the watershed of the Bronx and Byram Rivers.

A considerable increase in typhoid fever occurred in that portion of The Bronx in the neighborhood of One Hundred and Sixty-eighth street and Third avenue. This matter was investigated by our Department and samples of water from the houses in which the cases occurred were examined and found to be above suspicion, showing that the disease was contracted from sources other than the water supply.

## BOROUGH OF QUEENS.

The accompanying sheet gives the average analyses of the various waters supplied to the Borough of Queens during the year 1906.

All of the water delivered to this Borough is from driven wells, except a portion of the Flushing water supply. Owing to the use of the new well system at the Flushing Pumping Station, very little surface water has been used during the year.

The Long Island City Pumping Station No. 2 has been rebuilt, and analyses of weekly samples from this source have been made. The amount of chlorine has so far not risen above fifty parts per million.

A new deep well system has been established by the Citizen's Water Supply Company, at Douglaston, Long Island, from which a water of particularly good quality and of very low mineral content is obtained.

Daily analyses of chlorine have been made during the year of the water from the North Beach Pumping Station, and these results have been reported weekly. The amount of salt contained in this water has averaged rather high, and owing to the very corrosive nature of the minerals which come from infiltration of sea water into these wells, it is recommended that this water be discontinued for use as soon as it can be replaced.

The other sources of supply for this Borough are entirely satisfactory, as will be seen by an examination of the analyses given on the accompanying blank.

## BOROUGH OF RICHMOND.

The average results of the analyses of water from the various sources of supply for the Borough of Richmond during the year 1906 are given in the accompanying table. The figures do not vary materially from those of the preceding year.

The water supplied by the West New Brighton Pumping Station of the Staten Island Water Supply Company is at times of poor quality, due to the fact that in periods of drought a polluted stream in the neighborhood is drawn upon. A comparison of the B. coli results in the analyses of the stream and of the tap samples taken at Port Richmond, which is supplied by the West New Brighton Pumping Station, brings out this fact very clearly. This water is also very high in mineral matter, due to the infiltration of sea water. The other sources of supply, although containing considerable lime and magnesia, are otherwise of very good quality.

## Pollution at Mt. Kisco, Bedford, etc.

It is to be regretted that no progress has been made during the year to abate the sources of pollution, especially at Mt. Kisco, where they constitute a serious danger to our supply.

The maps prepared for the acquisition of land for the disposal works at Mt. Kisco were approved by the Board of Estimate and forwarded to the Law Department so that condemnation proceedings might be instituted, but on June 28 the Law Department advised us that, owing to the legislation enacted during the year, there was no law "under which these proceedings could be lawfully instituted." We are thus debarred, for the present, from taking any further steps to carry on the proposed work.

I have recommended that a bill be introduced in the Legislature to authorize the City to condemn land for sanitary purposes in the watershed, and negotiate with the various villages interested for the construction in common of a system of sewers in the Croton watershed.

At Brewsters we still maintain the Electrozone plant, which treats the sewage from that portion of the village which has sewers, but the analyses of the water of Tonetta Brook show a considerable amount of pollution from house drains and street wash that flow into the river. The low level of the land does not admit of storage, and the large amount of water in the stream would render local filtration difficult, if not impracticable.

At Carmel, Bedford, Lake Mahopac, North Salem and other villages our supply is polluted by house drainage and the wash from stables. On the feeders of Titicus Reservoir some of the sources of pollution are outside of the State, and therefore beyond our control. I have made some recommendation for the lease or acquisition of land to abate these nuisances, but have been so far unable to establish even a pan closet system in these localities.

These facts furnish additional evidence, if it were needed, of the imperative need of filtration, so often recommended before. The great deterioration of the Croton water, both from a physical and a sanitary standpoint, is clearly shown from the results of our laboratory analyses on file in our office, and the main points of which are hereinbefore given. The subject of filtration will hereafter be discussed more fully.

## DISTRIBUTION SYSTEM.

## BOROUGH OF MANHATTAN AND THE BRONX.

Streets and Avenues in Which Water Mains Have Been Laid.

(R) Indicates Mains Relaid or Replacing Others.

## BOROUGH OF MANHATTAN.

## Twenty-inch Pipe.

Ninth avenue, from Two Hundred and First to Two Hundred and Ninth street, Broome street, from Marion street to Bowery; Bowery, from Broome to Delancey street; Delancey street, from Bowery to Cannon street.

 Second avenue, from Sixth to Eighth street.

Two Hundred and Twenty-eighth street, from White Plains road to Fourth avenue.

Two Hundred and Thirty-fourth street, from Catherine street to White Plains road.  
 Two Hundred and Thirty-third street, from White Plains road to Bronx boulevard.

Two Hundred and Thirty-third street, from Kingsbridge road to Jefferson avenue.

## Repairing and Renewal of Pipes, Stopcocks, etc.

In addition to the regular district repair companies three gangs of men have been employed during the year making the necessary repairs and additions to mains, stopcocks and hydrants.

## The amount of work done is as follows:

- 1 triple nozzle Standard New York hydrant reset.
- 38 additional double-nozzle Standard New York hydrants set.
- 9 additional double-nozzle New York case hydrants set.
- 25 double-nozzle Standard New York hydrants set in place of defective ones.
- 4 double-nozzle New York case hydrants removed.
- 19 Nos. 1 and 2 hydrants set in place of defective hydrants.
- 14 Nos. 1 and 2 hydrants repaired.
- 18 Nos. 1 and 2 hydrants reset.
- 12 No. 3 hydrants reset.
- 2 "B" hydrants set in place of defective hydrants.
- 1 "B" hydrant repaired.
- 4 double-nozzle "A" hydrants set in place of defective hydrants.
- 4 double-nozzle "A" hydrants repaired.
- 2 single-nozzle "A" hydrants set in place of defective hydrants.
- 3 single-nozzle "A" hydrants repaired.

1 No. 1 hydrant removed.  
7 single-nozzle "A" hydrants removed.  
1 new 4-inch stopcock and box set.  
38 new 6-inch stopcocks and boxes set.  
3 new 12-inch stopcocks and boxes set.  
3 new 20-inch stopcocks and boxes set.  
136 6-inch stopcocks repaired.  
90 12-inch stopcocks repaired.  
6 20-inch stopcocks repaired.  
2 36-inch stopcocks repaired.  
1 4-inch stopcock and box replaced.  
39 6-inch stopcocks and boxes replaced.  
1 10-inch stopcock and box replaced.  
20 12-inch stopcocks and boxes replaced.  
1 2-inch stopcock and box replaced.  
22 6-inch mains repaired.  
12 12-inch mains repaired.  
8 20-inch mains repaired.  
1 24-inch main repaired.  
1 30-inch main repaired.  
6 36-inch mains repaired.

New horse troughs set by resolution of Board of Aldermen.....	11
Old horse troughs repaired .....	231
Horse troughs removed permanently.....	1
Horse troughs changed to new locations .....	4

Horse troughs to be set by the Society for the Prevention of Cruelty to Animals—resolution of the Board of Aldermen.

The Board of Aldermen have passed fifty-seven resolutions allowing the Society for the Prevention of Cruelty to Animals to set at different localities in the Boroughs of Manhattan and The Bronx, what are known as "Man and Beast" fountains, these fountains to be furnished and kept in proper repair at the expense of this society, but water to be furnished to them free by the City.

On account of the limited fund set aside for repairs to old horse troughs and setting of new ones owned by the City and entirely under the care of this Department, there are forty-two resolutions to set new horse troughs at different localities in the Boroughs of Manhattan and The Bronx, upon which work had to be suspended.

On August 1, 1906, one new company, known as Company No. 3 was added to the repair companies (which now number eight) in the Bureau of the Chief Engineer, outside of what are known as the floating gangs.

## DISTRIBUTION SYSTEM.

## BOROUGH OF MANHATTAN.

## Maps and Records.

The utter lack of accurate records and plans of the distribution system in such form as to make them available, was referred to in previous reports and work started to prepare such maps.

Owing to the lack of sufficient force, the work has not progressed as rapidly as would be desirable, but the maps for the First District, extending from the Battery to Houston street and from the North River to the East River, have been completed on a proper scale and show the location of mains, gates, hydrants, types of the latter, and as far as possible, the date of installation of the mains. The surveys have extended beyond the First District and well into the Second, but the mapping of that work has not yet been completed.

The records of the gates and their locations, with the location of the valves for shutting down the large water mains, has progressed further. The surveys have been completed and mapped and the sheets have been bound in book form of portable size and copies of these books have been furnished to the various pipe yards. The districts completed are as follows:

District No. 1—From the Battery to Houston street and from the East River to the Hudson River;

Districts No. 2 and No. 3—From Houston street to Forty-second street and from the East River to the Hudson River;

District No. 4—From Forty-second street to Ninety-sixth street and from the East River to the Hudson River;

Districts No. 5 and part of No. 7—From Ninety-sixth street to Harlem River Ship Canal and from the Harlem River to the Hudson River.

## Mains.

In all new work, both in Manhattan and in The Bronx, we have excluded 6-inch mains and the specifications for pipes, methods of laying, etc., are in accordance with the plans discussed in the last annual report. The failure to take action on the recommendation for an appropriation to carry out the provisions of the act "to provide for obtaining information as to the consumption and waste of water in The City of New York," which would have enabled us to increase the force and obtain the necessary instruments for the measurement and flow, etc., has prevented us from making the investigations outlined in the last annual report to determine the flow of the large mains so as to avoid undue losses by friction or resistance and properly locate the trunk mains.

We expect next year to be able to begin work on the trunk main on the East Side to which reference was made in the last annual report.

The smaller 12-inch mains to reinforce the distribution system and increase the pressure on the East Side have, however, been laid between Houston and Division

streets and between Third avenue and the East River, and about 360 additional fire hydrants have also been installed in that district. Furthermore, in the district east of Broadway from Frankfort street to the Battery, 12-inch mains have been laid in those streets hitherto supplied only by old 6-inch mains and about 260 new hydrants have been installed.

In The Bronx, about twenty-eight miles have been added to the distribution system and about 570 additional hydrants installed.

Work on the two 48-inch mains from Jerome Park has been completed on the Seventh avenue section, between One Hundred and Fifteenth street and One Hundred and Thirtieth street and on the Jerome avenue section pipes and castings have been made and delivered on the work in preparation for laying as soon as the season opens.

The 48-inch main from Central Park to run down Eighth and Ninth avenues, has been laid down to Sixty-second street and Broadway.

#### Cover Over Rapid Transit Tunnels.

In designing and laying the High Pressure Fire System mains, in locating the 48-inch mains down Eighth and Ninth avenues, and in endeavoring to provide connection from Fifth avenue eastward with the proposed East Side main, say from Chambers to Twentieth and Twenty-first streets, referred to in the last Annual Report, the main difficulty encountered has been the method of crossing the Rapid Transit tunnels owing to insufficient covering.

In the laying of the high pressure mains, this has led, among other unfavorable results, to a succession of dead ends in Broadway and in the mains from Central Park to a more complicated alignment and the manifolding of the mains; while as regards the new main on the East Side, we have yet been unable to determine upon a satisfactory method of crossing and will certainly be compelled to go much higher north than would otherwise be necessary with a corresponding increase in the length and cost of the proposed main.

The necessity of so designing and constructing the Rapid Transit tunnels as to leave sufficient covering over them for our pipes is evident and I would strongly recommend that this matter be brought to the attention of the Rapid Transit Commissioners, so that this difficulty may be avoided in the future.

In this connection it is well to add that the work of laying our pipes is also unnecessarily increased by the numerous gas mains on our streets. There seems to be no reason why these various mains should not be consolidated into a single one and I also recommend that such measures as may be deemed advisable be taken to secure this result. The matter should be taken up with the gas companies as speedily as practicable.

#### Recording Gauges.

Owing to the lack of appropriation, we have been yet unable to have recording gauges installed at the engine houses as recommended in my last Annual Report as well as continuous recording gauges at the various pipe yards.

#### Notice from Fire Department.

In order to co-operate with the Fire Department in the shutting down of gates, an arrangement has been made under which the Fire Department will send a notice of second alarm fires to our yards so that men can be detailed therefrom to operate the gates where necessary.

#### Gates.

Additional gates have been installed, as far as the appropriations granted have allowed, and they are regularly inspected so as to secure their being in good working order.

#### Repair Gangs.

It has not been possible, owing to lack of appropriations, to make the subdivision of districts recommended in my last Annual Report and still less to purchase the necessary buildings for repair yards and headquarters of these repair gangs. The Second District, formerly extending from Houston to Forty-second street, has, however, been divided into two districts, with Fifth avenue as the dividing line; the eastern portion has its headquarters at the Twenty-fourth street pipe yard and the repair yard of the western portion remains as before at West Thirty-seventh street.

On the evening of January 5, 1906, James Pilkington, a contractor (who was tunneling through Fifth avenue, between Thirty-third and Thirty-fifth streets, under permit issued to Marc Eidlitz for the purpose of constructing a sewer to drain the new Altman Building in Fifth avenue, between Thirty-fourth and Thirty-fifth streets), set off a blast which seriously injured one of our large water mains in Fifth avenue at that point. This injury, which seemed at first to be a slight one, developed into a very serious leak, and gangs of men from this Department, being hastily called to the scene, found it necessary to shut off a large main which was fractured.

As we have two 48-inch, two 36-inch, one 20-inch and one 12-inch main in Fifth avenue, there was serious difficulty encountered in determining which one of the mains was broken, and the only way to do this was to shut off each line in succession. When this was done, it was found that the easterly 36-inch main had been broken. Immediate steps were then taken for the purpose of repairing this main, and when it was uncovered, we discovered that the length of pipe just south of the south crosswalk of Thirty-fourth street had been split nearly the entire length. Further investigation showed that the tunnel excavated by Mr. Pilkington, instead of having been constructed upon the lines called for by his permit, had been allowed to swing over to the west, nearly to the centre of Fifth avenue, so that the blast which was set off that afternoon occurred directly under the 36-inch pipe which was broken. A gang of men was placed on the work of repairing this 36-inch main, and the work was continued without ceasing night and day until the main was repaired and the water turned on.

On the afternoon of February 17, 1906, an extraordinary blast was set off by a cellar excavator named Antonio Pucci, in Convent avenue, East Side, in the vicinity of One Hundred and Twenty-eighth street. The blast was so heavy that it threw into Convent avenue large quantities of rock and stone, which broke through the paving and fractured two of our 48-inch water mains at that point. This was particularly unjustifiable inasmuch as letters had been sent to Pucci and to others blasting in the vicinity, warning them of the close proximity of our water mains and of the danger thereto incident to their blasting.

Water was promptly shut down at the One Hundred and Thirty-fifth street gate house by our men stationed in that location for such an emergency, but notwithstanding our promptness a great deal of property in the vicinity was flooded and damaged. Careful investigations were made to find out which of the eight lines had been damaged, by the blasts, and those which were found to be unhurt were immediately again put into service.

Measures were taken at once to repair the damage done, and the employees of the Department and contractors worked day and night to hasten its completion, which was soon effected and the water turned on again in the main.

On the morning of October 31, 1906, at 4.20 a. m., a telephone message was received at the headquarters of Repair Company No. 4, at Sylvan place and One Hundred and Twenty-first street that a serious leak had developed in the water main on Ninety-eighth street, between Amsterdam avenue and Broadway.

The night gang proceeded to this point and promptly started to shut off the valves.

No difficulty was experienced in locating the valves, which were closed down as rapidly as their large size would permit.

Owing to the fact that the 36-inch main on Ninety-eighth street did not have a valve on each side of the single connection to Ninety-eighth street pumping station, it was found necessary to close down the pumps at this station for several days.

The loss of pressure due to the closing down was partially relieved by increasing the amount pumped at One Hundred and Seventy-ninth street and High Bridge pumping stations.

Four repair gangs were at once put on this work, which was prosecuted day and night, until the broken pipe was removed and a new section put in.

Over the broken pipe the fill was about 12 feet deep owing to a regrading of the street some time after the pipe had been laid in the ground. This extra weight may have been the cause of the break, as after the pipe was uncovered a very large stone was found to be resting on the main and it appeared as if the rock had been dumped there in the regrading of the street.

#### BOROUGH OF QUEENS.

##### Supply.

The pumping and boiler plants at station No. 1 are in first-class shape and at this time it is impossible to further develop the water yield, except such as may be gained by the cleaning out of the present well system.

Plans and specifications have been prepared for a fence to properly enclose and protect the pumping station and grounds adjacent thereto.

It is difficult to determine the yield of pumping station No. 2, particularly in view of the imminent danger of an increase of chlorine through the infiltration of salt water. The daily yield may probably be estimated at, say, 400,000 gallons or 500,000 gallons, which hardly pays for running this station, so that it would be abandoned permanently now were it not for the extreme scarcity of water in the First Ward. We will, however, put it in commission after doing no more than absolutely necessary to run the station with safety.

In order to prevent possible accidents and resulting damages, it would be well, and we propose, to fence the large 16-foot open well. Later on it would be advisable to secure an appropriation sufficient to drive test wells to ascertain the possibility of additional supply in the First, Second and Third Wards, and if such an appropriation is granted some of these wells may possibly be driven in the vicinity of station No. 2.

Pumping station No. 3 is in fairly good state of repair and is yielding about the maximum amount of water which is possible to be developed at this location.

The need of a reserve storage for supply in case of shutting down of the pumps in the First Ward and also to secure steadier and better fire protection is severely felt. In order to supply this deficiency I propose therefor the erection of a suitable standpipe of a capacity of, say, about 1,000,000 gallons, and will make the necessary surveys to locate it as soon as practicable.

The average daily yield of the Flushing pumping station, Third Ward, during the past year has been slightly in excess of 1,500,000 gallons. This might have been increased by forcing the pumping, but it has not been found advisable to resort to this extreme measure. The present plant consists of one 3,000,000-gallon engine, which on the test duty trial showed a duty in excess of 110,000,000 foot pounds of work per million British thermal units furnished to the engine, and another of half this capacity, which is held in reserve and which is very seldom called into service.

The water is supplied to the engine from the present pond and from the deep wells by means of air-lift system, the air for which is furnished by a duplex compound air compressor. This method of pumping at this station has proved to be a very uneconomical one. As noted in this report, the station duty for an average pumping of over 1,580,000 gallons per day shows the duty based on the total net head on the pump to be but slightly in excess of 22,000,000 foot pounds of work per 100 pounds of coal used. This shows a falling off in duty of slightly over 9,000,000 foot pounds of work during 1905, when the average yearly duty was slightly in excess of 31,680,000 foot pounds of work per 100 pounds of coal used.

It is evident from this that a plant of this kind, involving the use of air, shows a very early falling off in efficiency and becomes very expensive to operate, and I therefore recommend that provisions be made to pump the present supply in a more economical manner, and that means be provided to determine the amount to which the average daily yield at this station may be increased.

In order to reach the water by direct suction of the pumps at the level at which it is now probably located in the ground, it would be necessary to considerably remodel the plant by lowering the present 3,000,000-gallon pump sufficiently to enable it to get all this water by direct suction and all of the present air-lift wells should then be connected up as ordinary suction wells. The delivery from this station should then be increased by whatever amount it may be shown from test wells that the present yield may be developed. To carry this scheme into effect and to secure better economy, the present No. 1 Snow pump of 1,500,000 gallons capacity should be replaced by a new high duty vertical crank and flywheel engine, with a capacity dependent on the ultimate development at this station. The water ends would be set sufficiently low to maintain the level of the underground water as at present. The present boiler capacity will probably be sufficient to run the new engine. The rearranging of the pumping plant at this station will necessitate the reconstruction or rebuilding of the engine house, and provision will also have to be made for an increased coal storage capacity. The latter is very vital, as, in order to get economical prices for coal, the Department must be able to provide storage for an amount equal to that which will be consumed during the four months constituting the winter period.

The earliest and cheapest addition to the water supply in the Borough of Queens to be obtained is by filtering the waters from Oakland Lake, which in its present condition is objectionable. Probably an additional daily supply of 1,000,000 gallons could thus be secured. Some time ago I made this recommendation, but no action was then taken. Under present conditions I believe it should be no longer delayed.

Several methods of purification of this water are now under consideration, and I will report more fully upon these later.

In addition to using the waters from Oakland Lake, I recommend that the present well system be thoroughly overhauled and the yield from these shallow wells brought up to a maximum; also that sufficient land be procured to the north of Broadway to permit of the driving of additional shallow and deep wells and thereby availing the Department of the water from these other strata.

The present pumping plant is sufficiently equipped with boiler capacity to probably supply all the steam necessary to pump this anticipated ultimate supply, but the present pumping units will be entirely inadequate to do the work, and new pumping engines of the modern high duty type, with water ends arranged to reduce the suction lift to a minimum, will necessarily have to be installed to efficiently and economically pump this water. The installation of these new units will probably necessitate the remodeling of the present engine house and coal bunker.

The above extensions in this Borough may suffice for a few years. Further additions can always be obtained from entirely new sites, condemnation or absorption of private pumping stations or a supply from the Borough of Manhattan.

The Whitestone pumping station has hitherto been used entirely as a reserve station, to be drawn upon only in times of shortage or a breakdown at the other stations, and its average yield last year was less than 200,000 gallons per day. This year we have been compelled to run it regularly, and its average yield has been about 364,000 gallons. It is reported that the original daily yield from this station was about 600,000 gallons, but no authentic records are available to verify these figures. This station, like station No. 2, is a very expensive one to run, owing to its limited yield, and its operation can only be warranted by the extreme scarcity of the water supply in this Borough. If the appropriation for test wells, referred to when discussing station No. 2, is granted some experimental tests may also be made in the vicinity of the station.

At each of the pumping stations in the Borough of Queens, in order to properly check up the amount of coal burned and see that same corresponds with the weight of coal delivered at the station, I recommend that the bunkers be divided into two or more pockets, so as to facilitate the checking and proper handling of the coal.

#### Distribution System.

The general condition of the distribution in this Borough is good, owing to many new lines of large size which have been laid during the year.

The contract of D'Ambra & Tuccillo is practically complete and water is now being received through the mains; the final estimate of the contract with Norton & Dalton has been completed, and the contract with James P. Graham has been commenced on Lawrence street, Third Ward.

During the year the Citizens' Water Company started the operation of their new station at Alley Pond, which has improved the supply in the Town of Newtown, as well as in Long Island City.

#### BOROUGH OF RICHMOND.

All the necessary field work in connection with the proposed introduction of water from the State of New Jersey was done, and the notes plotted.

A large map covering the entire distribution system and including both those of the private companies as well as the mains belonging to The City of New York, was completed and copies of the same were given to the Fire Department.

Examinations and reports have been made on the various applications of the Fire Department for mains and hydrants, and examinations and reports have also been made on the applications by private companies for permission to make extensions to their systems.

Plans and specifications were prepared during the year for forty-nine thousand eight hundred and two (49,802) feet of water mains, ranging in size from eight to sixteen inches in diameter.

One hundred and seven (107) new hydrants and forty-one (41) gate valves have been provided for in connection with the distribution system.

This Department was advised that the Crystal Water Company would be transferred to the City as of July 1, 1906, and that possession would be given on October 1. On this assumption, and in order to be in a position to operate these plants during the remainder of the calendar year, a communication was addressed, on September 17, to you, submitting an estimate of the amounts required to operate and maintain the pumping stations of the Crystal Water Company, i. e., the Bulls Head, Clove road and Grant City stations, respectively. These stations are in such shape that immediate repairs should be made, and in some cases important renewals. Authorization to make these repairs, to the amount of \$8,000, without the necessity of advertising, was also requested. No action has been taken on these recommendations, however, it having been ascertained that the transfer of the Crystal Water Company had been postponed until next year.

#### Contract with Hudson County Water Company.

Under this contract water was to be delivered by the company and the City was obliged to take it, in June of this year, and the contracts for the mains required to distribute this water were awarded early in the year, and time of completion fixed so that no delay would be experienced in securing the new supply, but after the award of this contract, in view of the injunction granted by the Vice-Chancellor of the State of New Jersey restraining the company from delivering water out of the State, it was deemed advisable not to proceed with the work of laying the mains, and the contractors were so notified.

The Vice-Chancellor's injunction was made permanent by decision of the Court of Errors and Appeals, rendered on November 19, 1906, from which an appeal has been taken by the company to the United States Supreme Court at Washington, where the matter now lies. I have informed that the decision of the Court of Errors and Appeals forbidding the company from taking out of the State the surface waters which they proposed to furnish under their contract, makes a statement to the effect that the company could not be restrained from carrying underground waters out of the State, and probably a modification of the contract would be proposed by the company in accordance with this decision.

#### Distribution System.

The information obtainable in connection with the distribution system, belonging to the various private water companies, as well as to the City, has been plotted on one map, which also shows all the gates and hydrants so far as their location is at present known. I have found in several instances, however, that the old maps furnished to us are unreliable, and I am arranging to make a systematic examination of the conditions existing, in order to get an accurate map of the entire water supply system of the Borough.

In connection with the proposed supply of water from New Jersey, and the mains it was contemplated to lay for its distribution, surveys were made of all the principal thoroughfares, and will be ready for the various lines that are proposed for the ensuing year. One contract has been let for new mains in various streets and avenues, and the pipe is now being cast. The contractor is making all the necessary arrangements to begin laying as soon as the pipe arrives on the ground. Another contract for mains is in course of preparation, and should be ready in a very short time. This contract includes proposed mains on the distribution system of the Crystal Water Company, which it is contemplated will have been taken over by the City by the time the contract is ready for printing.

Studies have been made with a view to dividing the Borough into various zones of distribution, in order to avoid the excessive pressures it is now necessary to carry. The Crystal Water Company's stations are now pumping against a pressure of 150 pounds, and it is advisable to reduce this as much as possible. Tentative zones have been chosen, and the practical details are now being examined, so that all the work done from now on will be in accordance with a well defined system.

During the year a large number of reports have been made on complaints of various kinds, as well as special examinations of applications for mains, hydrants, etc., which cannot be tabulated. Since the passage of the budget for the year (1907), in which was allowed an addition to the maintenance force, arrangements have been made for a better organization and an increased efficiency on the lines which have been laid down.

#### MECHANICAL DIVISION.

##### BOROUGH OF MANHATTAN AND THE BRONX.

##### Reports for Quarter Ending December 31, 1906.

##### Ninety-eighth Street Pumping Station.

Pumping Engine No. 1—Minor repairs and renewals were made to the priming, draining and other auxiliary piping on the steam and water ends of this pump; the check valve on the discharge main being thoroughly overhauled. On the water end of this pumping engine the studs in the cylinder head were renewed and a suspension bracket was put in place. The water chamber was drilled and a water column mounted thereon.

The line to the jacket condenser was renewed.

A new cut-off valve for the crank end of the high pressure cylinder of the left hand engine was made, fitted and placed.

Pumping Engine No. 2—Minor repairs were made to the jacket piping and auxiliary piping on this engine. On the water end the studs in the cylinder head were renewed and a suspension bracket was put in place. The water chamber was drilled and the water column mounted thereon.

The gate valves on the suction and discharge lines were overhauled. Repairs were also made to the air compressor.

Pumping Engine No. 3—The extensive repairs on this engine which were begun in January, 1905, were brought to a close early in the year when the engine was started up, the valves were adjusted, the engine balanced and all leaks in the piping and auxiliary connections were corrected. The crossheads were drilled and tapped for oil cups, and all auxiliary apparatus was thoroughly overhauled and put in first-class running order.

The metallic packing installed in this engine during the time of recent repairs leaked considerably after the engine was put under steam. The contractors were notified of this trouble and the packing was refitted and afterwards gave improved service.

Minor repairs were made to the drain from this pump.

An indicator reducing motion with indicating piping complete was put in place.

Discharge piping on pumping engines Nos. 1, 2 and 3 was scraped and painted and the lagging was oiled.

In the basement of the engine room several abandoned pipe lines were removed. Boilers Nos. 1 and 2—Repairs and renewals were made in the feed connections, gauge glass connections and in the blow-off and other appurtenances. Repairs were also made to the boiler shells, damper regulators and main stop valves, and renewals were made of the boiler trimmings.

Boilers Nos. 5, 6, 7 and 8—Repairs were made to the shells, damper regulators, auxiliary piping and trimmings on these boilers.

The outer walls of the settings of the back connections were repaired and the brickwork in the furnaces was renewed. Repairs were also made to the grates and firing tools.

Part of the main steam piping in the boiler room was replaced and new hangers were installed to properly support this line. Repairs were also made upon the steam lines on the horizontal return tubular boilers.

In the coal house scales were repaired; a new bulkhead was built, and the coal house windows were boarded up to increase the storage capacity.

The buildings in general were cleaned up and whitewashed or painted.

#### One Hundred and Seventy-ninth Street Pumping Station.

Pumping Engines—Repairs and renewals were made to the jacket and drain piping, oil cups, air chambers, gauge glasses, etc. In many cases the auxiliary piping was simplified to a great extent, and in the future the amount of pipe and the number of valves and fittings required, for repairs and renewals, will be considerably less. There still remains considerable of this kind of work to be done.

On the No. 2 engine a broken cam of the admission valve of the low pressure steam cylinder was replaced and a new crank was fitted to the low pressure exhaust valve.

Engines Nos. 1, 3 and 4 were provided with new brackets and shafts for the valve gear of the high pressure side of each engine.

In engine No. 4 new studs, springs and valves were placed in the water end, where necessary.

The high pressure connecting rod on engine No. 4 was removed and brasses trued up and relined. New plug valves and springs were fitted in the dash pots.

Engine No. 2, which has undergone extensive repairs, after receiving the necessary adjustments and otherwise being eased up after its long period of idleness, was finally, on March 20, put into regular service, and after correcting one or two minor defects, the engine is now in first class condition and is giving the most reliable service of any engine in this station.

In addition to other small repairs on the steam lines in the engine room, repairs were made on the 4-inch steam line leading to engines Nos. 1 and 3, and two new lengths of 10-inch pipe were introduced to the main steam lines to engines Nos. 1, 2, 3 and 4. The major part of these repairs to the steam lines might have been avoided if the contract for the new steam lines, bids for which were opened on May 23, had been immediately executed and the contractor had expedited the work and completed same in the required time.

For the use of engines Nos. 5 and 6, two small independent air pumps were installed on a separate brick foundation in the basement, to be used for starting the engines and in case of emergency when the attached air pumps, with their driving mechanisms are in need of repair or otherwise giving unsatisfactory service. The ejectors formerly used for starting these engines have become unreliable and the installation of these two small pumps has proven very beneficial.

On engines Nos. 5 and 6, in addition to many minor repairs to auxiliary piping and making of steam joints, etc., it has been found necessary to renew many of the studs, springs and valves in the water ends.

Boilers—General repairs were made to the boiler furnaces, settings, grate bars and shells. In boilers Nos. 1 and 2, rivets in shell and dome were cut out and re-driven and the furnace arch blocks and cheeks were rebuilt.

On boilers Nos. 3 and 4 defective tubes were cut out and new tubes were put in and expanded.

Back wall and bridge walls of No. 3 boiler were rebuilt; the bonnets of the blow-off valves, feed pipe, the water column nipples and the bolts in the boiler fronts were renewed.

On boilers Nos. 5, 6, 7 and 8 the bridge walls and back walls were rebuilt, repairs were made to grates and to the steam lines. Blow-off piping in valves were renewed.

In boilers Nos. 5 and 7 tubes were cut out and replaced.

On boilers Nos. 9, 10 and 11 the bridge walls and back connections were rebuilt and the injectors were connected up.

The automatic damper regulators were repaired and connected to the tower service. The separate return lines which were formerly used for the drains from engines Nos. 5 and 6 were connected to these boilers.

The main steam line leading from boilers Nos. 5, 6, 7 and 8 received considerable overhauling and connections between the steam lines from the various boilers were made more secure.

Considerable repairs were made on the coal conveyor. Many new wheels, buckets, brackets, etc., were put in place and renewals made upon the steam lines leading to the coal conveyor engines.

Early in the year, owing to the impending coal strike in the anthracite coal regions, it was found advisable to store some of the coal in the courts and to the north and to the west of the boiler house.

The work under the contract made on August 29, 1905, with the firm of Snare & Triest, of No. 143 Liberty street, New York, for furnishing materials and building monitors on the engine houses at One Hundred and Seventy-ninth street and at Jerome avenue Pumping Stations, and building grating platforms and stairways in the basement of engine house at One Hundred and Seventy-ninth street, was completed early in the year, final payment on same being made on May 7, last.

Plans have been prepared for and work is under construction for iron and glass office for the use of the engineman in charge of this station.

Bids were opened on May 23, 1906, for a complete high pressure steam line for the engine room in this station. A contract for the same was awarded to William R. Horne, and he was notified to begin work on September 12, 1906. The contractor has made very little progress on this work up to the present time, with the result as before stated, that the City has been obliged to make many costly and expensive emergency repairs to the present main steam lines.

#### High Bridge Pumping Station.

This station was held entirely in reserve until about the middle of the third quarter, when the station was started, running one eight-hour watch per day and then kept on emergency or reserve conditions during the other sixteen hours of the day.

The boilers at this station are in excellent state of repair; the pumping engine No. 1 (Delamater), 5,000,000 gallons daily capacity, which has been shut down for several years and was more or less damaged by frost, has been partially overhauled and preparations are being made to get it ready for regular service.

The Worthington engine No. 2 which was overhauled during the past year, is in pretty fair running order and is now being used in the actual service every day during the eight-hour run.

Extensive renewals and repairs are being made upon the steam heating and drain pipes from same in this station and when same are completed, this station will be habitable and adapted for regular service.

#### Jerome Park Pumping Station.

On pumping engine No. 2 repairs were made to the leak on the high pressure cylinder head and to the bearings of the air pump rocker shaft.

Repairs were also made to the jacket pumps, to the rocker shaft of pumping engine No. 3, and to a leak in the main steam line in the engine room.

Several serious leaks in the steam line in the boiler room have occurred, but they were temporarily repaired by means of clamps, hangers, straps, etc., but the condition of the steam lines becoming aggravated, it was found necessary to purchase new valves and fittings and have new lengths of pipe made in order to insert same in the steam line, and a shut down was made at 11.15 p. m., on November 21, and the requisite repairs were made. During this time the pressure fell from the normal seventy-one pounds to an average thirty pounds, which was due to the pressure from the Williamsbridge reservoir. The shut-down lasted until 1.15 a. m., when the engines were started up again and at 1.45 a. m. the pressure of seventy-one pounds on the distribution system was restored. The success of this shut-down may be appreciated when

it is considered that the pressure in the entire Borough of The Bronx was reduced from its normal of seventy-one pounds per square inch to that of thirty pounds per square inch, due solely to the head received from the Williamsbridge reservoir, and which served to keep the major portion of the distribution system filled in case of fire and only a few scattering points in the high areas were probably without water. The Fire Department was duly notified and other public institutions were advised to make provision for a shut-down which would probably last two or three hours. It may be pertinent to add that the work was carried to a very successful conclusion in the time anticipated and that not a single complaint was received and doubtless no one except those notified was aware that the shut-down had taken place.

The lower water chamber on the right hand side of the No. 2 Worthington pumping engine developed a crack in the flange bolting to the valve deck casting. This crack is about eight inches in length and extends down about six inches below the flange, passing through the bolt hole. The course of the break was checked by drilling and tapping a hole at the end of the crack and inserting a plug therein. The flange was then strengthened by means of a band bolted around its outer edge. Further provision was made against leakage by inserting a patch on the inside of the discharge chamber. This crack occurs in what appears to be the strongest part of this casting and it is difficult to determine the causes which produced same.

Considerable trouble has been experienced with the floor tiling in this station, due apparently to the expansion and contraction caused by variations in the temperature and provision will have to be made to take up this expansion if the floor in this station is to be kept in a proper manner.

The weighing scale at this station is proving very unsatisfactory and cannot be relied upon for use. It will be necessary to provide a new scale at the earliest possible moment, in order to properly weigh the coal now being burned at the station.

#### RECOMMENDATIONS.

##### BOROUGH OF MANHATTAN AND THE BRONX.

During the year just passed, the aim has been to bring the existing pumping plants up to as high a state of repair as possible and to put the same on a safe and reliable running basis. At the same time considerable study has been made of the best plan of procedure to meet the present existing conditions and the conditions which will probably exist between now and at the time when the major part of the high service area will be supplied direct, by water from the Catskill Mountains.

Numerous complaints of lack of pressure on the upper floors (fourth and higher) of the new modern, law tenement houses, which have now reached a height averaging between six and eight stories, and which are at present supplied by the Croton gravity service. These buildings are generally located on areas, the elevations of which are slightly above or below the line of demarcation between the Croton gravity service and the high service, this line being located in a plane sixty (60) feet above mean high water. This line was established by an ordinance passed by the Board of Aldermen of The City of New York on December 3, 1878, and approved by the Mayor on December 7, 1878, and reads as follows:

"Resolved, That the Commissioner of Public Works be and he hereby is authorized, under chapter 477, Laws of 1875, and as amended by chapter 386, Laws of 1878, to erect on the lots situated between Ninety-seventh and Ninety-eighth streets, and one hundred (100) feet west of Ninth avenue, and which lots were retained by the Commissioner of Public Works, under chapter 230, Laws of 1870, a suitable building, and to place therein two (2) pumping engines and fixtures, including a tank and standpipe; and to lay the necessary pipes to connect the same with Croton main leading from reservoir in Central Park, and with the distributing mains now laid, so as to supply water at higher elevations to buildings on that portion of Manhattan Island situated above the level of sixty feet above mean high tide, at a cost not exceeding the sum of two hundred and twenty thousand dollars."

The provision herein made was to supply water at higher elevations to all buildings situated on a level equal to or above sixty feet above mean high tide. This simply defines the high service zone, but does not specify the head of water that is to be maintained on the area of the zone.

As the elevation to which the City is legally bound to deliver water has never been definitely settled, it is questionable how far the Department can go in the matter of delivering water above the curb line.

In view of these facts, as the question is entirely a legal one, it seems to be advisable that an opinion be requested from the Corporation Counsel as to the legal obligations of this Department in the matter of the heights to which water must be furnished in public and private buildings.

The major part of the above mentioned complaints are from buildings in which the present Croton gravity service would easily supply the second and probably the third floors, but would thus necessitate the provision by the owner of ways and means to raise the water to the higher floors.

As each foot of elevation added to the lift of the water adds a fixed and definite amount of cost to the pumpage of same, it seems patent that the expense of the additional pumpage should be borne by the property which is thereby benefited and enhanced in value, and which is relieved of the added and very costly expense of private pumping. It is manifest that a fair and just method of providing water services to the areas in the elevations higher than that now supplied by gravity would be to endeavor, as near as it is practicable, to maintain above the lines of demarcation, a head which as a minimum would be equal to the average head now existing between the hydraulic grade of the Croton gravity supply and the average ground elevations in the areas supplied by that system. Whatever expenses are incurred in pumping water to points above this average height, should be directly charged to the properties benefited.

It is pertinent to add, that if these demands and also the demands due to the consumption caused by increasing population are to be properly met, provisions will have to be made at an early date for increasing the pumping capacity, as the capacity of the present plants will not be sufficient to meet the demands put upon them during the coming ten or twelve years, which is a conservative estimate of the time that will elapse until relief will have been received from the Catskill Mountains.

As stated in earlier reports, if the time of operation was to be extended over a period of approximately the life of a first-class pumping plant, say twenty years, a scheme of consolidation of all the pumping at a point to be located near the centre of gravity of the distribution system of the pumped service would be the most economical plan from a maintenance and operating standpoint. This plan would necessarily involve the construction and installation of a new and modern pumping plant equipped with modern high duty pumping engines, boilers, economizers, coal handling plant, etc., costing in excess of \$1,000,000 and requiring additional expenditures for the laying of many additional miles of large mains necessary to properly distribute the water.

For the limited time that the high service pumping plants will be in existence, where same may be accomplished economically, it will probably be much more advisable to increase the capacity of some of the present pumping plants by replacing the obsolete and uneconomical low duty pumps by pumping engines of the modern high duty type.

The point best adapted for beginning improvements under the existing circumstances, is in the Ninety-eighth street pumping station. This station is at present equipped with three pumping engines of the duplex, horizontal, compound, direct acting type and of the following capacities:

	Gallons.
Pumping engine No. 1.....	7,500,000
Pumping engine No. 2.....	7,500,000
Pumping engine No. 3.....	10,000,000

The lack of efficiency of the type of engine installed in this station is manifest from the published reports which show that the yearly duty is barely in excess of 55,000,000 foot-pounds of work per 100 pounds of coal used, the consumption being about 15 pounds of coal per million gallons of water lifted to a height of one foot.

The amount of coal used annually, in order to produce an average daily pumpage of 16,700,000 gallons, is over 3,600 tons, costing approximately \$19,000.

The installation in this station at an expenditure of not more than \$80,000 of one pumping engine having a capacity equal to or greater than that of the present average daily pumpage of this station, and of a type of engine similar to that now under contract to be constructed and installed in the Ridgewood pumping station, in the Borough of Brooklyn, and which will show either a test duty of not less than 140,000,000 foot-pounds of work per 100 pounds of coal burned, or a yearly duty which should not

fall below 120,000,000 foot-pounds of work per 100 pounds of coal burned, with a consumption of not more than 7 pounds of coal per million gallons of water lifted to a height of one foot, would result in a yearly coal consumption of not more than 1,500 tons of coal, at an annual cost of about \$8,000.

The saving on the coal alone by this engine would be more than \$11,000 per annum.

As both the present pumping engines, Nos. 1 and 2, are of the low duty jet-condenser type, they are, in addition to being uneconomical very wasteful in operation, on account of the great amount of water required to supply the jet condenser as compared with that required to obtain the same end in the modern pumping engines. Approximately one of these engines runs daily throughout the year; the second engine is run at not less than 15 per cent. of the time, and the amount of water used for condensing purposes and run off into the sewer will be not less than 250 gallons per minute or 350,000 gallons per day, which, at the metered rate of 10 cents per 100 cubic feet has a revenue of \$50 per day, or \$17,500 per annum.

Omitting the saving due to a reduction in the cost of handling a greatly reduced amount of coal the net annual saving on fuel and water would be about \$28,500, an amount sufficient to pay off the cost of the installation of the pumping engine and its accessories in a comparatively few years.

By the installation of one unit as before mentioned two of the present pumping engines could be retained as reserve units only, as it would not be safe to rely upon them for regular and continuous service.

By removing pumping engines Nos. 1 and 2, and installing two units as above described, and of as large a capacity as the space in the present engine room will allow, rearranging the present suction and discharge piping and installing new boiler capacity at an expenditure which should not exceed \$250,000, the present daily pumpage may be more than doubled while the annual charge for fuel and labor would practically remain the same; while on the other hand there would be the annual saving resulting from the sale of 350,000 gallons of water ordinarily used for jet condenser purposes and consigned to the sewer.

The installation of this plant will necessitate the making of the building as fireproof as possible, and will require the installation of a new fireproof engine room floor and at least the placing of a new fireproof roof on the present engine house and boiler room.

I therefore recommend that provision be immediately made to double or further increase the present capacity of this station by installing two modern high duty crank and fly wheel engines, with necessary boilers, additional suction and discharge mains, steam piping and other appurtenances complete.

#### One Hundred and Seventy-ninth Street Pumping Station.

In order to immediately improve the conditions at this station, plans are practically in readiness to build a new dock and to provide better facilities for receiving and handling the coal; to build separate discharge line from both the high service and the tower service engines; to strengthen the present discharge lines from said engines; to furnish and install new boilers, economizers and steam lines in the boiler room.

Plans are prepared for adjustable ventilators on the present monitors on the engine room.

#### High Bridge Pumping Station.

The High Bridge Pumping Station has been for many years held entirely in reserve and until the latter part of the last quarter banked fires only were maintained upon the boilers.

To keep the machinery in good running order, it was decided to operate this station daily at least during one eight-hour watch, and during that time practically 2,000,000 gallons have been pumped daily into the high service reservoir.

I therefore recommend that the necessary additional force be provided to put this station at a full running basis and that the station be operated daily through a full period of twenty-four hours.

#### Jerome Park Pumping Station.

This pumping station is the only station which furnishes the high service in the Borough of The Bronx and is at present equipped with two pumping engines of approximately 10,000,000 gallons daily capacity each and has been in regular operation for a period of practically two years.

During the past year the average daily pumpage at this station was over 9,350,000 gallons. It is evident from this that the consumption will shortly increase to such an amount that it will be necessary to keep both engines in active operation, leaving no engine in reserve.

I therefore recommend that provision be immediately made to install an engine of a capacity of about fifteen million gallons per day, to meet the demands which will come upon this station within the next year or two, due to increase in population and the further possible demands that may be put upon it for washing water to be used upon the filtering plant to be installed at Jerome Park Reservoir.

With the installation of this pumping engine will be required the installation of boiler capacity to operate the same. As the Borough of The Bronx is on the high service areas and is not provided with standpipe or reservoir capacity, I recommend that every means be provided to put this station in a position where it will be practically impossible for a breakdown to completely cut the high service areas out of their necessary supply of water. In order to obtain this end I deem it advisable to install in the discharge line from the present pumps, gate valves by which it will be possible to isolate the present standpipe from the system and also provide a second discharge line out of the station.

Plans have been prepared for the installation of adjustable ventilators on the monitors on the engine room at this station. Provisions should be made at this station to construct areaways which would provide natural ventilation in the basement.

At each of the pumping stations in the Boroughs of Manhattan and The Bronx, in order to properly check up the amount of coal burned and see that same corresponds with the weight of coal delivered at the station, I recommend that the bunkers be divided into two or more pockets, so as to facilitate the checking of same.

#### BOROUGH OF QUEENS.

##### First Ward, Pumping Station No. 1.

Ordinary repairs and renewals were made upon both the pumping engines at this station. The cylinders were lagged with a cover of 85 per cent. magnesia; new valve rods were put in place, and necessary changes made in drip, lubricator and indicator connections; and new suction piping was installed under the floor of the condensers.

The boiler feed pump and its piping were thoroughly overhauled.

A new steam line drain was put in and connected up to the drainage pump.

A new valve rod and guide and a new stuffing box were placed on the Blake condenser pump.

The boilers at this station are in first class shape, requiring but little repairing and renewal during the year.

A new cellar door was fitted in place and repairs were made to the engine room floor and to the roof, by the Department employees.

##### First Ward, Pumping Station No. 2.

This station was completely destroyed by an explosion several years ago, and since that time has been abandoned. Owing to the increasing scarcity of water in Long Island City, it was decided to rebuild this station, at least as a temporary pumping plant, at an expenditure approximating \$5,500. Early in the second quarter, the spending of this amount of money was authorized by action of the Board of Aldermen and the work was pushed with diligence and at an expense as shown by the expenditures in detail below:

Contractor and Description of Work.	Amount.
Christopher Clifford, building foundations and setting boiler.....	\$1,100 00
F. W. Vail, erecting frame building.....	1,311 00
H. R. Worthington, pumping engine.....	876 00
H. R. Worthington, air pump and condenser.....	490 00
H. R. Worthington, feed pump and receiver.....	140 00
Sweeney & Gray, smokestack.....	160 00
Robt. Sapp, raising and guying smokestack.....	85 00

#### Contractor and Description of Work.

Contractor and Description of Work.	Amount.
John Welden, carting boiler from Whitestone.....	40 00
Gould & Welden, altering suction tank.....	98 00
Gould & Welden, damper regulator.....	86 00
Jacob Haab, shaking grate bars.....	76 00
Jacob Haab, cleaning eight wells.....	798 00
Jacob Haab, cleaning one 16-inch well.....	250 00
	<u>\$5,510 00</u>

Pending the delivery of check and gate valves for use on the discharge lines of the station, this station is being run temporarily practically every day, pumping out the wells in order to clean same and properly develop their yield, and will be ready to be thrown into regular service within a few days after the receipt of the above valves.

##### First Ward, Pumping Station No. 3.

Minor repairs were made to the pumping stations and auxiliary feed, vacuum and air pumps at this station.

A wooden casing was constructed around the lagging of engine No. 2 and connections were made from steam traps to feedwater heater, etc.

A new cast iron head was placed on one of the wells, and a steam line for the boiler tube cleaner was carried from pumping engine No. 1 to the front of the boiler.

But minor repairs were made to the boilers and their settings and to the building.

##### Third Ward, Flushing Pumping Station.

Except for repairing the crankpin and its box on the high pressure side of the No. 2 engine, which was injured by running hot, but few minor repairs have been made to the main pumps at this station.

Repairs have been made to the steam piping leading to the boilers and the feed pumps.

On boiler No. 1 repairs were made to the Mason governor and a new set of salamander shaking grates and new furnace door liners were installed on the boilers.

The work of installing the toilet system and also the incandescent light system was completed.

The work remaining at the beginning of the year under contract with James A. Stevenson, for building a new boiler house and placing a monitor on the engine house roof, has been completed.

##### Third Ward, Bayside Pumping Station.

After receiving a few ordinary repairs and being thoroughly painted and varnished, both the Blake pumping engine and the Holly pumping engine at this station are in good state of repair.

The Department employees have made necessary repairs to the steam-heating plant and to auxiliary steam piping in the engine house basement.

On the boilers the bridge walls were reset and boiler room doors and jambs were fitted and made tight and the grate bars were repaired and renewed where necessary.

The buildings, including the Engineman's dwelling, at this station are excellently maintained, and after being thoroughly painted and varnished present a very neat appearance.

The closets, toilets, drains, etc., at this station have been thoroughly overhauled and the sanitary conditions in and about the station are first class in every respect.

##### Third Ward, Whitestone Pumping Station.

Moderate repairs have been made to the main pumping engine and to the auxiliary, vacuum, air and boiler feed pumps at this station, as well as to the main steam, blow-off and other auxiliary piping. Repairs and renewals were also made to the receiver on the suction line of the condenser pump and of the damper regulator.

In the main pump a new set of valves and springs were installed.

#### BOROUGH OF RICHMOND.

##### Tottenville Pumping Station.

Minor repairs were made on the main pumps of this station and general repairs were made on the box and piston rods and auxiliary valves of the deep well pumps Nos. 3, 5, 6, 7, 8 and 9, and also new leathers were furnished and placed upon these pumps. Renewals were also made of the set screws and globe valves on these pumps.

A Venturi meter with recording gauge was ordered to be placed upon the discharge line from this station, so that a record of the pumpage from the deep well pumps, which were connected up so as to make direct delivery into the distribution system, might be obtained.

New bridge walls were built in the Babcock & Wilcox boiler at this station.

Safety valves were placed upon boilers Nos. 1 and 2 and parts of the main steam line leading from these boilers to the well pumps were renewed and repaired. Repairs were also made on the injector on the No. 1 boiler and on the feed and cold water lines.

A new 100-horsepower Goubert feedwater heater was furnished and installed.

## HIGH PRESSURE FIRE SERVICE.

Work on the contracts with the Continental Asphalt Paving Company for laying the high pressure mains in the three districts was begun in the Northern District in May, 1906, later in the Middle District and subsequently in the Southern District; the end of the year shows the Northern District almost completed, the Middle District well under way and the Southern District just started.

The work completed to end of year is as follows:

## Northern District.

## Pipe 12 Inches in Diameter.

Seventh avenue, between West Eleventh and West Thirteenth streets.  
Eleventh avenue, between Twenty-first and Twenty-third streets.  
Greenwich avenue, between West Eleventh and West Thirteenth streets.  
University place, between West Eleventh and West Fourteenth streets.  
Waverly place, between West Eleventh and Bank streets.  
Bleecker street, between West Eleventh and Bank streets.  
Washington street, between West Eleventh and Little West Twelfth streets.  
Bank street, between Hudson street and Waverly place.  
Bethune street, between West and Hudson streets.  
Jane street, between West and Hudson streets.  
Gansevoort street, between West and Little West Twelfth streets.  
Little West Twelfth street, between Tenth avenue and Washington street.  
Twelfth street, between Third and Seventh avenues.  
Fourteenth street, between Union Square West and Tenth avenue.  
Fifteenth street, between Union Square West and Tenth avenue.  
Sixteenth street, between Union Square West and Fifth avenue.  
Sixteenth street, between Seventh and Tenth avenues.  
Seventeenth street, between Tenth avenue and Hudson River.  
Seventeenth street, between Broadway and Seventh avenue.  
Eighteenth street, between Broadway and Seventh avenue.  
Nineteenth street, between Tenth avenue and Hudson River.  
Nineteenth street, between Broadway and Fifth avenue.  
Twentieth street, between Broadway and Seventh avenue.  
Twenty-first street, between Broadway and Fifth avenue.  
Twenty-first street, between Tenth and Eleventh avenues.  
Twenty-second street, between Tenth and Eleventh avenues.  
Twenty-second street, between Broadway and Seventh avenue.

Total linear feet of 12-inch pipe laid..... 41,368

## Pipe 16 Inches in Diameter.

Fifth avenue, between Eleventh and Thirteenth streets.  
West street, between Gansevoort and West Eleventh streets.  
Sixteenth street, between Fifth and Seventh avenues.  
Nineteenth street, between Fifth and Seventh avenues.  
Twenty-first street, between Fifth and Seventh avenues.

Total linear feet of 16-inch pipe laid..... 8,433

## Pipe 20 Inches in Diameter.

Seventh avenue, between Thirteenth and Twenty-second streets.  
Thirteenth street, between West Fourth street and Tenth avenue.  
Twenty-third street, between Fifth and Eleventh avenues.  
West Fourth street, between West Eleventh and Thirteenth streets.

Total linear feet of 20-inch pipe laid..... 10,010

## Pipe 24 Inches in Diameter.

Third avenue, between Eleventh and Fourteenth streets.  
Fifth avenue, between Thirteenth and Twenty-third streets.  
Gansevoort Market, between Pumping Station and Little West Twelfth street (2 lines).

Gansevoort street, between Little West Twelfth and Thirteenth streets.  
Little West Twelfth street, between Washington and Gansevoort streets.  
Thirteenth street, between Third avenue and Gansevoort street.

Total linear feet of 24-inch pipe laid..... 11,085

Total linear feet of mains laid in Northern District..... 70,896

Total linear feet of 8-inch hydrant connection laid..... 4,970

Total linear feet of 6-inch blow-off pipe laid..... 240

Total linear feet of pipe, all sizes, laid in Northern District..... 76,106

## Middle District.

## Pipe 12 Inches in Diameter.

Sixth avenue, between Eighth and Ninth streets.  
Greenwich avenue, between Christopher and West Eleventh streets.  
Waverly place, between Christopher street and Broadway.  
Washington place, between University place and Broadway.  
University place, between West Fourth and West Eleventh streets.  
Wooster street, between West Fourth and Bleecker streets.  
Mercer street, between Eighth and Bleecker streets.  
Bleecker street, between Morton street and Broadway.  
Charles street, between Greenwich avenue and West Fourth street.  
Eighth street, between Sixth avenue and Broadway.  
Tenth street, between Third avenue and Greenwich avenue.  
Eleventh street, between Broadway and Waverly place.  
Eleventh street, between Third and Fourth avenues.  
West Third street, between Thompson and Lafayette streets.

Total linear feet of 12-inch pipe laid..... 25,590

## Pipe 16 Inches in Diameter.

Fifth avenue, between Waverly place and West Eleventh street.  
West street, between Spring and West Eleventh streets.  
West Houston street, between Hudson and West streets.  
West Eleventh street, between Hudson and West streets.  
Christopher street, between Sixth avenue and West street.  
Ninth street, between Fourth and Sixth avenues.

Total linear feet of 16-inch pipe laid..... 12,507

## Pipe 20 Inches in Diameter.

West Fourth street, between Sixth avenue and West Eleventh street.

Total linear feet of 20-inch pipe laid..... 1,920

## Pipe 24 Inches in Diameter.

Third avenue, between Tenth and Eleventh streets.

Total linear feet of 24-inch pipe laid..... 400

Total linear feet of mains laid in Middle District..... 40,417

Total linear feet of 8-inch hydrant connection laid..... 1,300

Total linear feet of 6-inch blow-off pipe laid..... 20

Total linear feet of pipe, all sizes, laid in Middle District..... 41,737

## Southern District.

Total linear feet of 16-inch pipe laid..... 50

Total linear feet of all sizes of pipe laid in all three districts..... 117,893

## Gate Valves and Hydrants Set.

	Northern District.	Middle District.	Southern District.	Total, All Districts.
20-inch gate valves set.....	63	8	..	71
16-inch gate valves set.....	22	36	1	59
12-inch gate valves set.....	116	102	..	218
8-inch gate valves set.....	267	89	..	356
6-inch gate valves set.....	11	2	..	13
4-nozzle post hydrants set.....	215	79	..	294

## Cost.

	Northern District.	Middle District.	Southern District.	Total, All Districts.
Contract price .....	\$870,709 75	\$917,330 50	\$1,036,242 50	\$2,824,282 75
Estimate to December 31, 1906.....	703,105 95	381,873 85	58,176 50	1,143,156 30
To complete contract.....	\$167,603 80	\$535,456 65	\$978,066 00	\$1,681,126 45

Total number of tons straight pipe furnished..... 15,937

Total number of tons special castings furnished..... 2,819

Total number of gate valves received..... 1,401

Total number of hydrants delivered (not set)..... 782

Total number of hydrants ready for delivery..... 114

## Pipe Tests.

#### HIGH-PRESSURE PUMPING STATIONS.

##### Machinery.

The electrical equipment of these stations is being built by the Bullock Works of the Allis-Chalmers Company, at Cincinnati, Ohio, and satisfactory progress has been made. One of these motors has been tested by an electrical expert appointed by this Department for the purpose, and found to easily fulfill the requirements of the specifications. As the other nine motors are duplicates of the one tested, it is presumed that the others will also fulfill the specifications. The final test will be made after the equipment is erected in the stations, when each motor and pump will be tested singly and in groups. The pumps are being constructed at the Dixon Works of the Allis-Chalmers Company, in Scranton, Pa., and satisfactory progress is being made on this equipment. It is anticipated that shipments of all materials will commence during the early part of 1907.

##### Piling.

All piling for the motor and pump foundations has been driven.

##### Buildings.

The contracts for the pumping station buildings were awarded on September 11, 1906, to T. Cockerill & Son, for the following sums:

Gansevoort and West Streets Station.....	\$69,527 00
Oliver and South Streets Station.....	71,334 00

The contract for plumbing and gas fitting was awarded on September 17, 1906, to Frank J. Fee, for the following sums:

Gansevoort and West Streets Station.....	\$1,885 00
Oliver and South Streets Station.....	1,885 00

The contractor for the buildings was notified to begin work on October 1, 1906. Work was started on the Gansevoort and West Streets Station on October 1, 1906, and on the Oliver and South Streets Station on October 23, 1906. Fast progress was made on the excavation for both stations, notwithstanding the fact that a great deal of old timber crib work was encountered at the Oliver and South streets site. At Gansevoort and West streets about half of the concrete footing course has been constructed. At Oliver and South streets all of the footing course has been finished and the walls carried up about four feet.

Work on both of these buildings has been delayed on account of the extreme cold weather, during which no concrete work was allowed to be done. The contractor is prepared to resume work as soon as the weather permits and very rapid progress is anticipated.

TEMPORARY PIPE YARD, HIGH PRESSURE FIRE SYSTEM.

## Suction Mains.

The contract for the suction intakes for Gansevoort and West Streets Station and for the Oliver and South Streets Station was awarded on August 21, 1906, to the Continental Asphalt Paving Company, for the sum of \$63,798.

The contractor was notified to begin work on September 10, 1906, and construction was started on October 9, 1906. Very fast progress was made on the suction chamber adjacent to the Gansevoort and West streets Pumping Station.

Owing to the depth at which the suction mains are laid from this suction chamber to the North River, great difficulty has been encountered from the large amount of tide water which has flooded the excavation. Delay has also been caused by the condition of the weather. The contractor for this work has arranged to materially increase his plant and very rapid progress is promised as soon as the weather opens up in the spring, and it is anticipated that this contract will be finished in ample time.

The contractors for furnishing and laying the high-pressure fire mains have made good progress with the work, especially taking into consideration the many novel and difficult features of the same.

Arrangements have been made by them to employ a much larger force next year, so as to secure still more rapid progress and be able to complete the work within their contract time. For that purpose they are accumulating sufficient material, an idea of which can be gathered by the accompanying photograph (Plate No. 4), showing the amount of pipes already stored at their pipe yard at the foot of Twenty-first street and the Hudson River.

The work of furnishing and laying the high-pressure fire mains has sufficiently progressed to make it advisable to utilize these mains as a low pressure system to be connected with the Croton mains, thus increasing the number of hydrants available for fire protection, as well as the available pressure. It is proposed, therefore, early next spring, to make a connection between the Northern District of the high-pressure fire system and the 48-inch Croton water main on Fifth avenue, near Twenty-first street.

## Filtration of the Croton Water Supply.

The need of filtering the Croton supply, both as a sanitary measure and to improve the appearance of the water by removing color, turbidity and the objectionable tastes and odors, has been pointed out for several years in the past by all the engineers who have dealt with this question, and also by the Health Department of our City, and their unanimous recommendations have become more urgent with the advance of sanitary science on one hand and the increasing pollution of the watershed on the other.

The present Chief Engineer of this Department, in his annual report to the Commissioner of City Works of the City of Brooklyn for the year 1896; the engineers employed by the Merchants' Association of New York, in their report on the needs of New York's water supply in 1900; Mr. John R. Freeman, in his report to the Comptroller in the same year, and in 1903 the Commission appointed by the Department of Water Supply, Gas and Electricity, known as the Burr-Hering-Freeman Commission; the Chief Engineer of the Aqueduct Commission in 1904, and the present Commissioner and President of the Department of Health in his able report published last year, have all specifically recommended filtration, urged its immediate need, and pointed out its advantages in their several reports on the subject.

The Burr-Hering-Freeman Commission in their report of 1903 (page 270) state that after a detailed examination of all available sites, they had found only two that were available, i. e., at Goulds Meadow, about two miles southeast of Tarrytown and at Elmsford, about three miles southeast from Tarrytown. In their report they briefly discuss these sites and the cost of the filter beds to be erected thereon; the water from which they assume to be delivered at the height of the Jerome Park reservoir.

The need of filtering the Croton water supply and of proceeding with this work without delay having been thus recognized, the Burr-Hering-Freeman Commission, in their supplementary report of January 16, 1905, to the Mayor, state as follows:

"We approve of the temporary cessation of work on the easterly portion of the Jerome Park reservoir, until the question of filtering the Croton water is settled, because this reservoir will then be used to contain the purified water and require a different design than the one called for."

In the same report they also stated that a reservoir for filtered water should be covered and protected against dust and the sun's light, that such a covered reservoir should be ready on completion of the filtration work and this could be most conveniently and economically provided by a change in the design of the proposed Eastern Basin of the Jerome Park reservoir, the cessation of work on which they had recommended. Lastly, this Commission referred to their investigations of 1903 and to the available sites for filter plants near Tarrytown, which they again recommended, as well as the speedy acquisition of the land, since delay in securing the same might seriously affect the future cost.

In January, 1905, the Aqueduct Commissioners transmitted to the Corporation Counsel the above supplementary report of the Burr-Hering-Freeman Commission, recommending filtration and the suspension of work on the Eastern Division of the Jerome Park reservoir, and also a report of their own Chief Engineer to the same effect, and requested an opinion as to the powers of the Commissioners to construct a filtration plant, and on June 13, 1905, the Corporation Counsel advised the Commissioners that they had "no jurisdiction over any such project as that contemplated."

The Aqueduct Commissioners, on December 21, 1905, adopted a resolution approving the report of their Chief Engineer to suspend work on the Easterly Basin of the Jerome Park reservoir.

On February 26, 1906, the Aqueduct Commissioners, referring to the reports above quoted, addressed a communication to his Honor the Mayor, requesting to be informed as to whether the suspension of work on the Eastern Division of the Jerome Park reservoir should continue indefinitely under the resolution above recited, or whether in the absence of an immediate plan of filtration the Aqueduct Commissioners should direct that the work be resumed on the Eastern Basin and hastened to completion. The Commissioner of this Department, to whom the above communication was referred by the Mayor, strongly reported in favor of filtration recommended by this Department as necessary, and he was then directed by the Mayor to have the requisite plans for the work prepared as soon as practicable. The Aqueduct Commissioners were advised at the same time that no further work should be done by them to complete the Eastern Division of the Jerome Park reservoir, according to the original plans.

In the last part of March, ultimo, the Commissioner of the Department directed me to make the necessary arrangements for the preparation of the requisite plans and specifications to build the filter plants, and in my communication of March 28, after calling the attention of the Commissioner to the sites suggested and discussion of the same by the Burr-Hering-Freeman Commission on page 270 of the report of 1903 already quoted, and in their supplementary report of January 16, 1905, I added:

"I believe, however, that it may be practicable to build the proposed filter beds above the Eastern Division, not yet built, of the Jerome Park reservoir, using the roof of the latter, when covered, as the bed of the filters, in which case, in addition to other advantages, a very large saving in cost (including that of the extensive tract of land otherwise required) would be effected, tedious and expensive condemnation proceedings avoided and the time required for the completion of the work materially shortened. The simplicity of this plan is advised, but before making a more positive statement I need additional data, especially as to the conduit grades, reservoir levels, etc., which I am endeavoring to gather as speedily as possible."

"In order to proceed with this work expeditiously, we need an additional force, especially of expert men trained in this class of work. I beg, therefore, to recommend that an appropriation, say of fifty thousand dollars (\$50,000) be granted for the employment of this force and the other incidental expenses needed to complete the plans, form of contracts and specifications. With an adequate force, and especially if it be found practicable to construct the filter beds at the Jerome Park reservoir, as above mentioned, it is probable that we shall be able to advertise all the main items of this work by the end of the present year."

The Commissioner of this Department addressed a communication to the Board of Estimate endorsing the recommendations of the Chief Engineer, and on May 11, the Board of Estimate and Apportionment adopted the following resolution, i. e.:

"That, pursuant to the provisions of sections 169 and 178 of the Greater New York Charter, the Board of Estimate and Apportionment hereby authorizes the Comptroller to issue Corporate Stock of The City of New York, in the manner provided by section 169 of the said Charter, to the amount of twenty-five thousand dollars (\$25,000)

for the purpose of enabling the Commissioner of Water Supply, Gas and Electricity to employ experts to examine in detail the entire Croton watershed, the reservoirs and the distribution system, with a view to the selection of the best site for the construction of a filter plant, and to prepare plans and specifications for the proper execution of the work."

Steps were immediately taken to secure suitable offices, fixtures, materials, etc., and appoint the necessary force. Messrs. George W. Fuller and Rudolph Hering were appointed as Consulting Engineers. Mr. Fuller's unsurpassed experience and standing as an expert on filtration, and Mr. Hering's familiarity with our water supply and his work as a member of the Burr-Hering-Freeman Commission, rendered their services particularly valuable. Mr. William B. Fuller, well and favorably known as an expert in the design and practical construction of filters, was put in charge of the work, with Mr. F. C. Dunlap and Mr. John A. Vogelsson as first and second assistants. Three draughtsmen from our regular force were also detailed to this work.

An examination was undertaken at once of all previous data relating to the filtration of the Croton water, which included records and plans of the Burr-Hering-Freeman Commission in regard to the Goulds Meadow and Elmsford sites, which they had suggested, supplemented by careful examinations of those two sites and of a third site at Dunwoodie and Tibbets Brook. The records of the Aqueduct Commission in regard to the ground at the Eastern Basin of the Jerome Park reservoir were also examined and this site thoroughly inspected and studied. Careful experiments were made in regard to the carrying capacities of both the old and new aqueducts, with a view to determining the proper elevation and capacities of the filters and solve the question of proper distribution.

Due attention was given to improved methods of washing the sand in place in the filters, instead of scraping off the dirty sand, transporting it out of the filters, washing and bringing it back again, as improvements in this direction promised large economy both in construction and maintenance, and arrangements have been made to experiment with the so-called Brooklyn method, successfully adopted on a small scale in the filter beds at Hempstead and Forest Stream, in the Borough of Brooklyn, and with the Blaisdell washing machine; the tests in both cases to be conducted at the test station to be erected for that purpose. At this station experiments would be made also to determine the most suitable grade of filter sand to be used, head required for filtration, preparatory treatment to be given to the Croton water from the standpoint not only of purity and economy, but also of appearance of the effluent, etc.

Plans and specifications were prepared and contracts for this experimental station let to Leslie McHarg & Co., on September 25, 1906, and it is now complete and ready for operation, as outlined above. The general plan and elevation of this station is given on plate No. 5.

Experiments were made at the mechanical filters at Baisleys, Long Island, in the Borough of Brooklyn, to determine the penetration of alum into the layers of a filter operated at different rates; but owing to the short time available, they were not conclusive and will be continued at the experimental station.

In these experiments we have the co-operation of Mr. D. D. Jackson, Chemist of the Department in charge of our laboratory at Mount Prospect.

In view of recent claims made by the United Water Improvement Company of Philadelphia, of improved efficiency in the production of ozone, as well as regularity of operation under the Vossmer system, which, if substantiated, would make ozone a useful adjunct of filtration, an agreement was entered into with the said United Water Improvement Company of Philadelphia for the installation of a modern ozone plant, under the Vossmer system, in which the merits, reliability and cost of ozone, as well as its advantages as an adjunct in the filtration of the Croton water, could be determined without cost to the City, the expense of the installation of the station, running and operating of the plant being entirely at the charge of the company, but the work to be done under the immediate inspection of the City's representatives.

A similar arrangement has been made with the Blaisdell Filtration Company, of Los Angeles, Cal., to test, without cost to the City, the cost, practicability and advantages of washing sand in place with their machines.

Both the above companies are nearly ready to begin work.

After collecting all the necessary data and completing the examination of the various sites, as well as calculations of cost in each case, it was unanimously decided that the eastern basin of the Jerome Park Reservoir was the "very best site for the construction of a filter plant." This point being determined active steps were taken to "prepare plans and specifications for the proper execution of the work."

Detailed designs, contract drawings and specifications were completed for the bulk of the construction work comprising that part which would not be affected by the results of the experiments to be conducted at the experimental stations, and already referred to. These drawings comprised forty-two covered filters, resting as a two-story structure on the clear water reservoirs below.

On October 3 last a full report was made by me to the Commissioner of the Department, specifically detailing the various recommendations made for several years past for the filtration of the Croton water supply and the work done to comply with the terms of the resolution of the Board of Estimate of May 11, 1906. This report, which was endorsed by the consulting engineers, Messrs. Hering and Fuller, and which, owing to its length, is not inserted here, gave a statement of the existing conditions, mode of supply through the old and new conduits, full discussion of the two sites suggested by the Burr-Hering-Freeman Commission, of another site at Dunwoodie and of the Jerome Park Reservoir site. The main advantages of the latter were shown to be: Better protection against the influx of impure water to mix with the filtered water; increased pressure in the distribution system; more efficient and economical supervision, operation and maintenance; ability to begin work of construction at once without having to wait for the condemnation of land, which would otherwise be necessary, and which could not be begun before securing the repeal of the act passed last year by the Legislature, barring the City from condemning land in Westchester and Putnam counties; and, lastly, a large saving in construction of not less than about \$6,300,000, which might probably amount to \$10,200,000 if the results obtained from the experimental stations established the practicability of some of the features assumed in making the lower estimate of cost.

The cost of covering the Jerome Park Reservoir and building the filter plant there, assuming the practicability of the features above referred to, and which are not to be finally determined until the data from the experimental stations are available, was estimated at seven million six hundred thousand dollars (\$7,600,000), and the cost of covering the reservoir and building the filter plants, should the results from the experimental stations fail to establish the practicability of those features, was estimated at eleven million five hundred thousand dollars (\$11,500,000). In both estimates the sum of three million four hundred thousand dollars (\$3,400,000) is chargeable to the covering of the reservoir, leaving for the filter plants and accessories four million two hundred thousand dollars (\$4,200,000) in one case and eight million one hundred thousand dollars (\$8,100,000) as a maximum in the other. The filter plant was designed with a capacity of 400,000,000 gallons per twenty-four hours.

The report concludes as follows:

"The contract for the filters, plans and specifications for which are practically ready, and which comprises work in regard to which there will be no change, can be completed and advertised and awarded in November, and work thereon finished on or before December 1, 1908. The second contract, which will be either for a settling basin or a filtered water reservoir, according to the results of the experimental stations, will be held back until these results are available and a final decision arrived at in regard to these details. We will be able to complete and advertise it and have work commenced by April 1, 1907, and completed by December 31, 1908. The contract for the sand beds, piping, houses and other appurtenances, also held back for the present for similar reasons, can be completed, advertised and work commenced December 31, 1907, and completed by December 1, 1908."

"The design and contract drawings for the first section of this work, i. e., filters, are now well advanced, and I respectfully recommend that an appropriation of \$4,000,000 be asked to defray the expense of the work under this contract and incidental expenses. If this arrangement be carried out the whole plant may be completed and in operation, according to the most advanced modern standards, on or before December 31, 1908."

In the report to the Board of Estimate and Apportionment, dated November 22, 1906, transmitting the above report from the Chief Engineer of the Department, you discussed at length the need of filtration, recommended its immediate adoption, in accordance with the plans prepared by the Department, and requested the immediate appropriation of four million dollars (\$4,000,000) to carry out the work comprised in the first section as detailed in the report of the Chief Engineer. Action on this resolution is now pending before the Board of Estimate and Apportionment.

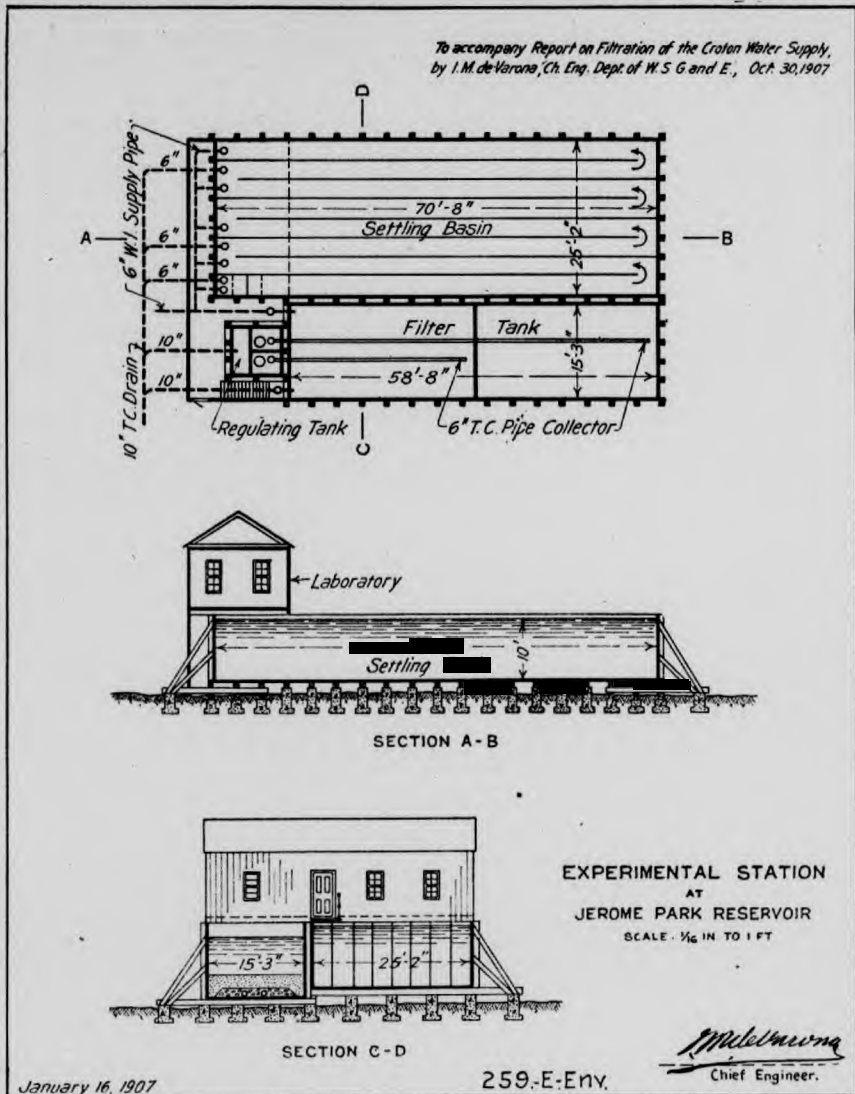

Office Room.

Some improvement has been made in the distribution of the force. On the ninth floor rooms have been secured to accommodate the men employed in the high pressure fire service work and the mechanical and filtration divisions, and the rooms occupied on the sixth floor were given up.

Our force, however, is still divided, part being on the fifteenth floor and part on the ninth, as there was not sufficient room to accommodate all our offices on the latter floor. It is expected that by the beginning of next year additional quarters will be obtained on the ninth floor to accommodate the whole Engineer's Bureau.

Plate No. 5.

BOROUGH OF BROOKLYN.

The writer was in charge of the water supply for the Borough of Brooklyn until July 13, 1906, and the condition of the work connected with the supply at that date will be briefly reviewed.

Sources of Supply.

The Borough of Brooklyn during the last six months of 1905 passed through a shortage in the supply, the reasons for which, fully detailed in the annual report for that year, conclusively show that the responsibility for that shortage did not lie with the Engineering Bureau. It may be added that while at times there was unavoidable discomfort by the reduced pressure, the available supply was so handled that no loss of property resulted even then from inadequate pressure at any fire, as far as the records show, and efficient and rapid work was done to increase the yield of the existing watershed so that the reduction in pressure during the day and early evening hours was entirely discontinued at the beginning of this year.

The measures taken to insure an increase in the supply which would effectively meet the deficiency of 1905, were as follows:

- New wells at the Gravesend station.
- Temporary pumping plant at the New Lots station.
- Utilization of temporary pumping plant at Spring Creek.
- New driven well station on the conduit line at Aqueduct.
- New shallow wells at Jameco and pumping from deep wells at Jameco by the air-lift system.
- New driven well station on the conduit line at St. Albans.
- New driven well station on the conduit line at Rosedale.
- Additional supply from the Queens County Water Company.
- Temporary pumping plant at the Hempstead storage reservoir.
- Six temporary pumping plants along the line of the Massapequa gallery.
- New shallow wells at the Spring Creek, Ozonee, Clear Stream and Forest Stream stations and deep wells at the New Lots station.

In addition to this emergency work, the plans for increasing the supply provided for the rapid completion of the Massapequa infiltration gallery; the construction of the Canarsie pumping station; the construction of an additional pumping station within the Borough limits, located probably at Parkville; the sinking of deep wells along the line of the Massapequa and Wantagh galleries and at various stations on the old watershed between Clear Stream and Spring Creek stations; the remodeling of the New Lots station, and the remodeling of both the North and South Side Ridgewood stations and full development of the watershed by new galleries or wells.

Of the work outlined all the emergency stations were completed early in the year and the supply greatly augmented by these emergency stations, the supply obtained from these works being approximately as follows:

Gravesend station	500,000
*Temporary plant at New Lots	2,000,000
Temporary plant at Spring Creek	500,000
Aqueduct station	4,000,000
Jameco shallow wells	1,750,000
*Jameco deep wells (air-lift system)	4,000,000
St. Albans	2,500,000
Rosedale	2,500,000
Queens County Water Company	2,000,000
Pumping plants along the line of the Massapequa gallery	10,000,000
New wells at Spring Creek, Ozonee, Clear Stream and Forest Stream	4,000,000
<b>Total</b>	<b>33,750,000</b>

\*This estimate based on conditions of July 1, 1906.

The above increase, although large, was obtained at a comparatively small expenditure. The total cost of the works connected with the increase, exclusive of the supply obtained from the Jameco wells and from the Queens County Water Company, being approximately \$100,000.

It was expected that the contract for the deep wells along the lines of the Massapequa and Wantagh galleries and at Clear Stream, Forest Stream, Rosedale, St. Albans, Aqueduct and Spring Creek would be let in time to have the wells sunk before the end of the summer, but a delay in the contract, for which this Bureau was not responsible, made it certain that no addition to the supply could be obtained from these works to tide over a possible drought in the summer. This contract was so drawn that the first well sunk at each station would be tested as a test well, so that if satisfactory material was not encountered there, the City could order the wells driven at another place.

Owing to the difficulty of securing proper coal for our Ridgewood pumping station, on account of the unsettled labor conditions in the mining regions, we were, during June, unable to maintain the level of the Ridgewood Reservoir at its normal elevation, in spite of the large increase in supply already outlined.

With the prospect of a dry, hot summer and consequent increase in consumption and probable reduction in supply, it did not seem advisable to wait until a reduction became imperative through inadequate water supply, and therefore recommendation was made at the end of June to the Board of Aldermen for authorization to spend \$60,000 for the necessary pumps, boilers, suction mains, wells, etc., for five additional temporary pumping plants, to be located at Woodhaven, Shetucket, Morris Park, Lynbrook and Millburn Reservoir, and under authority from the Deputy Commissioner for Brooklyn, orders were issued for the necessary pumps and boilers to actively commence work on the construction of these stations, and this work was in progress when the writer's direction of the work of the Engineering Bureau in Brooklyn terminated.

The unusual and wet weather of July made the immediate establishment of these stations unnecessary, but had the meteorological conditions been different, as was to be reasonably expected from previous records, the delay in the establishment of these stations would have cost, by the consequent reduction in pressure and inconvenience to the citizens, a loss which it is difficult to estimate in dollars and cents, but which undoubtedly would have meant to the property owners and citizens of Brooklyn many times the amount which it was proposed to expend for the new stations. The construction of these new stations has been continued, and the development of the supply by additional wells, other than those already planned and outlined by the writer, has not been carried on, so that the claim advanced in some quarters that it would be more expeditious and economical to increase the supply by sinking additional wells at the existing pumping stations, is not supported by the facts.

The writer has always been in favor of developing to the utmost the supply from existing stations, but the amount obtainable therefrom is necessarily limited on account of the chlorine in the water when it reaches a point at which the quality of the supply would be affected and damage caused to many manufacturing plants in the Borough where public water is used for the boiler supply. It is easy to draw immense quantities of water from the Long Island sands on the south side near tidewater if we could disregard the infiltration of salt water; but the use of water high in chlorine has, among other disadvantages, been proven to be highly detrimental to the life of boilers, pipes, tanks, etc., and at our Ridgewood station, where water high in chlorine was used for a limited time, the boiler tubes and shells were badly pitted in a very short period.

The need of extending the system into Suffolk County and the inadequacy of the present watershed, even when fully developed, to safely supply the Borough beyond the year 1909, has been shown in my previous reports, and an effort was therefore made in the early part of the year to test the constitutionality of the Burr Law by driving wells in Suffolk County just east of the County line and discharging the water into the Brooklyn aqueduct through a flume and pipes extending from the County line to Massapequa.

The establishment of this station did not result, as it was hoped it would, in action being brought by the Suffolk County authorities to restrain the City, and the plant was therefore only operated for a short time.

Conduit Capacity.

The inadequacy of the existing conduit lines has been reported in several of the past annual and quarterly reports, and a contract for the first section, i. e., from Ridgewood to Clear Stream, of a 72-inch steel pipe line, to be laid from the Ridgewood station to the Wantagh or Massapequa station, was prepared, the maps of the necessary lands forwarded and the contract ready for advertising early in the spring. Bids were received as soon as the Corporation Counsel decided that they would be legal and the contractors had actively commenced work prior to the writer's relinquishing the Brooklyn work. It was expected to connect the new stations at Woodhaven, Shetucket and Morris Park and also some of the existing stations to this pipe line and utilize it in this way prior to its extension eastward.

Pumping Stations.

Plans and specifications had been made for the remodeling of the Ridgewood North Side station, including four new pumping engines, new boiler plant and machine shop, and the contracts had already been awarded and the preliminary work well advanced of remodeling the South Side pumping station, including new water tube boilers, new chimneys and a 20,000,000 centrifugal pump, to be utilized during the time that the North Side station was being remodeled.

The contract for remodeling the Morris boilers on the North Side was nearly completed and a contract had been made for a temporary boiler plant on the South Side, to be used while the old boilers were being removed and the water tube boilers installed. The boiler plants were therefore in much better condition than had been the case prior to the completion of this work, and no difficulty should be experienced at this station in obtaining the necessary steam during the time of remodeling.

Studies were far advanced in determining the most economical method to be utilized in developing the shallow and deep underground supply on the south side of Long Island to its utmost, and for obvious economical reasons prior to the commencement of the work of installing the necessary stations, wells, etc., to carry out this plan the only work done on the existing stations was that which was essential to keep them in safe condition, so that while many of these stations did not present a favorable appearance to the eye, they were, nevertheless, in good repair and capable of safely pumping the supply available.

Owing to the lack of the necessary clerical help, the daily records kept at all the pumping stations showing the cost of pumping in all its details, although kept, had not been compiled, and this lack of help had frequently been referred to and attempts made to obtain the requisite force, as the work of keeping careful, detailed cost records at the pumping stations was one that was initiated under the writer's personal direction about thirteen years ago.

A careful study was made several years ago of the methods of keeping an accurate record of the coal delivered at the various pumping stations and paying the contractor on the basis of the coal so delivered. It was found, however, that the cost of this system would be several times greater than the value of the amount of coal that could possibly be lost under the system of purchasing the coal from coal dealers and having it hauled by a separate contractor. This work of hauling and storing the coal was done under careful supervision, and little, if any, coal has been lost since the system has been in vogue, while the cost to the City for the coal has been much less than it would have been had the contractor been compelled to furnish, haul, store and trim the coal and be paid on the basis of the weights certified at the station, as our experience has proven that the large dealers would not bid under these conditions and there would be practically no competition.

Distribution System.

The work of remodeling and extending the distribution system was carried on under several contracts, one of which provided for the removing and relaying of mains on Wythe and other avenues, and another for laying trunk mains through Fort Hamilton avenue, Gravesend avenue, etc., where the increased pressure due to these mains would remedy existing conditions of inadequate pressure. About one-half of the 20 and 30 inch mains on which there had been no hydrants set when the mains were originally laid have had hydrants set, and an additional contract for the remainder of the mains was ready as soon as the money was available.

Past reports have frequently spoken of the necessity of cross-connecting existing mains and laying trunk mains throughout the Borough, and a comprehensive plan of trunk mains was laid out both for the old and new sections of the Borough, and the report of the Committee of Twenty of the National Board of Fire Underwriters, recently made, covering the Boroughs of Brooklyn and Queens, does not recommend any additional water mains other than those proposed by the writer in the Borough of Brooklyn, and I have been informed that this is the only case where additional mains have not been so recommended. The partial carrying out of plans outlined in 1902 and 1903, when the extension of the distribution system first came under the control of the writer, has resulted in a material reduction in the fire insurance rates in sections covering large areas of the important business centres of the Borough, and the completion of these plans would still further materially reduce the fire insurance rates, the plans having, as already stated, received the unqualified approval of the Board of Fire Underwriters.

The care and maintenance of the distribution system did not form a part of the Engineer's Bureau until May, 1905, and since that date many important improvements have been made in the hydrants and valves, and many others recommended, which were not carried out owing to the inadequate force available.

#### High-Pressure Fire Service Stations.

The Coney Island system has shown by its successful operation that it was adequately designed to meet the needs of the service and its completion has resulted in a material reduction in fire insurance rates.

The main system has been well advanced and the work of installing the mains, hydrants and gates should be completed during the year. The contracts for the pumping stations have been prepared and bids received, and, while there have been vexatious delays on this work, due to causes entirely outside of the control of this Bureau, the work should now progress without delay.

#### Brief Summary of Development of Brooklyn Supply Since 1894.

It would seem pertinent to record here the development in the supply of water for the Borough of Brooklyn since this work was placed under a separate Bureau, in 1894, and the writer assigned to take charge of the same, under the Chief Engineer. At that time the distribution system was not included under the Engineer's Bureau, and it was not until 1902 that the extension to the distribution system came under the writer's supervision, while the maintenance and repairs to the distribution system did not form part of his work until 1905.

The average daily supply in 1894 amounted to 71,000,000 gallons, while at the present time it amounts to about 127,000,000 gallons, or an increase in the supply of 56,000,000 gallons, or practically 80 per cent. of the entire supply in 1894. This increase in supply has been obtained by developing the existing watershed and utilizing more fully both the shallow and deep water strata underlying the south shore of Long Island.

The so-called deep strata are mainly found at depths of about 125 to 200 feet below the ground level, although there are deeper strata at various levels below this point. These deep wells were first developed in connection with the Brooklyn supply by Andrews Bros., about a quarter of a century ago, flowing wells then being obtained at the Jameco and Forest Stream plants.

The cost of obtaining this supply has been much greater than the cost of developing the supply nearer the surface, the upper water strata being usually obtained either at the surface or at a depth of 15 to 20 feet below the surface.

The proper and economical development of the Long Island supply is to first exhaust the supply which lies near the surface and then develop the lower levels, the water from which is obtained with greater difficulty and at much greater expense, and, furthermore, as the source of supply for both the upper and lower strata is undoubtedly from the central part of Long Island, and from the same gathering ground, an excessive development of the lower strata would rob the upper strata and result in the City paying an unnecessary amount for the water obtained.

There have been several cases, however, where the deep well strata was more advantageously located than the shallow well strata along the line of our conduit, and deep wells had therefore been driven from time to time at the following stations:

New Lots,	Springfield,
Spring Creek,	Merrick,
Shetucket,	Matowa,
Oconee,	Wantagh,
Jameco,	Massapequa.

The amount obtained from these stations was approximately 16,000,000 gallons daily, while the amount obtained from the development of the upper strata has reached at least four times this amount. Furthermore, the development of the upper strata has resulted in naturally filtering the surface water, which is essentially a spring water which has found its way into the small streams, and by developing the upper strata this water, in many cases, was prevented from entering the streams, and in other cases sinks back into the sand and is drawn from the collecting works as a pure, cold, clear supply perfectly free from any danger of contamination. In 1894 the amount of water obtained from well sources amounted to 22,000,000 gallons daily, while in 1906 the amount obtained of the well and filtered water amounted, at times, to about 80 per cent. of the entire supply or 100,000,000 gallons daily.

The number of pumping stations connected with the City supply in 1894 were as follows:

Mt. Prospect,	Forest Stream,
Ridgewood,	Clear Stream,
Spring Creek,	Watts Pond,
Baiseleys,	Smiths Pond,
Jameco,	Millburn.
Springfield,	

In 1906 the stations connected with the City supply were as follows:

New Utrecht,	Forest Stream,
Gravesend,	Clear Stream,
Mt. Prospect,	Watts Pond,
Ridgewood,	Smiths Pond,
New Lots,	Millburn,
Spring Creek,	Agawam,
Aqueduct,	Merrick,
Oconee,	Matowa,
Baiseleys,	Wantagh infiltration gallery,
Jameco,	Wantagh deep wells,
St. Albans,	Massapequa infiltration gallery,
Springfield,	Massapequa-deep wells,
Rosedale,	Amityville,

and, in addition, plans had been prepared for the Canarsie, Woodhaven, Shetucket, Morris Park, Lynbrook and Rockville Centre stations.

The work done in connection with the increase in the supply, besides covering the construction of these new stations, embraced the remodeling and extension of many of the stations, the laying of the new 48-inch conduit line from Millburn to Ridgewood, and the contracting for the first section of the new 72-inch steel pipe line from Ridgewood to Massapequa.

The remodeling and extension of the distribution system has been carried on in a much shorter period, this work being put under the writer's direction in 1902, and in the latter part of the same year large increases in the fire insurance rates, due to inadequate water supply and pressure, were imposed by the Fire Insurance Exchange over the more important manufacturing and business sections of the Borough. The work of remodeling the system was prosecuted with such energy that these rates have been reduced in the more important sections, resulting, in some cases, in an annual saving to the insured of an amount more than equal to the total cost of the new mains installed. Since December 31, 1901, the following work has been done:

Linear Feet of Pipe Laid.

Year.	48-inch.	36-inch.	30-inch.	24-inch.	20-inch.	16-inch.	12-inch.	8-inch.	6-inch.	Hydrants Set.
1902.....	.....	.....	.....	.....	1,320	.....	5,295	14,353	32,280	143
1903.....	13,905	2,100	102	.....	486	.....	21,685	60,169	40,313	333
1904.....	27,818	1,310	12,119	20,769	81,792	16,421	19,330	62,518	55,041	930
1905.....	.....	.....	1,080	1,160	35,457	7,758	43,549	88,610	34,800	1,149
Total.....	41,723	3,410	13,301	21,929	119,055	24,179	89,859	225,660	162,434	2,555
Total laid prior to 1902.....	139,480	60,184	62,759	.....	255,691	80,820	330,758	698,376	1,890,514	9,272

It will be seen by this table that in a short space of four years the linear feet of 48-inch main laid had increased about 30 per cent., of the 36-inch about 5 per cent., the 30-inch about 20 per cent., the 24-inch about 100 per cent., the 20-inch about 46 per cent., the 16-inch about 30 per cent., and the 12-inch about 27 per cent., while of the 6-inch mains many miles of the old tuberculated mains of this size had been removed. The total amount expended in remodeling and extending the distribution system has, during the four years referred to, equalled approximately 40 per cent. of the total cost of the distribution system for the 44 years preceding (since the works were established).

Utilizing the unused space in the old gate house of the Mt. Prospect reservoir, a laboratory has been installed for the thorough and systematic analyses of our water, in accordance with the most approved modern methods, which, both in point of equipment and as regards the character of the work, is the best established one for that purpose in this country, according to the testimony of the many experts who have visited it. The equipment of the laboratory has been increased and its work now extends to the analyses and tests of oils, coal, metal, paint, cement, etc., for all the Boroughs, making therefore a valuable adjunct in the management of the work of this Department.

In addition to this work on the distribution system, the high pressure fire service system at Coney Island had been installed and the main system was well advanced, all the essential contracts either being let or being ready for advertising.

The above brief outline cannot obviously include and show the numerous improvements made in the detail work of maintenance and operation, but gives some idea, although necessarily restricted, of the extraordinary development of the Brooklyn supply, accomplished often under exceptional difficulties in addition to those inseparable to the construction and management of public systems of water works. The increased efficiency and extension of all parts of the system is the most satisfactory tribute to the efficiency and zeal of the Engineering Bureau during this period.

Respectfully submitted.

I. M. DE VARONA, Chief Engineer.

#### II.

#### OFFICE OF DEPUTY COMMISSIONER.

Department of Water Supply, Gas and Electricity,  
Office of Deputy Commissioner,  
Municipal Building, Room 28,  
Brooklyn, April 1, 1907.

Hon. JOHN H. O'BRIEN, Commissioner of Water Supply, Gas and Electricity:

Dear Sir—I beg to transmit herewith the annual reports presented to me by the heads of the following Bureaus, showing the transactions of the Department in this Borough during the year ending December 31, 1906:

Bureau of Chief Engineer—J. W. McKay, Acting Chief Engineer.

Bureau of Water Rates—William R. McGuire, Water Registrar.

Bureau of Electricity and Gas—H. S. Wynkoop, Electrical Engineer.

Office of Supplies and Accounts—J. J. Flannery, Bookkeeper.

The average daily consumption of water from the Brooklyn system during the year 1906 was 127,068,614 gallons, an average consumption per capita of 93.6 gallons per day. The maximum daily consumption, occurring on September 10, was 143,097,000 gallons.

At the commencement of the year the supply was barely sufficient to meet the needs of the Borough; but with the new work then under way, the improvements of existing well plants, the starting up of one new station, the careful management of the supply and distribution systems, aided by a fairly good rainfall, we were enabled to get and maintain the height of water in the distribution reservoirs normal and higher than it has been for some years past.

The increase in supply from underground sources was approximately 38,000,000 gallons per day. This does not, however, represent a net increase, as the yield of the surface streams and ponds has been diminished by the development of the underground supply and reduced from about 19,000,000 gallons per day to about 8,000,000 gallons per day.

The diversion of the water from the surface to the underlying sands and gravels results in a natural filtration which is not only absolutely safe, but will provide the Borough with clear, cold water of the very highest quality.

Much work has been done in the extension of new mains and the substitution of larger mains for small and old ones throughout various sections of the Borough. This work has borne fruit in a reduction of twenty per cent. in the fire insurance rate in what was known as District No. 1 and in the Kent avenue district.

The high pressure fire service system at Coney Island has given satisfactory service during the year. The contracts have been awarded and work is progressing on the two high pressure fire stations at Furman and Joralemon streets and at Willoughby and St. Edwards streets.

Contracts have been awarded for the construction and equipment of a new pumping station within the Borough limits, to be located at Avenue D and Remsen avenue and known as the Canarsie Pumping Station.

Much work has been done on the new 72-inch steel pipe line, about 24,000 feet having been laid and all of the connecting 48-inch pipe, since the contractors began work, on June 19.

In order to test, if possible, the Burr act, a pumping station was installed at the beginning of the year on the section of land lying within the boundaries of Suffolk County, at the easterly end of the strip purchased by the City for the Massapequa Gallery.

This station was opened on March 14 and operated until May 29, when it was shut down; it was operated again, however, from September 19 to October 27, when it

was finally shut down and dismantled, no action having been taken by the Suffolk County authorities in the matter.

#### Bureau of Water Rates.

The collections for water rents of the year 1906—with the addition of water charges for previous years, collected by the Department of Arrears—amounted to \$3,190,227.35, an increase over 1905 of \$252,677.48.

The total number of water meters in use in the Borough on December 31, 1906, was 8,896, an increase of 1,724 over the number in service at the close of the year 1905.

In February, 1905, twenty-two Inspectors from this Borough were detailed for duty in the Borough of Manhattan, and fifteen of them are still working there. The salaries of these Inspectors, amounting to \$15,427, have been paid from the appropriation for the Borough of Brooklyn. The loss of their services has seriously handicapped the Bureau of Water Rates, as it has been impossible, with the force of Inspectors available, to properly inspect the Borough for new buildings and alterations.

#### Bureau of Electricity and Gas.

This Bureau is charged with the duty of inspecting all electrical appliances or wiring introduced into buildings in this Borough; with the reinspection of old electric equipments and the investigation of all fires which appear to have been caused by electricity. The electrical features used on the stages of our various theatres receive special inspection every week.

During the year 1906 the total number of applications for permits and certificates was 29,898, an increase of 44 per cent. over 1905. The percentage of increase in sub-way permits is largely in excess of that for pole and overhead permits, viz.: 83 per cent., as against 47 per cent.

It has been found impracticable to secure results of any importance in the removal of poles and wires from the streets, owing to the fact that fire and police telegraph lines are constructed and maintained by their respective departments.

The total number of electrical inspections made during the year was 37,057; total number of complaints, 1,885, 9 per cent. less than last year.

#### Bureau of Lamps and Lighting.

So far as the Lighting Bureau is concerned, considerable progress was made during the year 1906 in the matter of street lighting, and the plans which have been prepared under the direction of Mr. C. F. Lacombe, Chief Engineer of Light and Power, for the year 1907 contemplate many important improvements. During the past year 5,700 open flame gas lamps were discarded and Welsbach burners substituted. These new lights are scattered all over the older portions of the Borough, and to-day all of the principal streets are well lighted. We have also lighted Kings Highway from end to end with arc lamps. Negotiations are pending with the Kings County Lighting Company, which will enable the department to discard nearly 6,000 old-fashioned open flame lamps in the Bay Ridge, Borough Park, Bensonhurst and Bath Beach sections and substitute mantle lamps. In addition to this, it is the intention of the Department to issue a great many lighting orders for that section and to greatly improve the lighting on Bushwick avenue and Broadway. So far as the appropriations for street lighting will permit, we shall make an effort to keep pace with the growth of the borough in the matter of street lighting.

The detailed report of this Bureau for the Borough of Brooklyn will be submitted to you in connection with the report of Mr. Lacombe for the City as a whole, covering the five Boroughs.

Yours truly,

WM. C. COZIER,

Deputy Commissioner, Borough of Brooklyn.

#### REPORT OF CHIEF ENGINEER.

Department of Water Supply, Gas and Electricity,  
Chief Engineer's Office—Room 25, Municipal Building,  
Brooklyn, January 15, 1907.

Hon. WILLIAM C. COZIER, Deputy Commissioner of Water Supply, Gas and Electricity:

Dear Sir—The following report shows the condition of the water supply in the Borough of Brooklyn, and the work done in connection with the same for the year ending December 31, 1906; and also the receipts (classifying only those for metered and unmetered water), and the expenditures provided for under the Water Revenue Budget prepared by this Bureau, as well as those items of the Tax Levy Budget chargeable to engineering work:

Receipts.	1905.	1906.
Regular water rates.....	\$1,698,479 26	\$1,829,088 76
Metered water rates.....	905,086 63	982,650 04
Default, arrears, etc.....	338,101 23	378,167 23
Total receipts .....	\$2,941,667 12	\$3,189,906 03
Revenue refunds .....	2,408 70	2,026 66
Net receipts .....	\$2,939,258 42	\$3,187,879 37

	1905.	1906.
Expenditures, Water Revenue Budget.		
Maintenance of Supply—		
Chief Engineer:		
Salaries .....	\$502,350 33	\$620,549 33
Supplies .....	292,619 78	402,379 03

## Water Consumption, U. S. Gallons—All Supplies.

	1905.	1906.
Average daily consumption.....	119,234,968	127,068,614
Maximum daily consumption, winter months.....	138,144,292 (Feb. 14)	137,322,000 (Dec. 7)
Maximum daily consumption, summer months.....	131,933,916 (July 14)	142,445,000 (June 29)
Maximum average daily consumption for one month.....	129,515,942 (February)	134,311,233 (June)
Maximum daily consumption for year.....	138,144,292 (Feb. 14)	143,097,000 (Sept. 10)
Population dependent upon the systems.....	1,312,900	1,358,000
Average consumption per head per day.....	90.8	93.6

In the above table, and in the statements hereinafter to be made on the condition of the supply, the item of "consumption" includes not only the actual amount of water used by consumers, but also waste and any errors of measurement.

## Storage.

Reservoir.	January 1, 1906.		January 1, 1907.	
	Depth in Feet.	Contents, United States Gallons.	Depth in Feet.	Contents, United States Gallons.

Total storage.....	.....	317,457,000	.....	543,418,000

\* New Lots Reservoir was emptied and abandoned on February 4.

## Rainfall, in Inches.

Year.	Brooklyn.	Hempstead.
1900.....	43.11	41.43
1901.....	47.98	49.92
1902.....	48.47	51.98
1903.....	52.49	52.14
1904.....	44.41	48.62
1905.....	42.42	36.82
1906.....	44.79	44.12

While the total rainfall recorded at Brooklyn and at Hempstead was practically the same for the year, there was quite a wide variation in the monthly distribution, the rainfall in general during the spring months being greater in the Borough, while for June and July it was much greater on the watershed, the rainfall for these two months on the watershed amounting to 9.86 inches, and within the Borough limits amounting to 5.84 inches. The large rainfall on the watershed during these months was of great aid in maintaining the necessary supply, and the proportion of rainfall lost by evaporation was much less than would have been the case had light rainfalls been experienced. During August and September the rainfall was light, and the effect of this light rainfall was shown in the reduction in the amount of water stored in the distribution reservoirs and the Hempstead reservoir. This amount was a maximum on August 6, 1906, and decreased on account of the light rainfall, the reduction continuing during September and up to October 20, when the heavy rainfalls greatly increased the supply.

For several years past any estimate made of rainfall based on the experience of former years would have indicated a rainfall below the average, but the actual rainfall has been above the average, with the exception of the years 1900 and 1905, the rainfall in 1900 being only slightly below the average, while in 1905 it was considerably below the average at Hempstead and nearly equal to the average in Brooklyn. The abnormally long period of rainfall in excess of the average would indicate that there would be a corresponding period of drought, and it is therefore probable that within the next three to five years the supply to be obtained from the watershed will be available under drought conditions, and it is not reasonable to expect a supply equal to that which has been obtained in past years.

## General Condition of the Supply.

At the commencement of the year the supply was barely sufficient to meet the needs of the Borough, but the new work then being carried out to increase the supply had advanced sufficiently to warrant the resumption of full pressure in the distribution system throughout the day, even though the Hempstead Storage Reservoir was practically empty, and the total contents of the distribution reservoirs and the Hempstead Storage Reservoir was only 317,000,000 gallons, as compared with about 1,200,000,000 gallons with all the reservoirs full.

As the new stations were completed the amount in storage steadily increased, so that by the beginning of May the amount stored had reached over 900,000,000 gallons. During the latter part of May and the early part of June, however, the weather was dry and hot, increasing materially the consumption and reducing the available supply.

And to further add to the difficulties of maintaining the requisite amount of water in our distribution reservoirs, the coal supplied to the Department at this time was not of the kind suitable for the boilers at the Ridgewood station, and the pumping was necessarily reduced to a point below that sufficient to supply the amount of water necessary to meet the consumption. This difficulty with coal was due to the unsettled labor conditions in the coal regions, and for a while it was impracticable to obtain anthracite coal of the size used at the Ridgewood station. Therefore, while the amount of water held in the Hempstead Reservoir increased from 588,000,000 gallons on May 1 to 646,000,000 gallons on June 30, the amount held in the distributing reservoirs dropped from 314,000,000 gallons to 237,000,000.

The meteorological conditions in previous years made it probable that a dry, hot summer would be experienced, and had such been the case the supply would not have been equal to the demand, nor would the conduit capacity have been sufficient to carry the requisite amount of water to the City, under the conditions of distribution of the supply as then existing.

A request was made to the Board of Aldermen to authorize an expenditure of \$60,000 for pumps, boilers, wells, etc., for new temporary driven well stations, it being intended to construct these stations and put them in operation before the end of the summer. Orders were therefore given for boilers and pumps to partially equip five stations, it being expected that the stations would be located approximately as follows:

Woodhaven station, between Spring Creek and Aqueduct.  
Shetucket station, on the site of the old deep well station, which had been abandoned on account of the chlorine found in the deep well water.  
Morris Park station, located between Oconee and Baiseleys stations.  
Lynbrook station, located just west of Lynbrook, Long Island.  
Rockville Centre station, located south of the Millburn Reservoir.

The three proposed stations between Spring Creek and Jameco were located with a view of utilizing the water along the shed where the conduit was not pushed to its full carrying capacity. The Lynbrook and Rockville Centre stations were located with a view to pumping the greater part of the water obtained directly into the 48-inch force mains leading from Millburn to Ridgewood station, and in this way increase to a maximum the carrying capacity of the conduit and pipe lines.

Owing to improvements to the existing driven well plants, the starting up of one new station, a fairly good rainfall, accompanied by cool, damp weather, and the careful management of the supply and distribution systems, we were enabled to get and maintain the height of water in the distribution reservoirs normal and higher than it has been for some years past.

The inadequacy of the supply, however, in dry weather was very clearly shown by the rapid falling off in the stored water during September and a part of October. The reduction in stored water from September 1 to and including October 20 amounted to 305,000,000 gallons, and this was during a period when the average consumption was not extremely high. The average rate of reduction in the stored water during this period was 6,000,000 gallons daily, and had this rate continued for an additional fifty days the entire available storage would have been exhausted.

The increase in supply made during the year 1906 from underground sources was approximately as follows:

	Gallons.
New Lots station.....	2,000,000
Aqueduct station.....	4,000,000
Jameco deep wells.....	6,000,000
St. Albans station.....	2,500,000
Rosedale station.....	2,500,000
Wantagh gallery.....	4,000,000
Massapequa gallery, main station.....	10,000,000
Massapequa gallery, Seaford station.....	4,000,000
Amityville station.....	1,000,000
Massapequa emergency station.....	2,000,000
Total.....	38,000,000

While this represents the total increase in the ground water supply, it cannot be taken to be a net increase in the supply, as the yield of the surface streams or ponds has been diminished by the development of the underground supply.

At Baiseleys the yield of the filter plant during the month of December of this year, as compared with the month of December of last year, is reduced by 1,500,000 gallons per day. The Springfield Filter Plant has practically been abandoned, as there was only sufficient water in the Springfield Pond to run this plant for twenty-one days since July, 1906.

The gravity supply from the new watershed has been materially reduced by the underground development, the minimum supply this year being about 8,000,000 gallons per day, as compared with the supply of last year, when the minimum supply per day was about 19,000,000 gallons, this supply being obtained under a much lower rate of rainfall.

The reduction in the surface supply caused by the development of the underground supply was to be expected in a watershed composed mainly of sand and gravel without any impervious surface layer. It is fortunate that the water will be diverted from the surface to the underlying sands and gravels by means of subsurface development, as it is therefore possible to naturally filter practically all the surface supply at a much lower cost than would be possible by any means of artificial filtration. The natural filtration also is absolutely safe, and it is not dependent upon human agency or device for its efficiency. It is therefore clear that the development of the Long Island supply should include provision for ponds or reservoirs located between the well or gallery systems and tide water on the more important streams, and in this way hold the surface flow for a sufficient period to allow it to sink into the sands and then pass to the underground collecting works. By following out this system of development the existing ponds and streams need not be interfered with, and the City will derive the water and at the same time do no harm to the adjoining property by drying up ponds and streams.

The large percentage of water utilized this year for the supply is shown by the slight amount of waste from the various ponds on our watershed. The following table gives a summary of the waste from all ponds:

Month.	Waste From Old Watershed.	Waste From New Watershed.	Total.
January .....	63,267,200	2,758,000	66,025,200
February .....	24,063,200	.....	24,063,200
March .....	126,585,500	14,645,600	141,231,100
April .....	347,700,000	100,776,000	448,476,000
May .....	153,255,400	5,748,000	159,003,400
June .....	9,774,000	.....	9,774,000
July .....	100,427,800	26,033,000	126,460,800
August .....	.....	273,990,000	273,990,000
September .....	.....	88,388,000	88,388,000
October .....	5,699,700	17,506,100	23,205,800
November .....	557,300	.....	557,300
December .....	3,364,100	.....	3,364,100
Total.....	834,694,200	529,844,700	1,364,538,900

A large portion of the waste on the new watershed was caused by the shutting off of the East Meadow Pond from July 29 to September 15, on account of the discovery of a number of cases of typhoid fever on the Kossel farm located on the Jerusalem turnpike, adjacent to the East Meadow stream.

The development of the deep well supply was provided for by the contract with Mr. Silas W. Titus, for pumping the water from below the clay bed at the Jameco Pumping Station by means of an air lift, and by a contract for approximately eighty wells located at various points along the watershed between Spring Creek and Massapequa. The contract with Mr. Titus has increased the supply at Jameco from 1,800,000 to about 7,000,000 gallons daily, but in order to obtain the supply it has been necessary to lower the water level in the strata below the clay bed about twenty-two feet, and thus induce a flow towards Jameco of the water which otherwise could be obtained at other points. By the City's sinking a new set of wells at Jameco a greater part of the supply which is now being obtained through the air lift system could be obtained by direct suction, and the remainder could be procured by deep wells located along the conduit line east and west of Jameco swamp.

Considerable difficulty has been experienced in obtaining satisfactory material for the deep wells which have already been driven under contract at the Clear Stream, Forest Stream and Rosedale Pumping Stations; and an experimental well, driven by the City's men at the Forest Stream Station showed an excellent sand and gravel strata somewhat over three hundred feet below the surface. The great depth of this strata, however, would make it expensive to develop the supply, and an effort will be made to obtain satisfactory wells with a strainer located at a lesser depth below the surface. The urgent need of an additional supply will require the development of the existing watershed in such a way as to give a maximum yield, and it is proposed to adopt the system that will utilize both the flow above and that below the clay bed or beds.

In January a new 12-inch connection was laid from the 48-inch Mount Prospect force main on Atlantic avenue through Vermont street to Highland boulevard, thus providing a supply of water at sufficient pressure to give a flow on all floors of houses located along Highland boulevard, near Highland Park. The supply for this section had previously been obtained from the New Lots reservoir, and the pressure was not sufficient as a rule to deliver water above the basement floor. After the new connection was made the pressure on the hydrant at the highest point of the system was about twenty pounds. This new connection made it possible to do away with the New Lots reservoir, which was emptied on February 4, and has not been filled since that time. It is expected that the Park Department will take over the land occupied by the reservoir and make it a part of the Highland Park system. The New Lots Station now pumps directly into the distribution system, and a large number of dead ends were eliminated by the abandonment of the reservoir and the change in the system.

## Conduit Capacity.

The need of additional conduit capacity for Brooklyn has been felt for several years, and has previously been stated, the location of three proposed temporary plants on the watershed between Jameco and Spring Creek was due to the fact that there was additional conduit capacity on this section of the watershed rather than to the watershed being particularly favorable for additional development. It is now a physical impossibility to transport sufficient water through our present conduits to meet the demands of the consumers during periods of dry weather with high temperature, or during periods of very low temperature. In June, when there was danger of an inadequate supply, it was not due to lack of water, but was due to lack of sufficient conduit capacity and inability to keep up sufficient steam at Ridgewood to operate the requisite number of engines to deliver the required amount of water to the distributing reservoirs.

The maps for acquiring the necessary right-of-way for the new steel pipe line were approved by the Board of Estimate and Apportionment on March 9, 1906, and the Commissioners were appointed on June 5, 1906, taking their oath of office on June 18, when the title was vested in the City. The work of taking testimony and determining on the awards to be made is in progress.

The contract for the portion of the steel pipe line extending from Pitkin avenue to Clear Stream, including the 48-inch cast iron pipe between Pitkin avenue and the Ridgewood station, was advertised, and bids were received on May 23, 1906. The contract was awarded to the lowest bidder, the T. A. Gillespie Company, the total amount of their bid being \$1,143,105. Some delay was experienced in having the buildings along the line of the work sold and removed, and it was not until the latter part of August that this difficulty was overcome. Rapid progress has been made by the contractors, and the pipe line is now completed nearly to Jameco, but owing to the delay in authorizing the construction of the emergency stations, there is no supply available for utilizing this conduit. A 20-inch branch line has been run from the conduit to the New Lots station, so that this station could be utilized in case of emergency, to help out the Ridgewood station.

The carrying capacity of this steel pipe line will be slightly over 50,000,000 gallons per day. It is proposed to extend this pipe line from its present terminus at Clear

Stream to Massapequa. Even under the most favorable circumstances, this line cannot be completed to Massapequa before its need will be seriously felt.

#### Quality of the Supply.

The reduction in the amount of surface water and the increase in the subsurface supply has improved the quality of the water furnished, and there has been little or no criticism, except as to the disagreeable odor and taste experienced for a few days on account of diatom growths in the distributing reservoirs. It was necessary, on account of these growths, to shut off the Mount Prospect supply on April 6, and to cut out Ridgewood Basin No. 3 on August 5, and Basin No. 2, on August 4, Basin No. 1 being practically free from any excessive growths. By treating these supplies with copper sulphate the growths were destroyed, but there will always be more or less trouble until our distributing reservoirs are covered. By covering these reservoirs and developing the underground supply, we will be able to furnish the citizens of Brooklyn a supply that will always be clear and cold and palatable and that cannot be excelled by any other supply in existence.

New mains laid in the Thirtieth and Thirty-first Wards reduced the complaint which is usually caused by the stirring up of sediment in the pipes in the Bay Ridge, Dyker Heights and Fort Hamilton sections, due to the change in the direction of the flow of water of these mains in the early spring and late fall months.

#### Additions and Improvements in the Supply.

While no additional requests have been made for appropriations during the past year, the work of improving and adding to the supply has been carried out under the appropriations requested in 1905, but which were not approved until 1906. The works now under contract and those for which contracts have been prepared and are ready to advertise, will utilize all the money available, and it is therefore necessary to obtain an additional appropriation before the works which are needed to properly maintain and develop the system, are contracted for.

The work done during the year which has resulted in an increase in the supply has been as follows:

Work Done.	Increase in Supply. Gallons.
Temporary plant at New Lots station.....	2,000,000
Construction of Aqueduct station.....	4,000,000
Improvement of Oconee station.....	500,000
Development of Jameco deep wells by air lift system.....	6,000,000
Construction of St. Albans station.....	2,500,000
Construction of Rosedale station.....	2,500,000
Improvement of Forest Stream station.....	500,000
Improvement of Clear Stream station.....	500,000
Completion of Wantagh gallery.....	4,000,000
Construction of Massapequa gallery (main station).....	10,000,000
Construction of west end of Massapequa gallery (Seaford station).....	4,000,000
Amityville station.....	1,000,000
Emergency station on line of Massapequa gallery.....	2,000,000
Total.....	39,500,000

While the above figures represent an increase in the supply from subsurface sources, there has been a decrease in the supply from surface sources, due to the development of the underground supply, this reduction representing approximately thirty per cent. of the total increase from the underground supply.

In addition to the works which have directly increased the supply, there should be included the work of driving deep wells at Aqueduct, St. Albans, Rosedale, Spring Creek, Forest Stream and Clear Stream pumping stations, and between Wantagh and Massapequa.

The contractors have driven twelve wells at Forest Stream station; ten wells at Clear Stream station; two wells at Rosedale station; but these wells have not been connected up, and therefore have not increased the supply.

The completion of the new filter beds at Hempstead Pond which filtered the supply from Horse Brook, have enabled the Department to utilize practically all the flow of this stream, whereas formerly only a portion of the flow could be utilized except in dry weather. Contracts have been let for the new Canarsie station, located within the Borough limits, and the work of the remodeling of the Gravesend station has been practically completed as far as the pumping station is concerned; but the delay in constructing the boilers, due to the failure of the contractors, has made it impossible to complete the work of remodeling at this point.

The work of installing the new 20-million centrifugal pump in the Ridgewood South Side station, in place of the old Worthington engine, known as "No. 49," and the installation of four water tube boilers, in place of the Bigelow boilers, and the construction of two new chimneys on the foundation of the existing chimneys, has been prosecuted vigorously since the summer months. A contract for four new engines to be installed in the North Side station at Ridgewood has been let, and bids for remodeling this station will probably be received in the near future, the bids received on November 7, 1906, having been rejected. It is also expected that bids will be received in the immediate future for the boilers, which will complete the work to be done in remodeling the North Side station.

The driven well gangs have been working on repairing and replacing wells, together with driving new wells, and for a portion of the year worked on a 12-hour shift to increase the supply as rapidly as possible.

After having made a careful investigation of the present conditions of the water supply system of this Borough, I have prepared the following list of works to be carried out, together with their estimated cost:

#### Summary.

Item No.	Title.	Estimated Amount.
1.	72-inch steel conduit, from Clear Stream to Massapequa.....	\$2,000,000 00
2.	Land for additional pipe conduits, and works, etc.....	1,500,000 00
3.	Infiltration galleries, or other system of collecting the water from Spring Creek to Bellmore.....	1,000,000 00
4.	Deep wells.....	500,000 00
5.	Driven well stations within the Borough limits.....	440,000 00
6.	New high pressure pumping station for the Wantagh infiltration gallery.....	300,000 00
7.	New high pressure pumping station for the Massapequa infiltration gallery.....	300,000 00
8.	Emergency stations.....	160,000 00
9.	Land for protection from pollution.....	500,000 00
10.	Fencing City property.....	35,000 00
11.	Repairing Millburn reservoir, and providing bases for columns to enable us to cover it at some future time.....	750,000 00
12.	Covering Mt. Prospect reservoir.....	75,000 00
13.	Office for Resident Engineer on conduit line.....	20,000 00
14.	Four houses for Keepers.....	80,000 00
15.	Extension to distribution (small mains).....	400,000 00
16.	New trunk mains for Eighth, Thirtieth, Thirty-first and Thirty-second Wards.....	400,000 00

Item No.	Title.	Estimated Amount.
17.	New trunk mains for Seventh, Twenty-third, Twenty-fifth and Twenty-sixth Wards.....	650,000 00
18.	Removing and relaying mains.....	750,000 00
19.	Replacing hydrants, placing new hydrants, cutting in gates and making cross connections in the older section of the distribution system, and cleaning mains.....	500,000 00
20.	Additional supply mains for Clinton avenue and Brooklyn Heights districts.....	150,000 00
21.	Land for two new pipe yards.....	50,000 00
22.	Buildings and machinery for pipe and repair yards.....	100,000 00
23.	Extension of high pressure fire service system for river front, etc., between Navy Yard and Greenpoint.....	1,100,000 00
24.	Extension of high pressure fire service mains for Gowanus Canal district.....	425,000 00
25.	New high pressure fire service stations for Greenpoint and Williamsburg districts.....	525,000 00
26.	Extending the new machine shop at Ridgewood, North Side pumping station, providing new tools and a new residence for the Engineer in charge.....	60,000 00
27.	Coal shed and coal handling machinery, etc., at the Millburn pumping station.....	100,000 00
Total.....		\$12,870,000 00

While the above amount seems large, it will be necessary to expend still more in the near future, the works given covering all the immediate expenditures required, and not covering all the expenditures that will be necessary in the next two or three years.

Unless the development of the water supply system keeps pace with the growth of population of the Borough, it will mean a serious setback to the prosperity of the Borough, and the effect of an inadequate supply or of slow extension of the distribution system will be felt for many years.

#### Water Surveys.

With the increase in the consumption and decrease in the supply in the late spring and early summer months came the necessity of taking measures to curtail the consumption. Last year a house-to-house inspection was carried on for about two weeks, covering a little over six thousand buildings, and the leakage from defective fixtures in these buildings was estimated at 366,000 per day. In July a second attempt was made to carry out a waste inspection, and we were able, through the courtesy of Mr. Wm. R. McGuire, Water Registrar, to place from sixteen to twenty inspectors on the work, which was commenced early in July and continued for about four weeks.

The district inspected was bounded by State street, Hoyt street, Gowanus Canal and the East River, and covered an area of 1.4 square miles, within which area were located about 8,500 premises. The following schedule gives a summary of the results obtained:

Leaks found.....	4,100
Total leakage per day, gallons.....	815,000
Average leakage per defective tap per day, gallons.....	200

Work of inspection begun July 2, 1906.

Work of inspection completed July 31, 1906.

Number of Inspectors employed.....	16
Time consumed, working days.....	25
Average number of premises inspected per day per man.....	21

The average leakage in the premises inspected was slightly less than 100 gallons per day, and were this average to be found throughout the City, it would mean an unnecessary waste of water of about 13,000,000 gallons per day.

I have previously recommended that at least twenty inspectors be appointed for this work, and that it be carried on systematically, as the results to be obtained, especially under the present condition of an inadequate water supply, would more than warrant the requisite expenditure.

#### Distribution System.

##### General Condition.

The investigation of the distribution system showed that the system was deficient in having many miles of small mains which were so badly tuberculated that they could deliver not more than a small fraction of the water which could be carried by new, clean mains of the same size.

In addition to this difficulty, many of the hydrants connected with the system are antiquated, and in the older sections of the Borough, long distances between hydrants make it very difficult for the Fire Department to quickly get a stream of water on a fire and to obtain efficient streams after the hose lines are run out, especially where there is more than one alarm sent in. The gates on the large and small mains have not been operated with sufficient frequency to maintain them in a satisfactory condition, and the hydrants are not subjected to any regular inspection. Under these conditions, I would recommend that the following work be done:

First—That the work of replacing mains laid prior to 1860 be continued in the future at even more rapid rate than in the past few years, and that the old mains be cleaned on residential streets, where such mains would be of sufficient capacity after cleaning to meet the domestic and fire service needs of the section.

Second—That the work of cutting in new hydrants and replacing antiquated hydrants be carried out as rapidly as possible, as this work will mean a great increase in the fire-fighting efficiency of the system at a comparatively small cost.

Third—That all mains that are not cross-connected be cross-connected, and gates so placed as to reduce the area from which the water will be cut off in case of repairs.

Fourth—Establishing without delay adequate inspection and repair gangs for the gates and hydrants, so that systematic testing and repairing of all gates and hydrants will be carried out.

The list of works required, as already given, shows that a large amount of work will have to be done to bring the system up to the proper standard and to provide for the growth of the Borough by extending the water mains and by laying new trunk mains to carry the necessary water to meet the increased consumption.

#### Fire Insurance Investigation.

The report made by the Committee of Twenty of the National Board of Fire Underwriters on the condition of the water supply in this Borough, carried with it many recommendations that had been made by the Department with a few additional recommendations which had not been covered in the Department reports. The system of mains outlined by the Department met with the full approval of the Committee's engineers, and no additional mains were recommended.

An effort will be made to carry out any recommendations of the fire insurance interests that will tend toward a reduction in the comparatively high insurance rates now paid by the citizens of this Borough.

The work already done by the Department bore fruit in a reduction of 20 per cent. in the rates in what was known as "District No. 1," and this reduction was extended this year so as to cover what is called the "Kent avenue District," extending along the East River from Hewes street to Calyer street; and this fall the reduction in rates was still further extended to cover the territory bounded by the East River, North Thirteenth street, Bedford avenue, Flushing avenue and Heyward street. The reduction in rate was, however, only 10 per cent., while the increase charged, due to inadequate supply, was 20 per cent. The Department is now working on plans which, when carried out, promise to result in a general reduction of 20 per cent. in the rates in the Williamsburg and Greenpoint sections.

## Pressures.

The pressure maintained in the system has been in the main satisfactory, with the exception of the night hours, when the pressure was reduced so as to curtail unnecessary waste during the late hours of the night and the early morning hours. Where a complaint was made of inadequate pressure in the sections adjoining the Mount Prospect reservoir and tower services, extensions have been made to these services so as to cover the district in which the complaint was made.

The laying of the 12-inch main on Vermont street, which was connected to the 48-inch Mount Prospect main on Atlantic avenue, made it possible to place the Highland Boulevard section on this service, and do away with the New Lots reservoir. This change greatly increased the pressure on the high section adjoining Highland Park, and made it possible to open many of the gates on the New Lots system.

The laying of the 30-inch and 24-inch mains on Fort Hamilton avenue, together with the 20-inch main laid on Seventy-ninth street and Tenth avenue, gave a much-needed relief to the section through which this main was laid, and when the water was turned on, on November 1, the increase in pressure was during the morning hours, approximately fifteen pounds. The laying of this main will also prevent to a great extent the stirring up of the sediment in the pipes in the Bay Ridge and Fort Hamilton and Dyker Heights sections, which has previously occurred in spring and fall, when the change in consumption in the Coney Island, Bensonhurst and Bath Beach sections has necessitated a change in the direction of flow in the mains.

## Maintenance of Distribution.

The system established last year of having an Assistant Engineer on duty every night within telephone call, and of having fully equipped night gangs in all the repair yards, has been continued throughout the year. The fire alarm details at the Western District and at the East New York yards have also been continued with marked success.

The work of maintenance of and repairs to the Distribution System has been carried on zealously, extensive and efficient work being done by the men at all the repair yards repairing hydrants, gates, leaks in mains and service pipes, etc. As an instance of the extent and importance of the work done by the repair yards, it may be mentioned that during the year, 169 additional new hydrants were set, 267 new and 922 good hydrants set in place of useless ones, 6,816 hydrants repaired and 5,068 pumped and thawed out.

## Extension to Distribution.

The work of extending the water mains has been continued both under the general form of contract for hauling and laying water mains and by the Department men.

During the year the number of streets for which petitions were received to lay water mains was 232, of which 218 were reported on favorably, recommending the laying of 1,073 linear feet of 20-inch pipe, 260 linear feet of 16-inch pipe, 16,917 linear feet of 12-inch pipe, 152,350 linear feet of 8-inch pipe and 1,645 linear feet of 6-inch pipe.

The work done by the Department men was as follows:

Size of Main.	Linear Feet Laid.	No. of Gates Set.	No. of Gates Removed.	No. of Hydrants Set.	No. of Hydrants Removed.
36-inch .....	.....	2	2	....	....
30-inch .....	.....	1	..	....	....
20-inch .....	.....	3	2	....	....
16-inch .....	.....	1	..	....	....
12-inch .....	330	8	2	....	....
10-inch .....	.....	1	..	....	....
8-inch .....	23,707	40	14	....	....
6-inch .....	2,050	134	42	....	....
4-inch .....	.....	5	..	....	....
Total .....	26,087	195	62	1,348	1,181

The work done under contract was as follows:

Contract for hauling and laying water mains, Isaac Harris, contractor, dated September 25, 1905:

Size of Main.	Linear Feet Laid.	Gates Set.	Hydrants Set.
20-inch .....	3,549	8	....
16-inch .....	2,610	7	....
12-inch .....	19,282	51	....
8-inch .....	53,636	160	....
6-inch .....	10,831	316	....
Total .....	89,908	542	345

## Removal of Old Mains.

Work on the contract for laying new mains and removing existing water mains in Graham street, and in the section bounded by North Thirteenth street, Wythe avenue, Flushing avenue and Kent avenue, was begun on April 23, and completed on October 15. This work has already resulted in causing a reduction in the insurance rates in that section.

The total work done was as follows:

Contract for laying water mains and removing existing water mains in Wythe and Franklin avenues, etc. Thos. O'C. Sloane, contractor, dated October 11, 1905:

Size of Main.	Linear Feet Laid.	Linear Feet Removed.	Number of Gates Set.	Number of Gates Removed.	Number of Hydrants Set.	Number of Hydrants Removed.
20-inch .....	30	30	1	....	....	....
12-inch .....	14,076	5	57	....	....	....
8-inch .....	11,566	98	108	....	....	....
6-inch .....	1,381	25,087	169	42	....	....
Total .....	27,053	25,220	335	42	169	36

A contract has been prepared for relaying mains in various streets where the condition of the old mains is particularly bad. Bids for this work will probably be received early in the coming year and work started at the beginning of the summer.

There are other sections of the Borough, especially the Greenpoint and Williamsburg districts, where the old mains, laid prior to 1860 and badly tuberculated, should be

replaced by new and larger mains. An appropriation for this purpose has been asked and a contract and plans for the work are in course of preparation.

## Summary of Other Work Done.

Other work done in laying mains is shown in the following tables:

Contract of laying mains in Fort Hamilton, Gravesend, First, Eighth avenues, etc. Isaac Harris, contractor, dated May 22, 1906:

Size of Main.	Linear Feet Laid.	Gates Set.	Hydrants Set.
30-inch .....	4,052	5	....
24-inch .....	4,043	5	....
20-inch .....	7,243	11	....
16-inch .....	1,060	2	....
12-inch .....	204	4	....
8-inch .....	2,466	38	....
6-inch .....	810	101	....
Total .....	19,878	166	82

Contract for new 30-inch delivery main from new Gravesend Pumping Station, James P. Graham, contractor, dated November 6, 1905:

Size of Main.	Linear Feet Laid.	Gates Set.	Hydrants Set.
30-inch .....	1,806	6	....
20-inch .....	6	1	....
16-inch .....	95	..	....
12-inch .....	35	1	....
6-inch .....	10	1	....
Total .....	1,952	9	1

Contract for new 24-inch delivery main from New Lots Pumping Station. Isaac Harris, contractor, dated March 26, 1906:

Size of Main.	Linear Feet Laid.	Gates Set.	Hydrants Set.
24-inch .....	2,118	6	....
16-inch .....	256	3	....
12-inch .....	40	1	....
8-inch .....	129	5	....
6-inch .....	68	7	....
Total .....	2,611	22	7

Contract for laying 20-inch main from the 72-inch Steel Pipe line to the New Lots Pumping Station. James P. Graham, contractor, dated August 25, 1906:

Size of Main.	Linear Feet Laid.	Gates Set.	Hydrants Set.
20-inch .....	3,058	7	....
16-inch .....	86	2	....
8-inch .....	57	3	....
6-inch .....	93	10	....
Total .....	3,296	22	10

Contract for 24-inch delivery main from the new Canarsie Pumping Station. Hammond & Sloane, Inc., contractors, dated September 11, 1906:

Size of Main.	Linear Feet Laid.	Gates Set.	Hydrants Set.
24-inch .....	4,137	5	....
16-inch .....	10	..	....
12-inch .....	6	..	....
8-inch .....	6	..	....
6-inch .....	122	15	....
Total .....	4,281	20	15

Contract for tapping 20-inch and 30-inch mains and hauling and setting hydrants. Thomas O'C. Sloane, contractor, dated December 22, 1905:

Size of Main.	Linear Feet Laid.	Gates Set.	Hydrants Set.
6-inch .....	2,691	378	378

Table No. 13, attached hereto, shows the total number of mains laid this year, together with the mains laid previously. Table No. 15 shows the streets and limits in which mains were laid during the year.

## High Pressure Fire Service System.

## Mains.

The work of laying the high pressure fire service mains was resumed by the contractor, John J. Cashman, on March 28, 1906. The total amount of work done during the year was as follows:

Size of Main.	Linear Feet Laid.	Gates Set.	Hydrants Set.
20-inch .....	19,258	55	....
16-inch .....	23,975	76	....
12-inch .....	36,737	92	....
8-inch .....	3,462	510	....
Total .....	83,432	733	465

The work to be done under this contract is now practically completed, except the laying of a few intersections and the setting of about 225 hydrants. It is expected that the work will be entirely completed by May 1, 1907.

By means of connections to the distribution mains at Hamilton avenue and Van Brunt street, and at Adams and Johnson streets, the high pressure service mains have been practically all filled with water from the distribution system, thus placing about 400 hydrants in commission for the use of the Fire Department for fire purposes, pending the completion of the high pressure fire service pumping stations.

Table No. 14 shows the high pressure fire service mains laid to December 31, 1906, and table No. 16 gives the streets and limits in which high pressure mains were laid during 1906.

## Pumping Stations.

Bids were received on August 15 for the work of construction of the main and reserve high pressure fire service stations. Mr. Charles H. Peckworth was the lowest bidder for both stations, his bid for the main station being \$64,422 and for the reserve station \$45,423. The contracts were awarded to Mr. Peckworth, and he was ordered to begin work on both stations on November 5. Work was started on the reserve station at Willoughby and St. Edwards streets on November 10, and all of the concrete walls below grade are now in place and the contractor has commenced the brickwork. At the main station, on Furman and Joralemon streets, work was commenced on November 10. The greater part of the excavation has been completed at this station and some of the concrete for the footings has been put in place.

## Motors and Pumps.

Bids for the motors and pumps were received on July 19, 1905, the D'Olier Engineering Company being the lowest bidders for the work at both stations. Owing to litigation, however, the contracts were not awarded to them until April 25, 1906. The contractors were ordered to begin work on the equipment for both stations on May 21, 1906. The contractors have submitted plans of multi-stage centrifugal pumps, arrangement of oil switches, bus bars, switchboards, etc., as well as of the arrangement of piping and trenches, all of which have been approved. Work at the shops has progressed satisfactorily, two of the motors being almost finished, and work is being pushed on the pumps. The completion of the work on these contracts will depend in a large measure upon the progress of the pumping station buildings.

## Salt Water Suction Mains.

Contract and specifications and plans for the salt water suction mains for the main station at Furman and Joralemon streets are being prepared and will be forwarded for printing early in the coming year. The suction mains will consist of three parallel lines of 24-inch pipe running from the station through Joralemon street and the yard of the New York Dock Company to and through the bulkhead at Pier 18, East River, and of a suction box, well and intake to be built near the bulkhead at the same pier, if permission can be obtained from the New York Dock Company.

## Extensions.

Estimates of cost have been made and specifications and plans are being prepared for extensions of the high pressure fire service system for the river front, etc., between the Navy Yard and Greenpoint, and for the Gowanus Canal district. Appropriations for this work have been asked, as well as for a new high pressure fire service station for the Greenpoint and Williamsburg district amounting to \$2,050,000.

## Coney Island System.

The high pressure fire service system at Coney Island gave satisfactory service during the year. The number of alarms received at the station from the protected district averaged a fraction less than two per month. In all instances the pressure was on the fire mains when the firemen arrived at the scene. They found no difficulty in immediately controlling the fires; the only criticism made by the Fire Department has been that of too much rather than too little pressure. The equipment at the station is tested every day and kept ready for service at an instant's notice.

On November 22 a working test at the station lasting forty-five minutes was made by the Fire Department, under the personal supervision of Fire Chief Edward F. Croker, hydrant and nozzle pressure being taken by the Firemen. The following table shows the results of the test:

Size of Nozzle.	Length of 2½-inch Hose, Feet.	Pressure at Nozzle, Pounds.	Calculated Discharge, Gallons Per Minute.	Total Gallons Per Minute.
Hydrant No. 1—				
1¾ inches.....	100	60	450	1,300
1¼ inches.....	100	90	440	
1¼ inches.....	100	75	410	
Hydrant No. 2—				
1¾ inches.....	150	60	360	1,730
1¼ inches.....	150	60	360	
1¼ inches.....	150	52	*340	
1¼ inches.....	150	50	*330	
1¼ inches.....	150	52	340	
Hydrant No. 3—				
1¾ inches.....	150	50	330	1,340
1¼ inches.....	150	50	*330	
1¼ inches.....	150	50	*330	
1¼ inches.....	150	50	330	
Total delivery.....				4,350

Hydrant pressure, 125 pounds.

Pressure at station, 132 pounds.

The foregoing results show that the system is as efficient as shown on previous exhibition and official tests. All the streams obtained were excellent fire streams; some of them would be termed "unusually strong" streams and difficult to hold nozzle without special appliances.

The grounds at the pumping station have been seeded and sodded, and also fenced, thus materially improving the appearance of the station.

## Seventy-two-Inch Steel Pipe Line.

Owing to the need of additional conduit capacity for Brooklyn, a need which has made itself felt for a number of years, it was decided to lay a 72-inch steel main from the City line to the end of our watershed, and as the present policy of the Department is to do away with the repeated pumping of water, which was a feature of the old system of supply, it was decided to make this steel main a force main, and to install pumping machinery at the new infiltration gallery systems capable of pumping water from the sources of supply through the steel main direct into the distribution system and the Ridgewood Reservoir.

The funds which were available were sufficient only to allow of contracting for that portion of the steel pipe line which extends from Pitkin avenue to Clear Stream pumping station, including a 48-inch cast iron main between Pitkin avenue and the Ridgewood station. The contract for this work, as previously said, was awarded to the T. A. Gillespie Company, and they were ordered to begin work on June 19.

The contractor has carried out the work with exemplary diligence, and up to date there has been completed in all about 24,000 feet, which brings the end of the completed steel pipe line to about opposite our Jameco pumping station. All of the 48-inch pipe (about 4,300 feet) has been laid, and the work still remaining to be done on this part of the contract is about some fifty (50) feet of cast iron pipe, in order to make the connection to our old conduit at the Ridgewood pumping station, so that, if necessary, it could be used in an emergency to supplement the carrying capacity of the conduit. It is very essential that the necessary funds be obtained to permit of extending the steel pipe line to Massapequa in the near future.

## Driven Wells.

Considerable work was done by the driven well gangs, cleaning and repairing old wells and driving new wells at various stations. New plants were put in at Amityville and Seaford, and work is being done on the new plant at Morris Park.

On July 25 bids were opened for furnishing and driving deep wells at Aqueduct, St. Albans, Rosedale, Spring Creek, Forest Stream and Clear Stream pumping stations, and between Wantagh and Massapequa. The lowest bidder was George W. Phillips, the amount of his bid being \$64,401.55. The contract was awarded to Mr. Phillips, and he was ordered to begin work on October 1. The contractor has done work at Forest Stream, Clear Stream and Rosedale stations.

Contract and specifications and plans for sinking shallow wells at Gravesend and Canarsie and for driving deep wells at Spring Creek are being prepared. Bids for this work will probably be received early in the coming year.

A contract and plans for same have also been prepared for driving or sinking deep and shallow wells at Oconee, Baiseleys, Springfield, Watts Pond, Woodhaven, Shetucket, Lynbrook and Rockville Centre pumping stations. This contract will be advertised early in 1907.

## Pumping Stations.

## Mt. Prospect.

The amount of water pumped into the reservoir system at this station was comparatively slight, as the Davidson engines at Ridgewood have furnished an adequate supply to the system. As a result the reservoir engines at this station were in operation only about 140 days during the year. On the tower service the pumping has been increased from a daily average during 1905 of 4,582,000 gallons to a daily average during 1906 of 5,307,000 gallons, and since July the tower has been kept practically full during all hours of the day and night, so as to furnish adequate pressure at the high points of the tower system.

Owing to the increased consumption in the districts supplied by the tower service it has been and will continue to be necessary to operate the steam turbine pumping engine at this station, in connection with one of the other engines, continuously day and night. This turbine engine, when running, makes such a noise as to be very annoying to the immediate neighborhood. I fear that the Board of Health will be asked to have this engine shut down over night. Complaints were made in the past concerning the operation of this engine, and efforts were made to obviate the trouble, but apparently without success. This engine could be utilized elsewhere in the service, where it would not be a nuisance, and therefore I think it advisable to replace it with another one.

A contract has been awarded to Messrs. Hammond & Sloane for a new 24-inch suction main for this station, which is badly needed. Work on this main will be commenced as soon as weather permits, and it is expected that it will be in service sometime in May, 1907.

The old steam pipe from the boilers to engines No. 3 and No. 4 at this station has been removed, and a new 5-inch line installed in its place. The old boiler feed-water heater, which was worn out and leaked badly, has been replaced by a new one. The old circulating pump for the boilers has been replaced by a new Davidson pump, of the same size as the feed pumps, and connected so as to feed the boilers from both the reservoir and tower mains. Engines Nos. 3 and 4 have been overhauled, also the air pumps for these engines. It was found necessary to replace the ball-bearing of the turbine engine. No repairs to the boilers have been necessary, they being in good condition.

## Gravesend.

The average amount of water pumped per day at this station was 2,915,000 gallons. Only minor repairs were necessary during the year, except to Worthington engine No. 1, which was thoroughly repaired by the maker.

The work on the new station has been practically completed, there remaining only a few finishing touches to be done. The Snow Steam Pump Works, the contractors for the installation of the new engine at this station, have delivered and erected the engine, but have not finished up the small work around same, as until the boilers are installed the engine cannot be tested and turned over to the City. The United Heating Company, the contractors for the boilers, having failed in business, and no satisfaction having been obtained from the securities, their contract was considered abandoned, and it was readvertised, bids being received on October 31. The contract was awarded to the lowest bidder, Mr. Thomas F. Purcell, the amount of his bid being \$11,700. The contractors for the steamfitting, Messrs. William Horn & Co., have delivered the feed and vacuum pumps and open heater on the ground, but have not been able to do anything further on their contract by reason of the boilers not being in place. The completion of this work will depend upon how soon the boilers are installed. Contracts for sinking the shallow wells and laying suction mains and for the grading required at the station have been forwarded. These contracts will be advertised early in the coming year.

## New Utrecht.

The average amount of water pumped per day at this station was 1,559,000, slightly under the average amount pumped last year. The engines at this station were in bad condition, and an order was given to Mr. H. R. Worthington to repair same. He is now doing the work of overhauling them.

## Canarsie.

On May 2, 1906, bids were received for the erection of the Canarsie Pumping Station, a new driven well station to be located near Avenue D and Remsen avenue. The lowest bidders were Richard Whalen & Co., the amount of their bid being \$23,781. The contract was awarded to them, but was later assigned by them to Henry Newman. The contractor was ordered to begin work on September 12. Quite some work has been done by the contractor on excavation up to December 19, when work was suspended.

On May 2 bids were also received for the erection of the two pumping engines at this station. The contract was awarded to the lowest bidders, the Marine Engine and Machine Company, and they were ordered to begin work on July 20. Most of the heavy castings for the engines have been made and work is being done in the machining of the same.

The contract for the boilers was awarded to B. Franklin Hart, Jr., & Co., and they were ordered to begin work on them on June 25. The contractors have completed all the shop work on these boilers, and they have been shipped. They cannot be erected, however, until further progress is made with the building.

Bids for the steam heating were received on May 2, and the contract awarded to Blake & Williams, the lowest bidders. No work can be done on this contract until the boilers are in place and the building under way.

On August 29 bids were received for doing all the grading, etc., at this station, the Newman Construction Company being the lowest bidders. The contract was awarded to them, and they were ordered to begin work on November 12. Some work of excavation has been done by the contractors.

A contract for the sinking of the wells and the laying of the suction mains at this station has been prepared and forwarded.

#### New Lots.

Through the installation of a temporary plant at this station the average amount of water pumped per day has been increased by about 2,500,000 gallons. The temporary plant was installed and connected by the Department men, and it was started on July 5. Only minor repairs have been necessary at this plant since it was put in operation.

The engines and boilers at the old station have been in constant operation throughout the year, and only stopped for minor repairs. The pistons of the pumps have been fitted with new glands and bolts on the water end. The boilers at this plant have had the brick work and the blow-off and water-column piping repaired. The tubes of these boilers require attention, and as soon as the new pumping plant is in operation they will be overhauled. The smokestack for these boilers was blown down and a new one has been erected.

The contractor for the erection of the new pumping station has completed all the work under his contract, and the final estimate was forwarded on October 1, 1906.

B. Franklin Hart, Jr., & Co., the contractors for the boilers, have also completed the work on their contract, and the boilers have been in use since July. The contractor for the steam fitting has been greatly delayed by the noncompletion of the pumping engines, but has taken measurements and expects to complete his work as soon as the second pump is installed.

The Marine Engine and Machine Company, who have the contract for the two pumping engines at this station, have one pump nearly completed, and most of the second pump has been shipped. Both of these pumps should have been ready for operation on August 23.

#### Ridgewood, North Side.

On April 4, 1906, a contract was entered into with Mr. Walter E. Parfitt, for the preparation of plans and specifications for the remodeling and enlarging of this station. After the completion of the plans and specifications, the contract was advertised and bids received on November 7. These bids were, however, rejected, and the architect directed to make the necessary changes in the plans and specifications. It is expected that the contract for this work will be readvertised early in the coming year.

Bids were received on July 25 for the erection of two 23,000,000 gallon and two 15,000,000 gallon pumping engines in the remodelled station; the lowest bidders were the Davis & Farnum Manufacturing Company, and the amount of their bid was \$340,000. The contract has been awarded to them.

On December 26, bids were received for installing eight water tube boilers at the new station, the Heine Safety Boiler Company being the lowest bidders.

On September 26, bids were received for the erection of a new machine shop and office at this station, and the contract was awarded to the lowest bidder, Mr. Charles H. Packworth. The contractor was ordered to begin work on December 12. The concrete work below grade has already been completed by him, and some work has been done on the brick walls.

#### Beam Engine.

This engine was fitted with a new set of United States packing rings. New valves were put in main pump; new heater was put into main line to the boiler feed pump; the air pumps were repacked, foot and delivery valves overhauled, new set of metallic packing rings were put in the main piston rod boxes, the main links and crank pins were overhauled. The brasses on the crank pins cracked, and were replaced with new ones. New frame and screen was made and placed in well. This engine is in fair condition.

#### Triple Expansion Engine No. 1.

The pumps were examined and 200 old valves were replaced; the stuffing boxes were repacked, and new service water pipe and primary heater were placed. Leaky jacket connections and minor repairs as were found necessary to keep the engine in constant operation, were made, these including piping primary heaters, suction pipe repairs, etc. This engine, when the new engine in the South Side plant is installed and ready for operation, will have to be put out of commission, examined and thoroughly overhauled. This engine has been in constant operation during the past year, with the exception of a few hours now and then to make the repairs mentioned.

#### Triple Expansion Engine No. 2.

Necessary packing was made on the rods, valves and compensators, to keep the engine in operation, and 250 new valves were placed in the pumps. The primary heater was repaired and new tubes replaced; the high-pressure valve stem was repaired, the condenser overhauled, and a number of new tubes placed. This engine will be stopped as soon as the opportunity presents itself to make temporary repairs. The well of this pump was examined and thoroughly cleaned.

#### Triple Expansion Engine No. 3.

This engine was stopped a number of times for a short period to examine the pumps; new valves were placed as required; stuffing boxes were repacked where necessary. The well of this pump was examined and the screens thoroughly cleaned. This engine will also have to be put out of commission when the new South Side plant is in operation.

#### Davidson Engines.

These engines have been kept in constant operation and only stopped for a few hours, from time to time, to allow pump examinations, replacing of pump valves, adjustment of steam valves, etc. New cast iron plungers were made and placed in the water ends and new pump valves put in. Packings were renewed continuously. Valve chambers of air pumps of Nos. 1 and 2 were refitted with a complete set of valves and springs. The condenser was refitted with new water service piping, the feed pumps to the boilers were thoroughly overhauled and repaired, new valve glands and stuffing boxes placed.

The contract to repair the steam ends on these engines has been awarded to the Davidson Pump Company, but to date we have been unable to allow the contractors to begin work, owing to the necessity of keeping the engines in operation. When the new engine is in service the contractors will be notified to commence work. These engines, at their best, are extravagant to maintain and operate, and will be replaced with engines of a modern type, now contracted for.

#### West Side Boiler Plant.

During the past year these boilers have had no repairs, only cleaning and washing at regular intervals. The stop-valves on all these boilers were repacked from time to time. The boilers are in fair condition. The New York Grate Bar Company, who have the contract to install the "Coe Combustion System" on these boilers have made very little progress. We have made every effort to make them complete their work, and as we have made no provision for the supply of broken coal (the kind used in this battery), this work should be pushed to completion as quickly as possible.

#### Morris Boilers.

The repairs to these boilers, made by contractors B. Franklin Hart, Jr., & Co., are about completed; the last boilers having been tested on September 18. The safety valves on boilers Nos. 3, 5 and 10, and the relief valve on Nos. 1, 2, 3, 4 and 10 have been repaired and new gauge cocks fitted on the boilers. In boilers Nos. 2, 4, 6, 9 and 10 new bridge walls were placed. In boilers Nos. 4, 5 and 6 feed piping

was repaired. No. 10 boiler was fitted with a new 6-inch stop-valve; the 12-inch main steam line was repaired; new steel rods were placed in the feed pump; the jacket return pumps were fitted with new tool steel rods, new valves and plungers. Patterns have been made and sent to the foundry for new grate bars for the Beggs boiler.

#### Davidson Boilers.

These boilers are in fair condition. The New York Grate Bar Company have completed the work of installing the "Coe Combustion System." New bridge walls were placed and the furnaces were relined in boilers Nos. 14, 15 and 19. These boilers have been washed and cleaned regularly, and the buckwheat size coal is now being used on the same.

#### Coal Conveyor.

This conveyor, owing to the increased consumption of coal since the buckwheat size has been introduced, has been kept in service continuously. Minor repairs have been made from time to time as were found necessary.

#### Ridgewood, South Side.

On May 16 a contract was awarded to Messrs. Donegan & Swift, for the installation of a temporary boiler plant at this station, so as to allow us to take out the old boilers which are to be replaced by new water tube boilers. This temporary boiler plant was put in service the latter part of October, and has been kept in constant service ever since.

The contract for the new water tube boilers was awarded to R. F. J. Gerstle Company, and he was ordered to begin work on March 3. The contractors have taken out the old boilers and have started on the erection of the new ones. All of the material is on the ground and progress is being made on their erection.

On September 21, 1905, a contract was awarded to H. R. Heinicke, Inc., for erecting two new brick chimneys at this station, but the contractors were not allowed to start taking down the old east chimney until October 1, 1906. Very good progress has been made on the erection of the new chimney, which is now nearly completed.

The contractors for the temporary pump at this station, the Borough Construction Company, were not allowed to start work on their contract until October 1. They have made very rapid progress in the dismantling of the old pump and the erection of the new. They are practically ready to put the pump in operation as soon as we are able to furnish them steam from the new boilers.

#### Worthington Engine No. 1.

This engine was refitted with new accumulator rams, new gland stuffing box, bushing and bolts and new compensating cylinder rams were fitted. The pumps on this engine were thoroughly overhauled, 208 valves, 100 valve plates and 50 valve springs were placed. Owing to the bad condition of the engine, the main and cut-off valve rods had to be repacked or readjusted a great deal oftener than would otherwise be necessary.

#### Worthington Engine No. 2.

The main and cut-off valves and rods were packed regularly, and charging valves were repaired; compensating cylinder and accumulator were repacked regularly. The pipe connections on jacket trap were renewed and trap repaired. The pump end was examined and valves, plates and springs replaced with new ones where necessary.

#### Worthington Engine No. 3.

The main cut-off valves and rods and the compensating cylinder and accumulator were packed regularly, the air pumps were overhauled and packed and new rods placed in same, new air valves and charging valves were placed.

#### Worthington Engine No. 4.

The main cut-off valves and rods and the compensating cylinder and accumulator were packed regularly, the pumps were overhauled and valves and springs replaced where necessary. This engine showed signs of serious jacket leaks in the cylinder head; experiments were made with the object of cutting out jacket steam from the cylinder head by by-passing them; this experiment was not entirely satisfactory, but was quite an improvement over the previous condition.

#### Worthington Engine No. 5.

This engine has been completely overhauled by H. R. Worthington, on a departmental order, and since these repairs have been made the engine has given good service until the latter end of December, when we experienced considerable trouble with the pump valves, it appearing that the holes in the valves were too small, causing them to bind hard on the valve guard.

In addition to this trouble, the high pressure piston on No. 1 side worked loose and broke the piston and rings. New pistons were ordered from H. R. Worthington, and prompt delivery of same is expected, so we can place the engine in service again. The breaking down of this engine has seriously crippled the service.

The walnut lagging on these five engines is in a disgraceful condition, and in a short time it is proposed to remove same and cover these engines with Russia iron lagging.

#### Engine No. 49.

This engine was kept in constant operation until the early fall, when it was dismantled and removed during the month of October, under a contract with the Borough Construction Company of Brooklyn.

The twenty-million-gallon centrifugal pump to replace this engine is installed and will be put into service when the contractor furnishing the new water tube boilers and piping has connected up the same.

The air pump discharge on this new engine has been connected to a large iron tank placed by the Department. This tank will be connected to a pump and its contents discharged into the sewer. The object of placing this tank was to receive all the drips and drains from the main engines that formerly were allowed to drain into the cellar and from thence into the conduit.

#### Strong Boilers.

During the year the furnaces in the boilers of this battery were repaired, new dead plates were placed and the arches were rebuilt. They have been kept in constant service since late in the summer, only have been out of service long enough to make temporary repairs. The tubes in these boilers are in bad shape and will be removed as soon as the new water tube boilers are placed in service. The main stop valves are also in bad condition, and owing to this we are compelled to disconnect piping on boilers in order to allow men to go inside to scale same. These valves are also to be renewed. The blow-off piping has been removed during the year.

The New York Grate Bar Company completed their work of installing the "Coe Combustion System" in this battery. Buckwheat size coal is now being used entirely.

#### Bigelow Boilers.

This battery was kept in service until October, when the temporary boilers on the east and west sides were connected and put into service to replace same. R. Gerstle & Co. have dismantled and removed this battery and are now installing the new water tube boilers.

#### The West Side Temporary Boiler Room.

The four locomotive boilers in this battery, including the steam piping, etc., were furnished and installed by Messrs. Donegan & Swift, of New York. This battery was placed in service the latter part of October, 1906, and has been kept in constant service ever since, with the exception of a short time to make repairs to grate bars. The boiler house or shed was completed about the first of November by the Department force.

#### The East Side Temporary Boiler Room.

This battery of three locomotive boilers, two of which were furnished and installed by the Borough Construction Company of Brooklyn, and the other moved from the temporary plant at Spring Creek, were connected up by the Department force, and were placed in service in conjunction with the four boilers in the west boiler room.

This comprises all the boilers installed to replace the Bigelow battery. They have been kept in constant service since their installation. During the last quarter the old stack on this side was removed and the Heinicke Company has about completed a new one.

#### Dynamo Room.

The dynamo has been run throughout the year; only minor repairs have been found necessary.

The coal conveyor for this station on the south side is in poor condition, and we have been compelled to call upon the C. W. Hunt Company (the makers) to repair same. Owing to the limited amount of time that could be spared, we have made only such repairs as would keep it in service. The engine is also in poor condition and every effort will be made to put it in good condition as soon as possible.

#### Spring Creek.

Engine No. 1 at this station has been refitted with new water cylinder linings, new rods and new water pistons and other minor repairs were made. The water ends on the Davidson pump were overhauled, pistons repacked and defective valves removed and new ones placed. The boilers at this station have been fitted with the "Coe Combustion System" by the New York Grate Bar Company. The superheaters installed during the year are giving satisfactory results.

The temporary plant was shut down on March 15 and subsequently dismantled, one of the vertical boilers being removed to Amityville and the Davidson pump being removed and installed at the St. Albans pumping station.

#### Aqueduct.

This plant was put in operation in the middle of February, and has done continued pumping since then. Only slight repairs have been necessary.

#### Oconee.

During the first quarter of the year the Davidson pump and boilers were taken from the Shetucket plant, which had been abandoned, and installed at this station. This was done to insure continuous pumping when it was necessary to shut down for repairs. The furnace of the old boiler was relined. The water cylinders of the pumps are in bad condition and will have to be replaced.

#### Baiseleys.

One engine and one pump were kept in constant operation; only minor repairs were found necessary.

#### Jameco.

The Davidson pump was run continuously throughout the year, with the exception of shutting down for small repairs. The steam end of this pump is in bad condition and an order has been given to M. T. Davidson to put the same in good condition.

Slight necessary repairs were made to the Worthington engine. The centrifugal pump used in connection with the Baiseleys filter plant has been run continuously during the year, with the exception of a short shut-down in the fall for some slight repairs to the engine and to repair a crack that appeared in the meter. Minor repairs have been made to the boilers at this station, but there has been no opportunity to put the boilers out of service long enough for cleaning, etc.

#### St. Albans.

This plant was put in operation the latter part of 1905. The two centrifugal pumps installed at this station by Messrs. Donegan & Swift have given continuous trouble since their installation. Every effort was made to repair them and keep them in running order, and finally the contractors were notified to remove them to their shops, rebuild them and return them to the City when in good condition. To take the place of these engines the Davidson pump from the abandoned temporary plant at Spring Creek was removed to this station and erected by the Department men. The boilers have given good service, no repairs being needed.

#### Springfield.

During the year the Davidson engine at this station was refitted with a new lining, and a new water piston, furnished by M. T. Davidson, was placed in this pump; the steam end and water cylinder were thoroughly overhauled. The engine is now in good condition. The filter engine has been run when required and has given satisfaction. Minor repairs were made to boiler No. 1. Boiler No. 2 is in good condition.

#### Rosedale.

This plant was started in the early part of the year and has been running continuously since. no repairs of consequence have been necessary.

#### Forest Stream.

This plant has been kept in constant operation all the year, except when the engines were shut down for repairs. Minor repairs were made to both engines and boilers.

#### Clear Stream.

This station has run the whole year and only minor repairs have been necessary.

#### Watts Pond.

This plant is old and the engine and boilers are in very bad condition. The engine has been kept running all the year with good results, considering the poor condition of the plant. Only ordinary repairs have been made. The air pump has been overhauled and put in good condition. The boilers at this station are in a very bad condition and will have to be replaced.

#### Smiths Pond.

Engine No. 1 at this station was completely overhauled. A new steam chest cam shaft and pin have been ordered from M. T. Davidson for engine No. 2, and will be put in place as soon as the engine can be shut down long enough for the purpose. Necessary repairs have been made to the boilers.

#### Millburn.

This station has been in operation during the entire year and only stops of short duration were made. The pumps were refitted with valves, springs and guards when necessary. The valve motion on the Davidson engines was repaired from time to time, and these engines are now in fair condition. The Worthington engines are not in the best of repair, and at the first opportunity they will be stopped and overhauled. The dynamo engine has been overhauled and is now in good condition. The boilers at this station are in very bad condition. The tubes on both batteries will have to be renewed. Some work has been done in renewing the tubes of the boilers of the east battery; when this is completed the same will be done to the west battery of boilers.

Minor repairs have been made to engines and boilers at Agawam, Merrick, Matowa, Wantagh and Massapequa.

#### Seaford.

This station was started on August 20 and ran for a few days, when it was shut down on account of a broken cylinder-head; necessary repairs were made and the plant was again started on August 28, and has since been running continuously, with the exception of a number of short shut-downs to make repairs to the boilers.

#### Amityville.

This station is situated near the Suffolk County line. It was run for a short time last spring and then shut down. It was again started on September 19. About the middle of October it was again shut down and dismantled.

#### Ponds, Conduits and Reservoirs.

The usual work of patrolling and cleaning the ponds and streams, and of protecting the supply from pollution, has been carried on during the year under the supervision of Superintendent G. V. Brower.

The following table gives a summary of the work done in cleaning closets and cesspools to prevent surface pollution of the supplies:

Near Foster's Meadow stream.....	1,768
Near Springfield stream.....	2,755
Near Valley Stream and Pines Brook.....	1,106
Near Millburn stream and Schodack Brook.....	820
Near Wantagh and East Meadow streams.....	1,150
Near Hempstead .....	9,789
Along conduit line .....	3,985

The total cost of this work during the year was \$4,880.28.

#### Mt. Prospect Laboratory.

##### Collection of Samples.

Daily samples have been taken from the terminus of the aqueduct at both the North and South Side pumping stations at Ridgewood, and from the taps at Flatbush and Seventh avenues and at Flushing and Clermont avenues. These samples have been examined physically and bacteriologically, and once a week microscopically and chemically. Weekly samples have been collected from the distribution reservoirs for complete sanitary analysis, and weekly samples from all the surface supplies have been examined physically and bacteriologically. Partial chemical analyses have been made monthly of all surface supplies, and complete analyses quarterly. Complete analyses have been made monthly of all filtered supplies (mechanical plants, filter beds and infiltration galleries). Samples from most of the driven well stations have such slight fluctuations in quality that complete analyses are required only quarterly. Monthly, weekly, and, in some cases, more frequent analyses have been made of those ground waters that are high in chlorine and iron.

##### Analytical Work on Water.

The following figures give the amount of work which has been done for the Borough of Brooklyn at Mt. Prospect and Jameco Laboratories during the year 1906:

##### Total Samples of Water Analyzed by Laboratories.

Mt. Prospect Laboratory .....	3,811
Jameco .....	2,828
Total.....	6,639

Total number of samples analyzed for the Borough of Brooklyn.....	6,639
Physical examinations .....	4,628
Complete chemical analyses .....	393
Partial chemical analyses .....	1,782
Microscopical examinations .....	1,191
Bacteriological examinations .....	5,933
Bacteriological tests for bacillus coli .....	3,513

##### General Analytical Work.

The following table gives an idea of the general analytical work done during the year:

Cement samples examined .....	84
Coal samples examined .....	59
Oil samples examined .....	40
Sand samples examined .....	10
Metals and alloys examined.....	9
Paint supplies examined .....	8
Alum examined .....	2
Mineral analyses of water, complete.....	3
Mineral analyses of water, partial.....	105
Mineral analyses of cement.....	2
Special tests and experiments.....	110

##### Reports.

Weekly reports have been made giving the quality of the water in the distributing system.

During the year 461 special reports have been made on the quality of the numerous sources of water supply, and on oil, coal and constructional materials used in the Department for the Borough of Brooklyn. The following gives an idea of the increase in special work for Brooklyn for the year 1906, as compared with the four previous years:

Special Reports—1902, 111; 1903, 135; 1904, 243; 1905, 375; 1906, 461.

Weekly reports have been made on the daily efficiency of the filters at Baiseleys, Springfield, Hempstead and Forest Stream, and periodical reports have been sent on the condition of the water in Hempstead subsiding basin. The quality of the water received from the Queens County Water Supply Company has been reported weekly, and also the quality of the water from the Spring Creek pumping station.

Special tests and studies have been made in relation to the determination of the presence of B. coli in water; of the amount of lime in water; on various sands for filtration purposes; on the removal of algae and intestinal germs from water supplies by the copper sulphate treatment; and on the various methods for the purification of drinking water.

##### Inspections.

Monthly inspections have been made of the entire Brooklyn watershed, and, with the co-operation of Mr. Brower, Superintendent of Ponds and Reservoirs, a considerable number of nuisances have been abated.

##### Quality of the Water.

The following table gives a comparison of the average quality of the water for 1905 and 1906, from the two influxes at Ridgewood reservoir and from the taps at Flatbush and Seventh avenues and at Flushing and Clermont avenues:

	Ridgewood Influxes.		Tap Waters.	
	1905.	1906.	1905.	1906.
Physical Examination.				
Turbidity .....	4.000	4.000	4.000	4.000
Color .....	14.000	12.000	13.000	10.000
Per cent. of samples with distinct vegetable odors..	....	0.200	0.100	0.300
Per cent. of samples with odors of decomposition.	0.400	0.300	0.600	1.700
Per cent. of samples with odors due to organisms.	....	....	0.700	2.600
Chemical Examination.				
Albuminoid ammonia .....	0.049	0.033	0.061	0.040
Free ammonia .....	0.021	0.021	0.012	0.007
Nitrites .....	0.003	0.003	0.003	0.003
Nitrates .....	1.060	1.480	1.010	1.480
Total solids .....	69.000	81.000	....	....
Chlorine .....	7.200	8.700	....	....
Hardness .....	26.000	29.000	....	....
Alkalinity .....	11.000	15.000	....	....
Iron .....	0.440	0.530	....	....

	Ridgewood Influxes.		Tap Waters.	
	1905.	1906.	1905.	1906.
Microscopical Examination.				
Microscopic organisms .....	31	51	1,329	520
Amorphous matter .....	231	280	234	219
Bacteriological Examination.				
Bacteria, per c. c. ....	363	269	321	186
Per Cent. of Positive Tests for B. Coli—				
In 0.1 c. c. ....	3.900	3.400	2.200	1.700
In 1 c. c. ....	17.600	12.400	10.000	6.600
In 10 c. c. ....	36.300	46.100	27.600	32.700

It will be seen from a comparison of the results in the foregoing table that there is a slight increase in the mineral matter of the water supplied to the Borough of Brooklyn during the year 1906, due to the use of a larger amount of ground water, but in other respects the quality of the water compares favorably with that delivered during the previous year.

#### Necessity for Covering Distributing Reservoirs.

At certain seasons of the year there developed heavy growths of microscopic organisms, many forms of which cause disagreeable tastes and odors in the supply. The reservoirs at Mt. Prospect and Ridgewood have given an unusual amount of trouble in this connection, due to the fact that a large percentage of water from underground sources is used. Such waters are particularly favorable to the development of these growths.

Diagram No. 3 shows the very small number of microscopic plants and animals in the water flowing into the Ridgewood reservoir and the great increase in the growths due to storage in the sunlight.

If these distributing reservoirs are protected from the sun by suitable covers the microscopic growths and disagreeable tastes and odors which periodically occur in the supply would be entirely eliminated, and the water would be clearer, colder and better in every respect. These covers for distributing reservoirs have been employed for many years both in this country and abroad, and have long proved themselves successful in this respect. There is no reason why Brooklyn should be behind other cities in this matter or should further delay this very necessary construction.

#### Filter Plants.

The operation of the filter plants has been under the efficient direction of Mr. Theodore DeL. Coffin, Inspector of Filters, and the greater part of the following data and tables was compiled by him. Four filter plants are now in operation, two of the gravity mechanical type and two of a modified slow sand type.

#### Hempstead Filter.

This was the first filter built by the Department and was situated just south of the storage reservoir. Hempstead stream formerly fed into this reservoir from the north, but becoming contaminated, a 36-inch by-pass was laid through which the stream could be wasted. This by-passed water is that which the Hempstead beds, completed January, 1904, were designed to treat. The two original beds are of equal size and have a combined area of one acre. At the selected site the surface loam and sand were removed, and on this level bed was laid 6-inch vitrified pipe with open joints and surrounded with gravel. One end of these pipes was closed and the other connected to an 18-inch vitrified pipe, cement jointed, leading to the north end of Hempstead Pond. Embankments 6 feet in height were built about the beds. The raw water connections had gates. Otherwise no provision for the control of rate was made. Later weirs of special design were placed on the ends of the 18-inch collectors so that various rates could be approximated. In these two original beds the sand used had an effective size of 0.27 and a uniformity coefficient of 1.74.

Gaugings in the dry season of 1905 showed that these beds were not able to care for all the waste water, hence the plant was enlarged by the construction of two new beds south of the two already described. Each of the new beds has an area of 0.68 of an acre. The site was leveled, covered with 14 inches of gravel in which were set 4-inch vitrified pipes, open joints, 5 feet centre to centre, connecting with 18-inch vitrified collectors. Over the gravel was placed 2½ feet of sand having an effective size of 0.25 and a uniformity coefficient of 2.12. Embankments 6 feet in height surround the beds. The effluent collectors from the new beds, and from the old as well, are led to suitable weirs controlled by gates, after which the filtered water flows by gravity into the top of the conduit. The necessary pipes and connections are made for cleaning by the Brower process, described under the heading of operation. The capacity of the plant, including the original beds and the two which were finished in November of this year, is 7,000,000 gallons per day.

During the coming year the water of Hempstead stream will first pass through the subsiding basin above the Hempstead storage reservoir before going to the filter beds, so that the preliminary sedimentation which the water will receive will not only improve the water filtered, but reduce the operating expenses by allowing of longer periods of time between the cleaning of the beds.

#### Baiseleys and Springfield Filters.

In March of 1904, two gravity mechanical filters were put into service—one known as Baiseleys Filter, at the Jameco Station, and having a capacity of 5,000,000 gallons per day when operated at the rate of 128,000,000 gallons per acre per day—the other known as Springfield Filter, at the pumping station of the same name, and having a capacity of 3,000,000 gallons per day.

Sulphate of alumina is used as the coagulant, and at such times as the alkalinity of the applied water is not sufficient to provide the base made necessary by the quantity of the alum employed, soda ash is used to supply this deficiency. Each plant is housed in a frame structure which also contains the necessary chemical solution tanks, sedimentation tanks, air compressors, wash engines and other auxiliaries.

The sand employed at the Springfield plant had an effective size of 0.47 and a uniformity coefficient of 1.77, while at the Baiseleys plant the effective size was 0.46 and the uniformity coefficient was 1.63. The sand at the Baiseleys plant after having been used for some time had distributed itself in the tanks according to the following table:

	Tank No. 3.		Tank No. 8.	
	Effective Size.	Uniformity Coefficient.	Effective Size.	Uniformity Coefficient.
Surface .....	0.35	1.51	0.38	1.42
Fifteen inches below surface.....	0.47	1.59	0.45	1.67
Thirty inches below surface.....	0.50	1.56	0.47	1.59

In January of the present year the finer portion of the sand in the tanks at Baiseleys had to a great extent been washed away from the top over the baffle boards, and it became necessary to replace the portion which had been removed in order to maintain a proper degree of efficiency. At this time a combined sample of the same in the filters showed an effective size of 0.51 and a uniformity coefficient of 1.47. This was thoroughly mixed with 16 per cent. of sand from Forest Stream, having a uniformity coefficient of 0.27 and an effective size of 2.00, and the result was a sand

very similar to that originally employed, having, by analysis, an effective size of 0.46 and a coefficient of 1.72.

#### Forest Stream Filter.

On January 1, 1905, the Forest Stream Filter, at the pumping station of the same name, was put in operation. Here there are two slow sand beds of one acre each. The construction is similar to that of the new beds at Hempstead except that the laterals are 6 inches, the collectors 24 inches. The sand at this point required washing. The effective size was 0.21 and the uniformity coefficient 2.18 before washing. After being prepared for the beds it had an effective size of 0.27 and a uniformity coefficient of 2.00.

The effluent collectors from each bed, suitably gated, lead to a central well from which the filtered water is pumped directly into the conduit. By varying the pumpage the combined rate may be regulated, and by opening or closing the proper gate the rate of either bed may be increased or diminished as desired. One of the beds is constructed to be cleaned by the Brower method. The capacity of the plant at a maximum is about 5,000,000 gallons per day.

#### Operation.

The combined total capacity of these filter plants is about 20,000,000 gallons per day, but owing to two particularly dry seasons all of the plants have been operated at a reduced rate during the summer and autumn, especially at Springfield, where in addition to the dry seasons two new pumping stations, drawing from the same area, had so reduced the amount of water coming to the filter that the plant was practically out of service after August 1.

Repairs at Baiseleys have received considerable attention during the year. The air distributing and effluent collecting systems of two units have been thoroughly overhauled, and additional fine sand has been incorporated in every sand bed to replace that removed little by little in the process of washing. Many tank bands have been replaced, and this work is being continued, as practically all the bands are dangerously rusted.

The "Brower" system of removing the accumulation at the surface of the slow sand beds is giving satisfaction. In this method, as developed by Mr. Girdell V. Brower, Superintendent of Ponds and Reservoirs, the beds are divided longitudinally into bays of about 20 feet in width by permanent vertical wooden baffles, extending about one foot above the sand surface. Temporary baffles are placed at the head and foot of all bays but one. By a splendid connection, raw water from an adjoining bed is led into the open channel flowing with a velocity of about ½ foot per second. Men with rakes at the same time disturb the deposited matter which is taken up by the passing water and carried from the bed through a 16-inch pipe provided for that purpose. When the water runs clear, the bay is considered clean. The end baffles from an adjoining bay are removed and placed at the head and foot of the cleaned bay, thus isolating it and opening up a second bay which is treated in the same manner.

The advantages of this method of cleaning are:

1. A great reduction in the cost of cleaning.
2. Economy in the sand, as none is removed from the filter.
3. Cleaning may be done in almost any weather.
4. The time the filter is out of service is reduced to a minimum.
5. The effluent, immediately after starting the cleaned bed, is far better than that resulting from complete removal by scraping.

Table No. 17 attached hereto shows the total amount filtered at each filter plant, as well as the total cost of operation, etc., and the cost of filtration per million gallons.

#### Experiments.

During the year a series of experiments was made on the sterilizing action of chlorine in water. These results are filed under date of June 23, 1906.

From July 5 to August 20, a series of experiments was carried out at Baiseleys to obtain data upon several points suggested by the Brower system of cleaning.

A comparison of the quantities of sulphate of alumina necessary at Baiseleys and Springfield has been made.

The smaller quantity of chemical required at Springfield to treat a water of given turbidity is due largely to a difference in the color of the water, but is also effected by the fact that the sedimentation of this water previous to the application of the chemical is less than for the Baiseleys water. That is, the particles causing the turbidity at Springfield are coarser.

The most interesting point shown by this comparison is the increased amount of alum, due to decreased temperature of the water during the winter.

While the Fuler Experimentation Filtration was in progress, 400 tests upon the impurities in sand and water were made. These tests were carried on primarily to aid in the intelligent operation of the plants, and are kept in daily record form, as a log of the work accomplished by filtration. In order to gain an idea of the relative efficiencies of the several plants, the records for the year have been brought together, as shown in Table No. 18. This table gives the raw water averaged in the two classes; those carrying more than 2,500 bacteria and those carrying less than 2,500 bacteria per cc., or as "storm waters" and "clear weather waters," for they closely correspond. In this respect the Hempstead water is seen to be the worst, with Baiseleys second. The Hempstead water is supplied without sedimentation and is consequently "flashy." As before stated, connections have been made whereby the settling basin above storage reservoir may be used as a source. This storage will probably effect a great change in the water treated in 1907.

That Baiseleys is the hardest water to successfully filter is shown by the average turbidities. The filtrates from all the filters show a good removal of turbidity.

Effluent bacteria average higher in the mechanical filters than in the slow sand, with any kind of water, but for the period that daily tests for B. coli have been made, the mechanical filters appear to give somewhat better results in this respect.

#### Infiltration Galleries.

##### Wantagh.

Water has been pumped from the brick well at these galleries into the conduit continuously day and night, the average pumped per day during the year being 11,500,000.

The work done by the contractors, the New York Continental Jewell Filtration Company, during the year was as follows:

	Pipe Laid.	Manholes Completed.
West leg, linear feet.....	2,303	4
East leg, linear feet.....	3,191	8

The pipe laying is now practically completed, but much work of clearing and fixing remains to be done.

##### Massapequa.

The contractor for the construction of this gallery, Mr. M. J. Dady, has made very good progress during the year. The work done was as follows:

	Linear Feet Laid.	Single Manholes Completed.	Double Manholes Completed.
48-inch discharge main.....	656	....	....
36-inch suction main.....	50	....	....
36-inch vitrified (single line).....	3,871	....	....
33-inch vitrified (single line).....	180	....	....
33-inch vitrified (double line).....	2,319	....	....

	Linear Feet Laid.	Single Manholes Completed.	Double Manholes Completed.
30-inch vitrified (single line).....	937	....	....
27-inch vitrified (single line).....	380	....	....
24-inch vitrified (single line).....	472	....	....
20-inch vitrified (single line).....	528	....	....
Total .....	9,393	24	9

The contractor started pumping from the pump well into the brick conduit on June 9, and water has been delivered into the conduit continuously since then, the average amount per day obtained from this source since pumping was started being about 10,000,000 gallons.

The installation of the six temporary plants along the line of the Massapequa Gallery was completed by Mr. Dady early in the year, and a continuous supply has been obtained from these plants, amounting to a daily average of 4,000,000 gallons.

#### Suffolk County Supply.

In order to test, if possible, the Burr Act, it was decided at the beginning of the year to install a pumping station on the section of land within the boundaries of Suffolk County, lying at the easterly end of the strip purchased by the City for the Massapequa Gallery. The work was commenced on February 19, and by working the men as many hours as possible and doing part of the work by requisition, the wells, station, etc., were completed so as to commence delivering water on March 14. The station was operated until May 29, when it was shut down; it was operated again, however, from September 19 to October 27, when it was finally shut down and dismantled. No action has been taken by the Suffolk County authorities in this matter, and it may be necessary to take further steps to force action by them. If they decide to take no action at all, it seems to me that the City should take the necessary steps to endeavor to have the law repealed, as it is imperative that Brooklyn should have further sources of supply in the immediate future, and the only ones at present known to be available lie in Suffolk County.

#### Contracts.

The following summary shows the contracts which have been prepared and forwarded for approval, printing and advertising and those for which bids have been received, together with the names of the lowest bidders, and the amounts of their bids:

##### Contracts Prepared and Forwarded for Approval, Printing and Advertising.

- (1) For furnishing and delivering cast-iron pipe and special castings.
- (2) For hauling and laying water mains and appurtenances.
- (3) For furnishing and delivering lubricating and illuminating oils.
- (4) For furnishing and delivering semi-bituminous and anthracite coal.
- (5) For furnishing, delivering and erecting a temporary boiler plant, with its connections, at the Ridgewood South Side Pumping Station.
- (6) For furnishing and delivering stop-cocks.
- (7) For setting, replacing and hauling 6-inch hydrant service pipe, fire hydrants and appurtenances, etc.
- (8) For removing all ashes from various pumping stations.
- (9) For furnishing and driving deep wells.
- (10) For architect's services for remodeling and enlarging the Ridgewood North Side Pumping Station.
- (11) For operating six or more temporary pumping stations along the line of the Massapequa Infiltration Gallery.
- (12) For furnishing unskilled labor for excavating and other miscellaneous work in the Borough of Brooklyn.
- (13) For furnishing, delivering and laying water mains and appurtenances in Belmont and Fountain avenues, in Crescent street, etc.
- (14) For furnishing and delivering double nozzle hydrants.
- (15) For furnishing, constructing and erecting a concrete coal shed and culvert and doing all grading, sodding, etc., at the new Canarsie Pumping Station.
- (16) For furnishing, constructing and erecting an engine house for high pressure fire service at Furman and Joralemon streets.
- (17) For furnishing, constructing and erecting an engine house for high pressure fire service at Willoughby and St. Edwards streets.
- (18) For furnishing and delivering semi-bituminous and anthracite coal.
- (19) For furnishing, delivering and laying water mains and appurtenances in Utica, Church and Remsen avenues.
- (20) For furnishing, delivering and installing surface condensers, etc., at the Millburn Pumping Station.
- (21) For furnishing and erecting a wrought iron fence at the old Ridgewood Pumping Station.
- (22) For furnishing and delivering two and four cylinder gasoline automobiles.
- (23) For furnishing and delivering 80,100 gross tons of anthracite coal.
- (24) For furnishing and delivering cast-iron stop-cock boxes and covers.
- (25) For furnishing, delivering and laying a 24-inch water main and appurtenances in Underhill avenue, from Atlantic avenue to the Mt. Prospect Pumping Station.
- (26) For furnishing and delivering two temporary boiler plants and two temporary pumping plants.
- (27) For furnishing centrifugal pumps and engines.
- (28) For unloading, hauling, storing and trimming semi-bituminous coal required for the Millburn Pumping Station.
- (29) For regulating, grading and paving the roadway of Force Tube avenue.
- (30) For hauling and laying water mains and appurtenances.
- (31) For furnishing and delivering cast-iron pipe and special castings.
- (32) For furnishing and delivering cast-iron flanged pipe, special castings, etc.
- (33) For furnishing and delivering double nozzle hydrants.
- (34) For furnishing, delivering, erecting and connecting two boilers and one economizer at the Gravesend Pumping Station.
- (35) For furnishing, delivering and laying water mains and removing existing water mains in Flushing, Franklin, Harrison, Marcy, Metropolitan, etc., etc.
- (36) For furnishing, delivering and erecting a new pumping plant complete at the Spring Creek Pumping Station.
- (37) For unloading, hauling, storing and trimming the coal required for various pumping stations.
- (38) For furnishing, constructing and erecting a concrete culvert and doing all grading, sodding, etc., required at the new Gravesend Pumping Station.
- (39) For constructing sewer, canal and appurtenances for diverting Beaver Creek around Baiseleys Pond.
- (40) For furnishing, constructing and erecting a new pumping station near the Spring Creek Pumping Station.
- (41) For sinking shallow wells and driving deep wells.
- (42) For furnishing and delivering 20,000 gross tons of semi-bituminous coal.
- (43) For furnishing and delivering cast-iron special castings.
- (44) For furnishing, delivering and erecting coal weighing scales at various pumping stations.
- (45) For removing all ashes for various pumping stations.

Contracts for which bids were received, together with the name of lowest bidder and total amount bid on basis of Engineer's estimate of work to be done:

(1) January 8—For unloading, hauling, storing and trimming the coal required for various pumping stations:	
Section 1. Harry Blinn .....	\$7,116 00
Section 2. John B. Reimer .....	4,736 00
Section 3. Harry Blinn .....	5,042 80

(2) February 28—For furnishing, delivering and laying water mains and appurtenances in Blake and Fountain avenues:

Isaac Harris .....

\$14,246 50

(3) February 28—For furnishing and delivering lubricating and illuminating oils:

George B. Hewlett .....

\$4,984 00

All bids for this contract were rejected and the contract readvertised.

(4) April 4—For furnishing and delivering stopcocks:

The Fairbanks Company .....

\$8,487 86

(5) April 4—For furnishing and installing grate bars, blowers, etc., at the Ridgewood and Spring Creek Pumping Stations:

The New York Grate Bar Company .....

\$5,775 00

(6) April 4—For furnishing and delivering double-nozzle hydrants:

Herron Pump and Foundry Company .....

\$29,750 00

(7) April 4—For furnishing, delivering and laying water mains and appurtenances in Fort Hamilton, Gravesend, First, etc.:

Isaac Harris Company .....

\$240,691 50

(6) April 11—For furnishing, delivering and erecting a temporary boiler plant with its connections at the Ridgewood South Side Pumping Station:

Donegan & Swift .....

\$6,486 00

(9) May 2—For furnishing, constructing and erecting the Canarsie Pumping Station:

Richard Whalen & Co. ....

\$23,781 00

(10) May 2—For furnishing, delivering and erecting three boilers at the new Canarsie Pumping Station:

B. Franklin Hart, Jr., & Co. ....

\$18,315 00

(11) May 2—For furnishing, delivering and erecting the necessary steam-fitting and appurtenances at the new Canarsie Pumping Station:

Blake & Williams .....

\$4,565 00

(12) May 2—For furnishing, delivering, erecting and connecting two pumping engines, including foundations, etc., at the proposed Canarsie Pumping Station:

Marine Engine and Machine Company .....

\$38,850 00

(13) May 2—For furnishing and delivering cast-iron pipe and special castings:

Warren Foundry and Machine Company .....

\$143,740 00

(14) May 2—For hauling and laying water mains and appurtenances:

Isaac Harris Company .....

\$42,455 00

(15) May 2—For furnishing and delivering lubricating and illuminating oils and lubricating grease:

William E. Burke .....

\$6,240 00

(16) May 4—For furnishing and delivering semi-bituminous and anthracite coal:

Section 1. George D. Harris & Co. ....

\$12,600 00

Section 2. George D. Harris & Co. ....

15,750 00

Section 3. N. L. Stokes .....

36,900 00

Section 4. Howard S. Downs .....

30,310 00

(17) May 9—For furnishing and delivering double-nozzle hydrants:

Herron Pump and Foundry Company .....

\$30,200 00

(18) May 23—For furnishing, delivering and laying a 72-inch rivetted steel pipe line from Brooklyn to Valley Stream:

The T. A. Gillespie Company .....

\$1,143,105 00

(19) May 24—For furnishing and delivering semi-bituminous and anthracite coal:

Section 1. George D. Harris & Co. ....

\$54,800 00

Section 2. George D. Harris & Co. ....

209,532 00

(20) June 13—For removing all ashes from various pumping stations:

Bedford Construction Company .....

\$10 75

(21) July 3—For furnishing and delivering 80,100 gross tons of anthracite coal:

Howard Bowns .....

\$237,569 00

(22) July 25—For furnishing, delivering, erecting and connecting a pumping plant in the remodeled Ridgewood North Side Station:

Davis & Farnum Manufacturing Company .....

\$340,000 00

(23) July 25—For furnishing, delivering and installing superheaters and piping at various pumping stations:

Power Specialty Company .....

\$11,780 00

Above bid was rejected.

(24) July 25—For furnishing and delivering stopcocks:

Rensselaer Manufacturing Company .....

\$35,375 00

(25) July 25—For setting, replacing and hauling 6-inch hydrant service pipe, fire hydrants and appurtenances:

Isaac Harris Company .....

\$38,028 50

(26) July 25—For furnishing and driving deep wells:

Section 1. George W. Phillips .....

\$21,642 40

Section 2. George W. Phillips .....

25,086 30

Section 3. George W. Phillips .....

17,692 85

(27) July 25—For furnishing, delivering and laying water mains and appurtenances in Belmont and Fountain avenues, etc.:

James P. Graham .....

\$13,860 25

(28) August 15—For furnishing, constructing and erecting an engine house for high pressure fire service at Furman and Joralemon streets:

Charles H. Peckworth .....

\$64,422 00

(29) August 15—For furnishing, constructing and erecting an engine house for high pressure fire service at Willoughby and St. Edwards streets:

Charles H. Peckworth .....

\$45,423 00

(30) August 15—For furnishing, delivering and laying water mains and appurtenances in Utica, Church and Remsen avenues:

Hammond & Sloane (Inc.) .....

\$54,395 00

(31) August 29—For furnishing, constructing and erecting a concrete coalshed and culvert and doing all grading, sodding, etc., at the new Canarsie Pumping Station:

Newman Construction Company..... \$37,400 00

(32) August 29—For furnishing and erecting a wrought-iron fence with gates at the old Ridgewood Pumping Station:

John Fox & Co..... \$6,966 00  
Leslie McHarg & Co..... 6,966 00

(33) September 19—For furnishing and delivering cast-iron stopcock boxes and covers:

Sections 1 and 2—  
Herron Pump and Foundry Company..... \$15,840 00  
W. P. Taylor Company..... 15,840 00  
Hammond & Sloane Company (Inc.)..... 15,840 00

All bids for above contract were rejected and the contract readvertised.

(34) September 19—For unloading, hauling, storing and trimming semi-bituminous coal required for the Millburn Pumping Station:

Harry Blinn ..... \$2,650 00

(35) September 19—For furnishing and delivering cast-iron pipe and special castings:

U. S. Cast Iron Pipe and Foundry Company..... \$68,375 00

(36) September 26—For furnishing, constructing and erecting a machine shop and office at old Ridgewood Pumping Station:

Charles H. Peckworth..... \$37,844 00

(37) October 10—For furnishing and delivering cast-iron stopcock boxes and covers:

Sections 1 and 2. Herron Pump and Foundry Company..... \$15,037 44

(38) October 10—For furnishing, delivering and laying a 24-inch water main and appurtenances in Underhill avenue, from Atlantic avenue to the Mount Prospect Pumping Station:

Hammond & Sloane (Inc.)..... \$21,576 40

(39) October 10—For furnishing and delivering cast-iron flanged pipe, special castings, etc.:

John Fox & Co..... \$4,193 00

(40) October 10—For furnishing and delivering double-nozzle hydrants:

Herron Pump and Foundry Company..... \$32,480 00

(41) October 24—For furnishing, delivering and installing surface condensers, etc., at the Millburn Pumping Station:

M. T. Davidson..... \$8,950 00

(42) October 31—For furnishing, delivering, erecting and connecting two boilers and one economizer at the new Gravesend Pumping Station:

Thomas F. Purcell..... \$11,700 00

(43) November 7—For furnishing, constructing and remodelling the Ridgewood North Side Pumping Station:

Michael J. Dady..... \$261,000 00

All the bids for the above contract were rejected.

(44) December 26—For unloading, hauling, storing and trimming the coal required for various pumping stations:

Section 1. Augustus Munz ..... \$2,617 00  
Section 2. John Sutter ..... 2,220 00  
Section 3. Harry Blinn ..... 4,380 00

(45) December 26—For furnishing, delivering and erecting eight water tube boilers in the remodeled Ridgewood North Side Pumping Station:

Heine Safety Boiler Company..... \$33,840 00

(46) December 28—For hauling and laying water mains and appurtenances in the Borough of Brooklyn:

Charles Cranford ..... \$52,588 50

#### Tables and Diagrams.

The tables and diagrams attached are as follows:

Table No. 1. Showing monthly record of rainfall at Brooklyn and vicinity, from 1897 to 1907.

Table No. 2. Showing monthly record of rainfall at Hempstead Storage Reservoir from 1897 to 1907.

Table No. 3. Showing daily record of rainfall at Brooklyn and vicinity during 1906.

Table No. 4. Showing daily record of rainfall at Hempstead Storage Reservoir during 1906.

Table No. 5. Showing highest and lowest monthly range and average temperatures (degrees Fahrenheit) for ten years, between 8 and 9 a. m., at Hempstead Storage Reservoir.

Table No. 6. Showing average daily consumption of water in Brooklyn for each month during 1906.

Table No. 7. Showing average daily consumption of water in Brooklyn from 1897 to 1907.

Table No. 8. Showing average maximum and minimum daily consumption of water during 1906.

Table No. 9. Showing ratio of the average daily consumption for each month to that for the years from 1897 to 1907.

Table No. 10. Showing average depth and corresponding quantity of water in Ridgewood, Mt. Prospect, New Lots and Hempstead Storage Reservoirs.

Table No. 11. Showing the total monthly and average daily pumping at Ridgewood for the year 1906, rainfall for each month and proportion of the rainfall corresponding to the pumping.

Table No. 12. Showing the amount of water delivered at the Ridgewood Pumping Station from each source during 1906.

Table No. 13. Showing water mains laid and removed and gates and hydrants set and removed to December 31, 1906.

Table No. 14. Showing high pressure fire service mains laid and gates and hydrants set to December 31, 1906.

Table No. 15. Showing water mains laid and gates and hydrants set during the year 1906.

Table No. 16. Showing high pressure fire service mains laid and gates and hydrants set during the year 1906.

Table No. 17. Showing net amount of water filtered at the Baisley's and Springfield filter plants and at the Forest Stream and Hempstead filter beds, and cost of filtration per million gallons during 1906.

Table No. 18. Showing character of raw and filtered water at Baisley's and Springfield filter plants and at Forest Stream and Hempstead filter beds.

Table No. 19. Showing average quality of the water from the two Ridgewood reservoirs during 1905 and 1906.

Table No. 20. Showing average quality of the water from the tap at the laboratory from Flushing and Clermont avenues and from Flatbush avenue during 1905 and 1906.

Table No. 21. Showing results of tests of high pressure fire service mains during 1906.

Diagram No. 1. Showing contents of reservoirs, consumption, rainfall and temperature from 1897 to 1907.

Diagram No. 2. Showing the quality of the Brooklyn water supply, tap at Flatbush avenue.

Diagram No. 3. Showing the number of microscopic organisms before and after storage in the distribution reservoirs of the Brooklyn water supply, from 1897 to December, 1906.

#### Office Room.

By securing five additional rooms on the west side of the building, formerly occupied by the Sewer Bureau, we were enabled to provide somewhat more adequate room for the Assistant Engineers and the clerical staff, but the available space is still insufficient to properly and economically carry out the work of the Bureau, which is constantly increasing. Additional space, therefore, should be allotted to this Bureau.

#### Office Force.

The extraordinary amount of contract work being done by this Bureau, together with the regular routine work of the office, requires a much larger force than is at present employed to adequately supervise the work and properly keep the records of same, as well as to prepare contracts for the new work which is needed to improve and increase the supply and extend the distribution system. It is, therefore, imperative that an additional force be assigned to this Bureau if it is expected to properly plan and carry out the new work, as well as to look after the work on hand.

The present force of this Bureau have generally shown keen interest in performing their duties and unusual zeal in carrying forward the plans prepared by the Department. The compensation received by the members of the engineering corps is utterly inadequate to their services and responsibilities, and it is imperative that their compensation be increased if we are not to lose their services.

Yours respectfully,

J. W. McKAY, Acting Chief Engineer.

TABLE No. 19.

Showing Average Quality of the Water for the Years 1905 and 1906 from the Two Ridgewood Reservoirs.

	1905.	1906.
Physical Examination.		
Turbidity .....	4.	4.
Color .....	14.	12.
Per cent. of samples with distinct vegetable odors.....	0.0	0.2
Per cent. of samples with odors of decomposition.....	0.4	0.3
Per cent. of samples with odor due to organisms.....	0.0	0.0
Chemical Examination.		
Albuminoid ammonia.....	0.049	0.033
Free ammonia.....	0.021	0.021
Nitrites .....	0.003	0.003
Nitrates .....	1.06	1.48
Total solids.....	69.	81.
Chlorine .....	7.2	8.7
Hardness .....	26.	29.
Alkalinity .....	11.	15.
Iron .....	0.44	0.53
Microscopical Examination.		
Microscopic organisms .....	31.	51.
Amorphous matter .....	231.	280.
Bacteriological Examination.		
Bacteria per cc.....	363.	269.
Per Cent. of Positive Tests for B. Coli.		
In 0.1 cc.....	3.9	3.4
In 1.0 cc.....	17.6	12.4
In 10.0 cc.....	36.3	46.1

TABLE No. 20.

Showing Average Quality of the Water for the Years 1905 and 1906 from the Taps at the Laboratory, from Flushing and Clermont Avenues and from Flatbush Avenue.

	1905.	1906.
Physical Examination.		
Turbidity .....	4	4
Color .....	13	10
Per cent. of samples with distinct vegetable odors.....	0.1	0.3
Per cent. of samples with odors of decomposition.....	0.6	1.7
Per cent. of samples with odor due to organisms.....	0.7	2.6
Chemical Examination.		
Albuminoid ammonia .....	0.061	0.040
Free ammonia .....	0.012	0.007
Nitrites .....	0.003	0.003
Nitrates .....	1.01	1.48
Microscopical Examination.		
Microscopic organisms.....	1,329	520
Amorphous matter .....	234	219
Bacteriological Examination.		
Bacteria per c.c.....	321	186
Per Cent. of Positive Tests for B. Coli—		
In 0.1 c.c.....	2.2	1.7
In 1.0 c.c.....	10.0	6.6
In 10.0 c.c.....	27.6	32.7

Department of Water Supply, Gas and Electricity,  
Office of Supplies and Accounts, Municipal Building, Room 45,  
Brooklyn, February 27, 1907.

Hon. WILLIAM C. COZIER, Deputy Commissioner:

Dear Sir—I beg to transmit herewith for incorporation in report for 1906, the following statements:

- A. Amounts available and expenditures during 1906, and balances January 1, 1907.  
B. Distribution of expenditures on 1906 accounts.

Respectfully yours,

J. J. FLANNERY, Bookkeeper.

#### DEPARTMENT OF WATER SUPPLY, GAS AND ELECTRICITY.

##### BOROUGH OF BROOKLYN.

## BUREAU OF WATER RATES.

City of New York, Department of Water Supply, Gas and Electricity,  
Bureau of Water Rates,  
Brooklyn, January 2, 1907:

Hon. WILLIAM C. COZIER, Deputy Commissioner, Department of Water Supply, Gas and Electricity:

Dear Sir—I have the honor to report the collections of this Bureau for the year ending December 31, 1906, as \$2,042,102.82, an increase over the year 1905 of \$216,658.73. In addition to the foregoing, the collections of 1906 for water rents for previous years returned to the Department of Arrears for collection, as reported, amount to \$248,124.53, making a total collection of water rates for the Borough of Brooklyn for the past year of \$3,190,227.35, showing an increase over the previous year of \$252,677.48. Attached hereto I beg to submit statement showing receipts in detail, with amounts collected in 1905, for comparison.

The great activity in building in this borough accounts for the large increase in the receipts for regular rents during the year.

During the past year 1,890 water meters were set on permits issued from this office by consumers, an increase of 1,231 over meter settings for 1905. The total number of meters set and in use on December 31, 1906, is 8,806, an increase over December 31, 1905, of 1,724. Statement is attached showing in detail the pattern, size and number of meters set during the year.

The number of permits issued to repair meters during the year was 1,084. Two thousand three hundred (2,300) notices were sent to property owners to set meters, where conditions required, in compliance with the rules of the Department; 785 of these notices (about 34 per cent.) were complied with and meters set by owners, although the plumbers in this Borough were out on strike from July to October.

In addition to the permits issued to consumers for setting meters, 636 orders were sent to the Department Plumber to install meters on premises where owners failed to comply with the notices to set served upon them. These meters set on Department orders are not included in the detailed statement of new meters.

The meter ledgers in this Bureau have been changed from the old system of Ward divisions to the new system of section divisions, from sections I to II, during the year.

Your attention is again called to the inadequate office space allotted to the Department, the desk room being so contracted that only a small portion of the books can be opened at a time; this causes serious loss of time during the rush season, when issuing bills to consumers on personal application, as a large percentage of the rate bills are issued.

I would also respectfully renew my request for the appointment of more Clerks. Since January 1, 1904, the clerical force has been reduced by eight, due to losses by death, resignation and transfer. Three Clerks have been transferred to this office during the interim, making a net loss of five Clerks, while the necessary work of the office is increasing every year.

The storage room for old records of the Bureau is also much too small, books and records being stacked over all the available floor space, making it necessary, in the examination of these old records, to take down and replace many books, a needless waste of time and labor.

Application has been made to the Bureau of Public Buildings and Offices for the addition to this office of the rooms now occupied by the Department of Arrears, which I understand is to remove to new quarters in the near future. This additional office space will facilitate the work of this office, as it will give us sufficient desk room, a large vault on the main floor for storing the cash books and records, double the storage space in the basement and give a direct entrance to the storage room from the main office instead of as at present from a public hall and not connected with the office.

Should this additional space be assigned to this Bureau, I would respectfully recommend that the issuing of permits for taps and connections and building purposes, as well as the initial inspection of meter settings, be transferred to this Department from the Engineer's Bureau.

Recommendation is respectfully made that the Borough be divided into inspection districts, as per my letter to Commissioner Ellison under date of March 19, 1906, and the placing of a competent Inspector in charge of each district, holding him personally responsible for the proper charge for water rents, the detection of leaks and waste of water, as the inspection could in this way be made thorough and practically continuous. Should such additional inspection districts be approved, I would suggest the appointment of plumbers as Inspectors, who could, on the failure of owners to stop leaks, etc., after notification by the Department, make the necessary minor repairs, the expense of which could be charged on the books of this office against the property.

Your attention is respectfully called to the fact that it has been impossible to seal the meters set prior to my incumbency, in accordance with the order from the Commissioner, as the force of Inspectors has been so reduced by the detailing of twenty (20) of our men for duty in the office of the Water Register in Manhattan. Seals, etc., however, have been prepared ready for use.

In February last twenty-two Inspectors from this office were detailed by order of Commissioner Ellison for duty in Manhattan; from time to time seven of these have been returned to Brooklyn, but fifteen are still in New York. The salaries of these Inspectors, during their service in Manhattan, up to December 31, 1906, amount as follows:

From salaries, office of Water Registrar.....	\$5,245 66
From water revenue, office of Water Registrar.....	10,182 27
<b>Total.....</b>	<b>\$15,427 93</b>

—all of which has been paid from the appropriation for this Bureau.

The loss of the services of these Inspectors hereinbefore referred to has seriously handicapped the work of this Bureau, as it has been impossible with the force of Inspectors available to properly inspect the Borough for new buildings and alterations.

Respectfully,

WM. R. McGUIRE, Water Registrar.

Brooklyn, January 22, 1907.

Hon. WILLIAM C. COZIER, Deputy Commissioner, Department of Water Supply, Gas and Electricity, Borough of Brooklyn:

Dear Sir—In presenting herewith the annual schedule of operations of the Bureau of Electricity and Gas, I beg to submit the following report for the year 1906:

##### Testing of Gas.

Our Bureau has been relieved of the duty of testing illuminating gas, which responsibility has been assumed by the Chief Engineer of Light and Power.

##### Electric Meters.

Under an agreement which exists between The City of New York and Columbia University the laboratory of the latter and its experts are employed for testing such electric meters as form the subject of complaint. The new method of dealing with these complaints bids fair to prove very successful. It conduces to greater accuracy and is more convenient.

##### Interior Conductors.

This Bureau is charged with the duty of inspecting all electrical appliances or wiring introduced into buildings in this Borough; the reinspection of old electric equipments and the investigation of all fires whose origin might be attributable to electricity. For this purpose we have a force of nine (9) inspectors—a sufficient number to care fairly well for the new work. We operate under rules promulgated by the Commissioner and based generally upon the National Electric Code.

In addition to the purely routine work special Monday inspections are made of electrical features used on the stages of our various theatres.

Last spring I submitted for consideration the question of establishing in the Fire Department a special theatre squad, to be trained in the electrical rules and regulations of our department, and to act in lieu of our own inspectors in matters relating to temporary stage electric lighting. A fireman is in attendance at each performance, whereas it is possible for our inspector to visit each theatre only once a week.

For several years past I have advocated that "a systematic canvass and resurvey of all old electric equipments in the borough should be undertaken at once, and should become a permanent feature of our work, the routine being so arranged that each equipment might come under our observation once every two or three years. This would require an increase in our inspection force, but it is fully as important to see that electrical appliances and wiring are properly maintained as to supervise their correct installation. Increasing vigilance must be exerted as equipments grow older—and some of them are now eighteen or twenty years old."

Owing to the somewhat laborious method of procedure laid down by the Charter for securing compliance with our requirements we have preferred to deal with dangerous electrical installations through the operating companies or the fire marshal. In case a defective installation is connected to the mains of a public service corporation we serve peremptory orders on the corporation to discontinue service. Where the installation is independent and supplied from its own generating plant the aid of the fire marshal is invoked successfully.

One of the most important instances in which the correction of electrical defects was forced is to be found in a large factory employing several thousand persons, the majority of whom are women. This contained a private plant, and the wiring and appliances could hardly have been in worse condition. Repeated notices to the owners brought no results; but our representation of the case to the fire marshal secured within thirty-six hours a promise from the owners to overhaul the plant at once, and within four days four wiremen were at work making the alterations directed by this Department.

In nearly all of these inspections we are duplicating the work of the Fire Underwriters, for whose inspections a fee is charged. This condition imposes a double tax and a double nuisance upon the householder, and it is hoped that the day may come when a single inspection—one by the City—will be sufficient. To that end we are endeavoring to make our inspections more able, more conscientious and more uniform, so that at least they may command the entire confidence of the Fire Underwriters.

The time of one inspector is given to overhead lines.

##### Overhead Wires.

Year after year I have had to report that "Brooklyn is cursed with an immense mass of overhead conductors of all classes interwoven in all kinds of shapes. This is the outgrowth of years of construction—much of it without proper official supervision—and we are endeavoring continually to bring about better conditions, either through the burial of wires or through the rearrangement of pole lines."

"A large field of usefulness awaits here in Brooklyn the advent of a pole chopping gang similar to the one that made electrical history for old New York some twenty years ago."

It has been found to be utterly impracticable to secure results of any importance in the removal of poles and wires from our highways, owing to the fact that the fire and police telegraph lines are constructed and maintained by their respective departments. Under the present Charter three large city departments must work in absolute harmony in this matter of poles and wires, which is one of secondary interest to two of the departments.

Our records show that after seven years of effort, under varying administrations, the proper degree of harmony cannot be attained; and I am very firmly convinced that the construction and maintenance of all outside fire and police signal lines should be placed in charge of the Department of Water Supply, Gas and Electricity. The ridiculously poor showing which this Department is making from year to year in the matter of removing or reconstructing pole lines is due, not to the public service corporations, not to lack of interest or energy on the part of this Department, but solely to the City itself as represented by the Fire and Police Departments.

##### Pole Lines.

Many years must elapse before poles carrying electrical wires cease to exist in the Borough. At best these poles are unsightly obstructions and tend to impair the value of abutting property. This is particularly true of those poles owned by the City, which are never painted and compare unfavorably with the poles of the public service corporations. It has been found to be impossible to secure the construction of pole lines under private ownership, with a view to the future and general needs of the district instead of to the immediate and special needs of the corporation undertaking the construction. At present several poles of different ownership must be allowed, where, under public ownership, one pole might be made to serve.

##### Subways.

Our present method of dealing with the electrical subway situation seems not to be giving the best possible results. In Manhattan and the Bronx, where public subway companies exist, it is reported that these companies are controlled by the public service corporations. In Brooklyn, Queens and Richmond, where each corporation is allowed to construct its own subway, there is more or less of a scramble to secure a choice location in already congested streets. All this operates to waste the space beneath our highways, to increase the number of street openings and to retard extensions in those cases where an immediate return on the investment cannot be anticipated.

##### Third Rail.

After seven years' careful attention to the performance of the exposed third rail used on the elevated roads of the Borough, it has been decided that the comparatively

small element of danger which it introduces is not of sufficient importance to warrant, at present, the entire reconstruction of the rail and contact shoes and the partial rebuilding of the structure, which would be necessary if proper rail protection were to be provided.

#### Subsurface Construction Maps.

The Bureau having charge of the issuing of gas, steam, pneumatic and electric permits should have adequate authority and funds for preparing accurate maps of subsurface construction. At present the Borough President, who cannot initiate a single permit for any one of these purposes, is attempting to carry out the scheme of mapping undertaken by this Department three years ago.

I have prepared several special reports on the subject of these maps, and have exhibited the maps themselves in various official quarters; but it seems utterly impossible to enlist the active interest of those who have power to inaugurate the scheme in a comprehensive manner, notwithstanding the fact that the plan, which I have borrowed largely from Philadelphia, promises beyond question to be not only self-supporting within a year or two, but a source of revenue.

#### Electrolysis.

During this year this Bureau has not been called upon to make any investigation of the corrosion of underground metals, nor have we initiated any such investigation, owing to the fact that the entire redistribution of the feeding system of the Brooklyn Rapid Transit Company was in progress, together with the entire reconstruction of their track and return system.

#### The Electric Code.

It is very important that the electrical rules and regulations of this Department should be embodied in an electrical code of The City of New York. Such a codification had been progressing under the supervision of our Consulting Electrical Engineer, when, last year, the revision of the National Electric Code was considered seriously. Much as we need an electrical ordinance, it would apparently be unwise to secure the adoption of one prior to the presentation of a report by the National Electric Code Revision Committee.

#### Licensing Electricians.

I beg to repeat here my annual recommendation in regard to licensing:

"There are some electrical workers and contractors, I regret to say, who, either through intent or ignorance, vitiate to some extent the good accomplished by our inspection. Many of these persons may be brought into line through the operations of the proposed Electric Code. However, the penalty attached to the code would be no assurance against incompetency; nor would it prove a bar to rascality in cases where payment of a non-cumulative fine would be cheaper than compliance with our requirements. The system of licensing would tend to weed out the ignorant and deter the vicious. I earnestly urge the adoption of such a system, applied either to the contractor or to the worker, or to both, as may be deemed expedient."

#### Municipal Ownership.

Reverting to those portions of my report treating of subways and pole lines, I beg to say that I can see no relief save in municipal ownership of subways and poles

from the present intolerable conditions. Under municipal ownership it would be possible to reconstruct or remove the present pole lines and subways, or to make extensions of the same according to a comprehensive plan under which more regard would be given to the needs of the public and less to the financial convenience of the individual corporations.

#### The Office.

The addition of two Clerks to our office force has enabled us to keep fairly well abreast of the current work. Our quarters, however, are still ridiculously inadequate—not to say scandalous—and were it not for the fact that we are able to store many of our records in two large cases in the public corridor it would be impossible to carry on our work with even an approach to reasonable dispatch.

The total number of applications for permits and certificates during 1906 is 29,898. This means an increase all along the line amounting to 44 per cent. Analysis gives the following percentages of increase:

For overhead permits, per cent.....	47
For subway permits, per cent.....	83
For subway subsidiary permits, per cent.....	27
For underground conductor permits, per cent.....	66
For certificates of interior wiring, per cent.....	37

The total number of inspections made during the year was 37,057, representing an increase of 34 per cent. over the previous year. On the other hand, the number of complaints is 1,885, or 9 per cent. less than a year ago. This seems to show a very decided improvement in the electrical conditions throughout the Borough.

It is interesting to note that the percentage of increase in subway permits is very much in excess of that of pole and overhead wire permits, viz., 83 per cent. against 47 per cent. These figures indicate progress in the right direction.

Permit me to call attention to the creditable work of my subordinates.

#### Recommendations.

To recapitulate then, I beg to invite your attention to the following recommendations:

1. An increase in the force of Inspectors to care for resurveys of electrical installations.
2. The placing of the outside lines of the fire and police telegraph systems in the hands of this Department.
3. The municipal ownership of poles and subways.
4. The proper inauguration of a comprehensive system of subsurface maps.
5. The adoption of an electric code in the near future.
6. The licensing of electricians.
7. The providing of suitable quarters for this Bureau.

Respectfully,

H. S. WYNKOOP, Electrical Engineer.

## BUREAU OF WATER REGISTER.

BOROUGH OF MANHATTAN.  
Department of Water Supply, Gas and Electricity,  
Bureau of Water Register,  
New York, January 17, 1907.

Hon. JOHN H. O'BRIEN, Commissioner of Water Supply, Gas and Electricity:

Sir—I have the honor to submit herewith a detailed statement of the receipts of this Bureau for the year ending December 31, 1906, and respectfully beg to call your attention to the following facts:

The receipts for the year are \$5,909,327.88, being the largest in the history of the Department. They constitute a total increase of \$554,572.66, over the receipts of the year 1905.

In the Regular Rate Branch there is an increase of \$136,828.91.

In the Meter Branch there is an increase of \$396,383.70.

The receipts for extras, viz., boilers, concrete, and wetting down buildings, show an increase of \$15,618.06, a gain of 446 per cent.

The receipts for water supplied to tugs, etc., show an increase of \$16,457.29.

During the year there were 8,507 new meters installed; nearly four times as many as during the year 1905.

The general reinspection of buildings will be continued as rapidly as possible until every unmetered building has been examined, and meters placed in all buildings requiring same, as provided for by section 475 of the Greater New York Charter.

Particular attention has been given to the subject of waste, and all complaints relating thereto have been promptly investigated and acted upon.

The issuance from this Borough of all permits for water to be supplied to shipping in the entire City, has proved a great success, has increased the revenue and facilitated the collection thereof, with less cost to the City.

When the patrol boat for which the Board of Aldermen recently made an appropriation, has been placed in commission, the revenue derived from this source will be greatly increased.

I feel confident that with an increased force and additional office room, a greater increase in revenue will result for the ensuing year.

Respectfully,

M. C. PADDEN, Water Register.

## BUREAU OF WATER REGISTER.

Department of Water Supply, Gas and Electricity,  
Bureau of Water Register, Borough of Manhattan,  
New York, January 17, 1907.

Hon. JOHN H. O'BRIEN, Commissioner of Water Supply, Gas and Electricity:

Sir—I have the honor to submit a statement of moneys received in this Bureau for the year ending December 31, 1906, and placed to the credit of the respective accounts with the City Chamberlain, together with the accounts returned to the Bureau of Arrears:

## Regular Rates.

	Penalties.	Principal.	Total.

Total.....					\$9,581 00	\$3,227 22		\$707,571 59
For taps.....								9,581 00
For M. S.....								3,227 22
Full total.....								\$720,379 81

Respectfully submitted,

(Signed) THOMAS M. LYNCH, Water Register.

## V.

Department of Water Supply, Gas and Electricity,  
Borough of Queens,  
Long Island City, January 9, 1907.

JOHN H. O'BRIEN, Esq., Commissioner, Nos. 13 to 21 Park Row, New York City:

Dear Sir—The following is statement of water rents and charges collected and deposited during the year ending December 31, 1906:

Annual frontage and extra rates.....	\$61,562 79
Penalties on deferred payments of annual rates.....	1,417 25
Meter rates for water supplied to buildings.....	123,265 23
Charges for water supplied for building purposes.....	5,008 02
Charges for water supplied for miscellaneous purposes.....	499 25
Charges for permits to tap mains.....	3,094 00

Total receipts for the year..... \$194,846 54

Arrears—Amounts returned to Bureau of Arrears..... 26,082 09

Total revenue for the year..... \$220,928 63

Increase in revenue over the year 1905..... \$31,713 18

Yours very respectfully,

CHARLES C. WISSEL,  
Deputy Commissioner, Queens,

Department of Water Supply, Gas and Electricity,  
Borough of Queens,  
Long Island City, January 21, 1907.

Hon. JOHN H. O'BRIEN, Commissioner of Water Supply, Gas and Electricity, Nos.  
13 to 21 Park Row, New York City:

Dear Sir—I herewith forward to you report of electrical transactions with duplicate  
for the year 1906.

Yours very respectfully,

CHARLES C. WISSEL,  
Deputy Commissioner, Queens.

Department of Water Supply, Gas and Electricity,  
Borough of Queens,  
Long Island City, January 21, 1907.

Hon. CHARLES C. WISSEL, Deputy Commissioner, Queens, Long Island City,  
N. Y.:

Dear Sir—I herewith submit to you report of the Electrical Bureau, Borough of  
Queens, for the year 1906, together with comparison sheets for the years 1904, 1905 and  
1906, and in connection with same beg to call attention to the following facts:

First—That the increase of 1906 is about equal to the total of 1904.

Second—That the first three quarters of 1906 exceed the total of 1905.

Third—That this mass of business has been transacted by the Bureau with no  
increase of force since 1901.

Fourth—That there were no subways prior to 1898. Since then there have been  
constructed as follows:

Trench, feet	213,264
Duct, feet	1,589,085
Cable, feet	413,649.4
Conductors, miles	21,776.07
Trench, miles	40.39
Duct, miles	300.96
Cable, miles	81.75

Fifth—That the increase of business necessitates an increased force of Inspectors,  
as the present force cannot cover the territory and handle satisfactorily the business  
of the Bureau.

The Bureau repeatedly receives complaints that enough inspections cannot be had  
on work under construction, thus delaying the work and causing loss of time and money  
to the owners and tenants of buildings.

Respectfully yours,

J. H. BURKE, Chief Inspector.

The following is a summary of electrical transactions of the Borough of Queens  
for the years 1904, 1905 and 1906, showing increase.

#### Permits Granted for Exterior Work.

	1904.	1905.	1906.
For telephone and signal	1,033	2,334	3,507
For electric light and power	801	1,011	1,742
Total	1,834	3,345	5,249

#### Applications Received and Certificates Granted for Interior Work.

	1904.	1905.	1906.
Applications received	1,102	1,257	2,164

## BUREAU OF LAMPS AND LIGHTING.

Department of Water Supply, Gas and Electricity,  
Bureau of Lamps and Lighting, Nos. 13 to 21 Park Row,  
New York, December 30, 1907.

Hon. JOHN H. O'BRIEN, Commissioner:

Dear Sir—I transmit herewith the annual report for the year 1906, drawn on somewhat different lines from the past, which were designed by this Bureau to meet the varied requests for information made on it. These tabulated reports give the detailed engineering and financial statements necessary to a complete understanding of the light and power service in kind and amount in the Boroughs of Manhattan and The Bronx, Borough of Brooklyn, Borough of Queens and the Borough of Richmond.

This report can properly be called a preliminary or interim report. The last annual report made was for the year 1904. The period covering the years 1903, 1904, 1905 and 1906, is the period during which the lighting agitation took place on the question of the rates charged to the City, the City claiming these rates were excessive, and the companies refusing to reduce same.

It is intended, as soon as the accounts can be finally checked for the year 1905, which is still outstanding, to make a complete and comprehensive report covering the whole four years and giving the history of the entire controversy, including the results of the investigations, the laws passed by the Legislature, the result of the contested cases in court, and finally a statement showing the complete effect on the cost of lighting to The City of New York, including compromise settlements, so far as it is possible to show it. Such a report will, in my opinion, be a most valuable

record for this Department, and absolute proof that these lighting controversies have been carefully and conscientiously conducted by those concerned for the benefit of The City of New York only, and so far as was possible in a spirit of fairness to all parties concerned.

In order to do this, the reports of 1903 and 1904 must be revised as soon as the conflicting accounts are settled. Until settlements now in dispute are effected or final decisions in court given on contested cases, no man can state accurately, now, the result on the financial showing of these years. A report on settlements made in 1906 is appended.

The year 1905 is even further complicated than 1903 and 1904 on account of the fact that it was during this year the legislative inquiry took place and the Legislature, on the report of the investigating committee, passed what are known as the "Lighting Laws of 1905," which have held to date, with one or two amendments.

The Consolidated Gas Company objected to these laws where they affected them, on the ground that they were unconstitutional, because confiscatory. This matter is still before the courts, and the City has good ground to be hopeful of a favorable decision before the United States Supreme Court, to which body the case will be appealed. But during 1905, the lighting for the first half of the year was charged to the City at the rates which the City states are excessive. During the last half of the year, it is charged in a number of instances at the rates set by the Legislature. A number of the companies, however, pending a decision of the suits, particularly the gas companies, have not put in any bills at all.

This Department has carefully kept, however, the consumptions for the Boroughs of Manhattan and The Bronx at any rate, and will be able to check these bills exactly when they ultimately are received. At what rate the court will finally settle on, it is now impossible to say, and it is impossible for this Department to make a report which will comply with the law which states that we should do so.

Up to February 1, 1906, the City and the companies have not been able to agree upon the prices, and no contracts for the lighting during these years were made. The only contracts governing during these periods were old, long term contracts made prior to the beginning of the controversy.

Towards the end of 1905, the writer, who was then Engineer of Surface Construction in the Boroughs of Manhattan and The Bronx, was made Chief Engineer of Light and Power of the five Boroughs.

Under the protection of the legislative rates, an attempt was made to again re-new contract relations with the companies, and a very careful revision of the contract forms and specifications was made in connection with the Corporation Counsel's office, and bids were finally advertised to be opened February 1, 1906. When these bids were opened they were found to be, in some cases, considerably below the statutory price, and it will be noted in the accompanying statements that the month of January is, in a number of cases, at a higher rate than for the balance of the year.

Bids had also been called for consolidating the total number of arc lamps supplied by the various companies in the Boroughs of Manhattan and The Bronx, so that a bid could be obtained on the total number, instead of on the separate numbers of lights in each company's territory.

In considering the bids after opening them, a further careful and exhaustive investigation was made in connection with the Corporation Counsel's office, and the recommendations made by the Chief Engineer of Light and Power were carefully reviewed and confirmed by a Board of Advisory Engineers, which the Corporation Counsel had engaged to assist in trying the Consolidated Gas Company's cases. After approval by the Commissioner of this Department and the approval of the Corporation Counsel acting on the report of his Board of Engineers, the Commissioner of this Department submitted the entire matter to the Mayor of the City, the Hon. George B. McClellan. The recommendations of the Commissioner and the Corporation Counsel received the Mayor's approval, and after this the contracts were taken up for execution. In many instances, on the combined report of the Engineers, concessions were received below the bid prices, and contracts were finally made on the basis as shown in the tabulated reports attached. An abstract of the bids received is also given.

On March 14, the Chief Engineer of Light and Power was formally put in charge of the lighting of the other Boroughs. Prior to this time he had been acting merely in an advisory capacity. Immediate steps were taken towards the improvement of lighting conditions in the other Boroughs, to conform to those that had been previously made in the Boroughs of Manhattan and The Bronx, and during September and October a change was made from open flame to mantle lamps in the Boroughs of Brooklyn and Queens, both as to gas and naphtha. Earlier in the year the open flame gas and naphtha lamps in the Boroughs of Manhattan and The Bronx had also been changed. So that before the end of 1906, practically all open flame lamps had ceased to be used in the lighting of The City of New York.

The marked improvement in the lighting was highly appreciated and more than justifies the comparatively slight additional expense. The old open flame lamp gave from twelve to sixteen candle power, depending on the amount of gas consumed. The new lamps give uniformly at least fifty candle power on the street. The light in candle power therefore was increased over 300 per cent. The cost of the mantle lamps over the open flame lamps was not more than 40 per cent.

Certain rearrangements in lighting were made in consequence, and the conditions generally improved. The old gas lamps in many cases were antiquated, out of repair and little care was taken as to their maintenance. The improvement in the maintenance of the mantle lamps over the open flame is most marked, and is a matter of pride both to the City and the companies.

In making the statement that the open flame lamps have disappeared from the lighting of The City of New York since the fall of 1906, an exception should be made in regard to the territory of the Kings County Lighting Company, in the Thirtieth Ward of the Borough of Brooklyn. An old contract existed with this company, which provided only for service by open flame gas lamps, prevented any change of location, and made the situation practically impossible to improve. The rate charged for these lamps, twenty-eight dollars (\$28) per lamp per year, was deemed so high at this time for the service rendered, that the then Commissioner wisely decided to order no more of these lamps. This contract had been attacked once or twice by the City, but it had been unable to legally break same.

It was found in this contract that the use of mantle naphtha lamps was not excepted, and after advice of the Corporation Counsel, this Department started to order these lamps put in place, instead of ordering lamps from the Kings County Company. After this the company endeavored to negotiate with the City in order to obtain this business. These negotiations at the end of 1906, while promising, were going along slowly. It was the definite idea on the City's part that some improvement must be made, if there was any possible way of obtaining it. The company appeared at this time to begin to think that possibly it would be much better to consider a policy of improvement, than to assume the attitude it had previously, of refusing to make any change in the provisions of the contract, no matter how unreasonable and galling these conditions might be.

In describing the improvements in the Boroughs of Manhattan and The Bronx, Brooklyn and Queens, we regret that it is impossible to report similar improvement in the Borough of Richmond. During the months of June and July, the electric lighting plant furnishing the lighting on Staten Island broke down, apparently from long neglect. Both the lighting and the transportation service greatly suffered, the repairs necessary to the plant were so large that there was no chance of their being finished during the year 1906, and it was not until late in the fall that the service began to get back to anything near normal.

The Chief Engineer of Light and Power made a number of visits to the island and endeavored, so far as possible, to lend the aid of his experience to the company, in order to obtain what lighting he could. It was impossible for them at the time, for a considerable period, to carry all the lighting they had contracted for, and it was necessary for the Chief Engineer to choose and direct which lighting should be maintained and which left unlighted. A complete report of this matter was made to the Commissioner, and also to the Comptroller of The City of New York. Little improvement, however, can be hoped for until the succeeding year.

## LIGHTING AND POWER IN PUBLIC BUILDINGS.

During the year also a strong effort was made to properly control and improve the lighting in public buildings throughout the City, and the new methods of checking, tabulating and supervising this lighting were put in force in all Boroughs and have so far produced good results.

I trust that this arrangement may continue, as the work is increasing and may develop into a subject of considerably larger magnitude.

Department of Water Supply, Gas and Electricity,  
 Bureau of Lamps and Gas,  
 Office of Chief Gas Examiner, No. 122 Bowery,  
 New York, January 15, 1907.

Mr. C. F. LACOMBE, Chief Engineer of Light and Power:

Dear Sir—I submit herewith a report on the work at the photometric stations of the Department for the year 1906.

At present there are eight stations in operation, the location of which together with the date of opening and the gas supplies tested in each are as follows:

Station.	Location.	Opened.	Cases Tested.
Grand Street.....	Corner Grand street and the Bowery...	1877.	Consolidated, Branches 1 and 2, New York Mutual.
Seventy-ninth Street..	Seventy-ninth street, between Second and Third avenues....	1877.	Consolidated, Branches 3, 4 and 6, New Amsterdam, Standard.
Lee Avenue.....	Lee avenue and Rodney street, Brooklyn	Feb. 19, 1906	Brooklyn Union, Nassau and Williamsburg branches.
Court Street.....	Court street and Atlantic avenue, Brooklyn	Mar. 27, 1906	Brooklyn Union, Fulton and Citizens' branches.
Sixth Avenue.....	Sixth avenue, near Union street, Brooklyn	April 9, 1906	Brooklyn Union, Metropolitan branch.
New Utrecht.....	New Utrecht avenue, near Sixtieth street, Brooklyn	Aug. 6, 1906	Kings County Lighting.
Richmond.....	No. 407 Richmond terrace, New Brighton	April 20, 1906	New York and Richmond.
Rockaway.....	No. 6 North Fairview avenue, Rockaway Beach	Oct. 22, 1906	Queens Borough Gas and Electric.

At the eight stations already in operation there are sixteen separate gas supplies being tested daily. In 1907 it is proposed to establish four more stations for testing the remaining four gases supplied in Greater New York.

As required by the Charter the results of the daily tests made at the several stations have been transmitted to the Department.

The following tables contain a summary of these results, giving the averages for each quarter, together with the yearly average.

Very truly yours,  
 E. G. LOVE, Chief Gas Examiner.

## SETTLEMENTS MADE DURING 1906.

Report Showing Results for Gain in Settlements Made by the City With Various Lighting Companies, Based Upon Adjustments Approved by the Comptroller and the Commissioner of Water Supply, Gas and Electricity, Acting Under the Approval of the Corporation Counsel of the Law Department.

Settlements of Accounts from January 1, 1903, to January 31, 1906.

New York and New Jersey Globe Gas Light Company (Naphtha Lamps)—The basis of settlement with the New York and New Jersey Globe Gas Light Company for lighting public streets throughout the City, consists of an agreement by which the company is to receive \$1.74 per lamp per month, or \$20.88 per year throughout all Boroughs, with no charge for interest. The bid price billed for the corresponding periods and Boroughs was \$22 per lamp per year. The saving to the City on the basis of this adjustment is summarized as follows:

Original bills on bid prices.....	\$118,515 62
Bills rendered as per adjustment.....	110,978 80

Net gain to the City.....	\$7,536 82
---------------------------	------------

Welsbach Street Lighting Company of America (Naphtha Mantle Lamps)—The basis of adjustment with this company was \$2.27 per lamp per month, or \$27.24 per year, without interest, against \$30 per lamp per year on the basis of the bid prices. The saving to the City on the basis of this adjustment is summarized as follows:

Original bills on bid prices.....	\$146,969 70
Bills rendered as per adjustment.....	135,399 27

Net gain to the City.....	\$11,570 43
---------------------------	-------------

New York and Queens Electric Light and Power Company—The basis of adjustment with this company consists, for the most part, in a reduction of the prices for street arc lighting, and is as follows:

For the years 1903, 1904, and from January 1, 1905, to June 30, 1905, the price agreed upon for arc lighting was \$107.50 per lamp per year. For the period from July 1, 1905, to January 31, 1906, the price agreed upon for arc lighting was \$96.00 per lamp per year.

It was also agreed upon that the City pay to the said company interest on all balances due the company on all lighting bills from January 1, 1903, to the date of settlement by the Department of Finance. This carried with it interest charges on balance of bills for all street lighting, including the "Woodhaven District" contract (the terms of which were \$97.50 per lamp per year for arc lighting), which expired on January 31, 1906, Public Buildings and Power.

The following will show the gain to the City from two points of view. Interest charges are calculated on the adjusted bills and also on the original bills rendered, and are as follows:

First, on Basis of Actual Settlement—

Total original bills, including Woodhaven.....	\$769,260 81
Payment made in full adjustment, not including interest.....	692,116 04

First, on Basis of Actual Settlement—

Gain to the City on basis of adjustment of prices, not including interest.....	\$77,144 77
Interest charges on adjusted and contract bills.....	44,904 60
Total net gain to City on above basis.....	\$32,240 17

Second, on Basis of Payment of Interest on Original Bills Rendered—

Gain to the City on the basis of adjustment without interest.....	\$77,144 77
Interest charges on original bills.....	\$56,865 31
Interest on adjusted bills.....	44,904 60
Net gain on interest charges.....	11,960 71
Total net gain on above basis.....	\$89,105 48

Resume, Showing Gains to the City on the Basis of Above Settlements.

New York and New Jersey Globe Gas Light Company, gain.....	\$7,536 82	\$7,536 82
Welsbach Street Lighting Company of America, gain....	11,570 43	11,570 43
New York and Queens Electric Lighting and Power Company, first basis.....	32,240 17	.....
New York and Queens Electric Lighting and Power Company, second basis.....	.....	89,105 48
	\$51,347 42	\$108,212 73

Respectfully submitted,  
H. R. EMERSON,  
Auditor, Bureau of Lamps and Lighting.

b Deduct difference.....								
					189 35			189 35
Total.....					\$4,980 35			\$11,139 90

a January Gas and Maintenance was certified at \$29.00 on 50 per cent. basis on \$1,011.79, and \$505.90 paid by Department of Finance.

b The amount for January, at \$23.57, would be \$822.44, or a difference of \$189.35, to be adjusted in final settlement.

c Rental of service and standpipe discontinued in 1907.

d Gas, \$10.37 per annum; 22 candle-power gas, 3,950 hours. Maintenance, \$13.20.

e Gas and Maintenance.

All equipment and lamp-posts supplied and erected by company.

December 31, 1906.

Mr. CHARLES F. LACOMBE, Chief Engineer of Light and Power, Nos. 13 to 21 Park Row, New York:

Dear Sir—I herewith submit a report of changes in public lighting, etc., in the Boroughs of Manhattan and The Bronx, during the year 1906, with a few remarks regarding work done in the Boroughs of Brooklyn and Queens, by employees of this Bureau, under my direction.

All the open flame gas lamps except two in ornamental lanterns on the building of the Society for the Prevention of Cruelty to Animals, in the Borough of Brooklyn,

were changed to Welsbach mantle lamps, the actual work of changing the equipment being done between August 20 and October 18, during one week of which time the work was stopped, owing to a delayed shipment of glass.

On September 26, one of the Brooklyn gangs was transferred to the Borough of Queens, and beginning at Richmond Hill, proceeded to change the open flame gas and naphtha lamps to mantle lamps. The second gang was also transferred to Queens after completing the work in Brooklyn, and on October 30 practically all the gas street lamps in the Greater City, excepting those in the Thirtieth Ward of Brooklyn, which are maintained by the Kings County Lighting Company under an old contract, and practically all the naphtha lamps in the Boroughs of Manhattan, Brooklyn and Queens were of the Welsbach mantle type; the open flame naphtha lamps in Manhattan having been changed to mantle lamps in August. During November, the open flame naphtha lamps in the Borough of The Bronx were also changed to mantle lamps. The few remaining open flame gas lamps which are principally fire alarm and police signal lamps in Manhattan and The Bronx, will be changed to mantle lamps as far as possible in the early part of next year. This work was delayed on account of the general change in Brooklyn and Queens. It will be some time before the fire alarm lamps in The Bronx can be equipped with mantle burners, as several styles of lettering will be required on the glass, and it will take several months to make the necessary provisions and secure the glass.

We are also at work compiling new maps of the Boroughs of Brooklyn and Queens showing the location, kind and style of each lamp.

Next to the equipment of gas and naphtha lamps with mantle burners, the most important change in the lighting system was the installation of electric arc lamps in place of mantle gas lamps, on all the streets in the section lying between East Broadway and East River, from Dover street to Grand street. Aside from increasing the street lighting in the most densely populated section of the City, this change was desirable and necessary owing to the fact that the ground in this section is very low and quite distant from the gas holder supplying it. The supply of gas was quite unsatisfactory, and it was hoped that the discontinuance of the gas street lamps would offer some relief.

It is also proposed to continue to replace the existing mantle gas lamps with electric arc lamps through the section lying east of the Bowery as far north as Houston street. This will probably be done next year.

A large number of lamps were relocated on various streets, greatly improving the lighting conditions at little or no additional cost, and a large number of old style partly wooden electric light poles have been replaced with the "bishop's crook" iron posts, which present a much handsomer appearance. The lighting on Blackwells Island was improved by the installation of nineteen new mantle naphtha lamps, and plans were completed in the early part of the year for lighting the roads on Randalls Island, but the installation has been delayed on account of the wiring of the buildings, etc. Plans were also completed for the lighting of the Riverside Drive extension and Park, Seventh avenue (boulevard), from One Hundred and Tenth street to Harlem River, and Marginal street, from Bloomfield street to Twenty-third street (account Dock Department, Chelsea Improvement), so that we are ready to go ahead as soon as the conditions will permit the installation of the lamps.

Twin arc lamps (450 watts per lamp) were installed on two poles in the public squares formed by the junction of Broadway and Fifth avenue, at Twenty-third to Twenty-fifth street, greatly improving the lighting at this point. Improvement was also made in the lighting of Bryant Park and around Union Square Park, special fixtures being erected on the terminal posts of the esplanade railing on the north side of Union Square Park. The arc lamps in several parks will be relocated to secure better results and placed on underground service during the coming year.

The Old Ship Canal bridge has been moved down the Harlem River, and will connect the Borough of Manhattan at Two Hundred and Seventh street with the Borough of The Bronx in the vicinity of One Hundred and Eighty-fourth street. This bridge will probably be opened for traffic in the late summer, and is to be lighted by electric arc lamps, current to draw span being supplied from each side of the river.

The draw span of the present bridge connecting Madison avenue (Manhattan) with One Hundred and Thirty-eighth street (The Bronx) is to be moved south to a point between One Hundred and Thirty-sixth and One Hundred and Thirty-seventh streets, and will be lighted with its present equipment of open flame gas lamps. The approaches are to be provided with electric arc lamps, some of which are already in place. This bridge is only to do temporary service during the construction of a new bridge on the site of the present one.

The new double deck bridge over the Ship Canal at Broadway is to be lighted at first by two systems, public arc lamps on the north approach, and incandescent clusters on the draw and south approach, the latter to be provided and maintained by the Interborough Street Railroad Company, until we are able to continue our arc lighting system to this point and replace the incandescent clusters with electric arc lamps.

For some time past we have been endeavoring to perfect an adjustable mast-arm pole for use on boulevards and avenues lined with trees, where satisfactory results cannot be obtained with the styles of posts now in use. We have finally secured a design which it is believed will give satisfaction, and we hope to be able to install some of the new posts next year. Should the proposed post come up to expectations it will work a great improvement in the system of lighting, besides adding to the appearance of the streets. The credit of this is due largely to the cooperation of the New York Edison Company.

We were only able to install a comparatively few gas lamps in The Bronx during the year, owing to the fact that as we were without contracts for supply of gas, the gas companies did not extend their mains through streets where we desired to place gas lamps. We will undoubtedly have the same trouble during the year 1907, and may have to install electric and naphtha lamps where gas lamps would be more desirable, for such lamps would aid persons living on these streets to secure a gas supply to their houses, particularly in the more sparsely settled districts.

The total number of arc lamps on a 450-watt lamp basis maintained by the New York Edison Company in Manhattan and The Bronx, including those assigned by the United Electric Light and Power Company and the Westchester Lighting Company, on December 31, was 5,135, but as the 5,000 mark was not passed until after the 1st of December, we do not begin to get the benefit of the reduced rate of \$95 per lamp, for lamps in excess of 5,000 until January 1, 1907, as per contract.

On February 1, the date of the beginning of the contract, thirty-eight lamps were transferred from the New York Edison Company district to the United district, and are shown in Table "A," as lamps discontinued by the New York Edison Company, and relighted by the United Electric Light and Power Company.

The New York Edison Company have also billed eight (8) electric arc lamps in the district of the Westchester Lighting Company, from February 1, which were previously maintained as free lamps, in accordance with the conditions of their franchise; these lamps have been deducted from all figures given and will be deducted until the question of the legality of the rate is settled.

The cost of the supply of gas to public gas lamps on street service is not given in the tables, but at the rate of 75 cents per thousand cubic feet, as specified in "Laws of 1905," it can be figured at \$8.89 per lamp per year, for open flame gas lamps, and \$10.37 per lamp per year, for mantle gas lamps.

The total number of mantle gas lamps maintained by the Consolidated Gas Company in the Borough of Manhattan, includes two (2) lamps at the Casino, Central Park, which are on meter service. It is also proposed to install mantle burners in lamps in front of various police stations which are on meter service during the next year.

The effect of the appointment of additional Inspectors in October is noticeable in the improved condition of the lamps and lamp-posts, more than in the increased number of outages reported, owing to the Inspectors' daily reports on the condition of the lamps. The increased number of Inspectors permitted a reduction in the size of the districts, so that each individual lamp is now inspected at least once a week, besides which, each Inspector makes a general inspection of his district nightly to see that all lamps are burning properly, and reports any lamps that he finds defective or not lighted. The majority of defective lamps are usually found in certain sections of each district, and the lighting company is enabled by the reports to use additional care in the maintenance in such sections and to discover and guard against the cause of the trouble.

Tables "A" to "J" herewith give changes in lighting, repairs to gas lamps, new streets lighted, mains installed, etc., during the year.

Respectfully submitted,

WM. G. QUIRK,  
General Inspector of Street Lighting.

Department of Water Supply, Gas and Electricity,  
Bureau of Lamps and Gas,  
Nos. 13 to 21 Park Row,  
New York, December 31, 1906.

Mr. CHARLES F. LACOMBE, Chief Engineer of Light and Power, Nos. 13 to 21  
Park Row, New York:

Dear Sir—In accordance with your instructions, I hand you herewith data,  
tables, etc., as my report of work performed in this office during the year 1906.

Just before the beginning of the year, on account of your having been made  
Chief Engineer of Light and Power of the greater city, a general plan of reorganiza-  
tion of the Bureau was discussed and put into effect early in 1906. My duties as  
General Inspector over that part of the Bureau of Lamps and Gas, in which the  
general office and daily street inspection work is carried on, were largely increased.  
The Inspectors doing daily street work in the Borough of Manhattan were placed  
under my charge.

On account of the steadily increasing business of the Bureau, immediate steps  
were taken toward improving the system of handling the same. Recommendations  
were made proposing changes in the reports of the Inspectors, and a better method  
of keeping different records of the Bureau, which would make the work simpler and  
more accurate. These recommendations were adopted, and new forms of Inspectors'  
Daily Day, and Daily Extinguishment reports, as well as Special Reports, were  
compiled and immediately put into use. Some of the old record books were dis-  
carded altogether, and new ones of better denomination were substituted therefor.

These changes soon began to show good results. It was made possible to know  
just what each and every Inspector did each day, and considerably lessened the  
length of time for him to remain in the office to receive instructions and attend to  
other minor details, thereby giving him more time to spend on his district. Con-  
cerning the new records, more accurate results were obtained, owing to the nature  
of the additional information required in checking the reports and bills submitted by  
the different lighting companies of the Boroughs of Manhattan and The Bronx,  
as well as the doing away with a lot of unnecessary double entry work.

The new system of filing communications that was started last year has also  
been improved upon of late, and it has been made possible for but one man to file  
away all the letters and communications of citizens and other persons, as well as  
the reports of the Inspectors and General Inspectors of the different Boroughs.

The system in general of handling the work of the Bureau was considered so  
good, that in the latter part of the year you instructed me to inquire into the business  
methods of the Bureau in the Borough of Brooklyn, and of Queens, and to establish  
a similar working system in said Boroughs.

For the benefit of the General Inspectors now detailed in these Boroughs, requis-  
itions have been made for the necessary books, and other blanks, in order that the  
system of handling the work of the Bureau throughout the greater city may be uni-  
form, as far as possible.

#### The Inspection Service.

The Inspection Force for the Borough of Manhattan, during the first nine months  
of the year, consisted of eight men doing regular district work.

With the increasing number of public lamps erected, and the public demanding  
an increased lighting service on our public highways and parks, it was apparent  
that these few men were entirely inadequate to properly look after an average of  
21,311 public lamps, lighting upward of 444 miles of highway in this Borough, and  
in October you detailed two additional men to district work.

New York, January 1, 1906.

The above time table will show the time for lighting and extinguishing public  
electric lamps for the year 1906, all lamps to be lighted within one hour from the time  
of beginning to light, and extinguished within fifty minutes of the time of beginning to  
extinguish.

WM. B. ELLISON,

Commissioner, Department of Water Supply, Gas and Electricity.  
C. F. Lacombe, Chief Engineer of Light and Power.

Soon after the assignment to street work of these additional men, the Borough was reapportioned into ten inspection districts, one district being assigned to each Inspector. The system of inspection was revised, whereby the work of an Inspector consisted of four hours day work and three hours night work, actual working time.

As most of the inspection districts were subdivided into six sections, an Inspector was required to personally examine every public lamp-post in his district in the day-time, once a week—one section per day, in rotation, being inspected.

In going over his district in this manner, he made note of all repairs necessary to lamp-posts, and checked all repair items reported performed by the lighting companies on their regular reports to this Bureau, if the same had been properly attended to, as per order of the Department. It was also part of an Inspector's day work to witness the refitting of all pipes be found necessary to order refitted to public lamp-posts, in place of any of these pipes which had become useless through becoming rotten, or clogged up with condensation or sediment, which could not be cleared by use of force pump and rod. Special inspections were also made by him when required to do so.

In the three hours night work, the Inspector, as far as possible, covered his entire district, reporting upon the general lighting conditions, and all lamps either not burning (see Table "B," hereto attached) or improperly burning, as well as upon defective lighting (see Table "A"). He was also required to inspect all lamps reported by the lighting companies as being either newly lighted, or discontinued, and then to check the items of said lamps so reported, on report submitted by them.

For three days at the end of every month the Inspectors were obliged to give up the regular district inspection work, to read meters, both gas and electric, in all of the public buildings in each of their respective districts.

In regard to the work performed by the Inspectors, the writer begs leave to refer you to Tables "A" and "B," which were compiled from data on the reports of the inspectors, and which gave the following information:

Table A shows in a condensed form the number of notices sent in 1906 to the lighting companies of the Borough of Manhattan, to the Borough President, and to the Fire Department, regarding miscellaneous repairs needed to public street lamps.

As will be noted on this table, there were reported by our Inspectors 4,242 broken mantles during the year in Manhattan. This is comparatively a very small number of lamps out of commission, on account of broken mantles, considering that there was an average of 17,516 mantle gas and mantle naphtha lamps in said Borough during the year.

Table B shows a comparative statement of the number of gas, naphtha and electric lamp extinguishments reported by our Inspectors, the police and the lighting companies in the Boroughs of Manhattan and The Bronx during the year 1906.

As will be seen on this table, 19,627 extinguishments were reported by our Inspectors, 12,761 by the police, and 4,130 by the lighting companies, making a grand total of 36,518 extinguishments. As 1,760 of these were duplicates, however, i. e., the same items being reported both by our Inspectors and by the police, they were deducted from the grand total, making the net number of extinguishments for the year 34,758.

Considering that there was an average of 31,548 public gas, naphtha and electric lamps in commission during the year in the Boroughs of Manhattan and The Bronx, and the many hindrances that arise daily to perfect lighting service, it cannot be denied that the lighting service, as far as maintenance of lamps is concerned, was exceptionally good.

Fewer complaints regarding lighting were received during the past year than for several years previous, and in practically all cases where the complaint was received of a lamp being out of commission, a report had already been made to this office.

Table C shows net number of gas, naphtha and electric lamp extinguishments reported each month during the year 1906 by our Inspectors, the police and the lighting companies, and the companies against which the extinguishments were charged.

Regarding the Borough of The Bronx, the inspection force consisted of six men under the supervision of General Inspector Hugh F. McLaughlin. All work of a routine character was conducted by him, and regular reports of the work of the Inspectors were duly sent to this office. In regard to the more detailed work required in the ordering of repairs to lamp-posts, the checking of bills and reports of the lighting companies, the investigation of complaints of lighting, the requests for additional lamps or changes in location of existing lamps, the same were all handled directly from this office and finally disposed of after having received the attention of the General Inspector in the regular way.

During the year there were in commission an average of 10,237 public gas, naphtha and electric lamps, lighting upward of 767 miles of highways in the Borough of The Bronx. No data is submitted herewith regarding the miscellaneous repairs ordered performed to the public lamps in said Borough, however, on account of the small number of same.

#### The Work of the Office and the Office Working Force.

During the year there were 730 lighting orders and 537 repair orders sent to the various lighting companies of the Boroughs of Manhattan and The Bronx.

The work performed on the lighting orders consisted of the erection and lighting of 2,408 new gas, naphtha and electric lamps; the relighting of 871 gas and naphtha lamps, and the discontinuance of 3,530 gas and naphtha lamps.

Under repair orders, the lighting companies performed 2,992 repairs to the public gas lamp-posts in the Borough of Manhattan, and 1,023 repairs in the Borough of The Bronx. Orders were also given for the painting of the public gas lamp-posts in said Boroughs; 15,862 were painted in Manhattan, while 5,987 were painted in The Bronx.

All of these items which appeared on bills submitted by the lighting companies, before being audited, were regularly checked by our Inspectors, and then rechecked in the records of this office.

The Inspectors' daily day and daily extinguishment reports were carefully gone over, and as a result, as is shown in Table A, 7,255 notices were sent to the lighting companies in the Borough of Manhattan regarding miscellaneous repairs to public lamps, 359 notices to said companies to apply force pump to pipes of gas lamp-posts in an endeavor to clear the same, and 554 notices of broken street signs were sent to the Borough President.

Tables B and C show the net number of extinguishments that were reported by our Inspectors, the police and the lighting companies in the Boroughs of Manhattan and The Bronx, for which there was a deduction made on the lighting companies' bills of \$2,737.55. As noted in said tables there were 34,758 extinguishments reported during the year. To reach this figure a careful comparison is made between the reports submitted by the lighting companies, those of our Inspectors, and those of the police, in order to avoid duplicating a charge for the same extinguishments. These reports are carefully filed away, and can be referred to on short notice by reference to our Extinguishment Records, which are kept up to date.

A record was also kept of all lamp material given to the different lighting companies of the Boroughs of Manhattan and The Bronx during the year. Table D, hereto attached, shows the same in detail, and material on hand December 31, 1906.

Permits were issued to six private citizens during the year for the erection, lighting and maintaining, at their own respective cost and expense, of gas and electric lamp-posts on public highways, on condition that said lamp-posts be lighted and extinguished in accordance with Schedule for the Lighting and Extinguishing of Public Lamps. Table E, hereto attached, shows the same in detail.

During the year there were a number of public lamp-posts damaged by private persons, and as a result of the investigation conducted by our Inspectors as to the parties responsible, upon communicating with them in regard to same, the sum of \$330.30 was collected. Table F, hereto attached, shows in detail the claims collected. It is further stated, in connection with this matter, that during the year the following work was performed to public lamp-posts at the expense of private persons:

Lamp-posts removed.....	50
Lamp-posts reset.....	26
Service pipes refitted.....	4
Standpipes refitted.....	2
Columns releaded.....	2
Posts straightened.....	1

The above work was charged to these individuals, either on account of their having damaged the lamp-posts, or that the lamp-posts were to be removed or reset to permit construction work of some kind.

The daily reports of the Chief Gas Examiner of the different photometric stations of the greater city were kept on file, and duplicate copies of such of them showing violations of the statutes of this State were duly transmitted to the Corporation Counsel for his attention.

The regular weekly report of the Bureau, of work done to public lamps and lamp-posts in the Boroughs of Manhattan and The Bronx, as required by statute, was compiled and duly transmitted to the Commissioner of this Department.

In addition to the above, the general work of correspondence with private citizens, the City departments, etc., regarding public lamps in the Boroughs of Manhattan and The Bronx, was carried on.

The office working force consisted of four men doing clerical work, and a Stenographer, all of whom may be commended for their services.

The Inspectors doing regular district work on the streets should also be commended, as they appear to show much interest in their work, and were efficient in the performance of it.

PRIMO PORCELLO,  
General Inspector.

TABLE A.

The following is a statement showing in condensed form the number of notices sent in 1906 to the lighting companies of the Borough of Manhattan, the Borough President and the Fire Department, regarding miscellaneous repairs needed to public street lamps.

	Lamps Broken.	Globes Broken.	Domes Broken.	Tops Broken.	Mantles Broken.	Miscellaneous Repairs to Lamps.	Total.

Dec. 28	Broadway, east 1 north Two Hundred and Twenty-sixth street .....	Tarry & Trench Company, Two Hundred and Fifteenth street and Hudson River, city....	17 70
Total amount collected.....			\$300 30

Department of Water Supply, Gas and Electricity,  
Bureau of Lamps and Gas, Nos. 13 to 21 Park Row,  
New York, January 1, 1908.

Mr. CHARLES F. LACOMBE, Chief Engineer of Light and Power:

Dear Sir—I submit herewith a general report of the lighting of public buildings under my charge for the year 1906.

The work of this year was largely devoted to the review and revision of plans submitted to this Bureau indicating the nature, number and distribution of lights proposed for installation therein by the various architects formulating said plans. Four Inspectors assisted in this work by inspecting such of the various public buildings as were open at night, averaging three night inspections each week for each man, a total of eighteen hundred inspections made during this year. This resulted in many improvements being made in the public lighting, judged by both the standpoints of efficiency and economy. We succeeded as well in having the power and lighting lines, both gas and electricity, separated in these various buildings.

This action secured quite a saving to the City, and also improved the lighting services considerably.

Considerable saving was also effected by the extension of the gas regulator system throughout the public buildings, and over and above this saving the illumination in many of these structures was improved from 33 1/4 to 50 per cent.

Another feature to which it is desired to draw attention has been the fact that this Bureau has caused many improvements to be made from time to time in the various

public buildings by bringing to light numerous violations that have been found to exist in the electrical equipments of these buildings, and of which fact the Electrical Bureau was not aware. As these violations were discovered, the Electrical Bureau was informed and requested to make a detailed examination of the premises in which such defects existed and upon receipt of a report confirming same a copy was forwarded to the Department under whose jurisdiction the building was operated, with instructions that we would require their immediate removal or we would be compelled to discontinue current to the premises.

A summary of what has been done in each of the different departments during the year is presented in the following:

#### Armories.

While the number of buildings have not increased, some old armories have been destroyed and new ones erected in lieu of the same, while improvements have been made in others.

As stated in my report for the year 1904, we then had before us plans and specifications of two new armories of the Sixty-ninth and Seventy-first Regiments, respectively. These plans have since been reviewed and revised by this Bureau, the armories have been completed and put in operation with the following results:

In the Seventy-first Regiment we have been informed by a number of illuminating engineers that it is considered one of the best illuminated armories in the United States. In the case of the Sixty-ninth Regiment Armory a great improvement over the lighting of the former quarters of this regiment has taken place, still there are many changes to be desired, as judged from the standpoints of efficiency and economy. This appears due to the fact that the recommendations of this Bureau were not adhered to when the plans of this structure were revised. Members of the Armory Board, however, have since assured us that an error has been made and will endeavor in the near future to make the changes in the lighting as recommended by this Department. The improvements made in the old armories were the renovation of the colonel's room of the Twenty-second Regiment and the installation of the mantle system of illumination in the drill hall of the Eighth Regiment Armory. It is understood that the Armory Board is now considering applying for sufficient funds to erect new armories for the Twenty-second Regiment, Second Battery and the Eighth Regiment. Renovations are now being made in the present quarters of the Eighth Regiment, to make same available for Squadron A, when the proposed new armory for the Eighth Regiment is in service.

#### Bellevue and Allied Hospitals.

During the past year many improvements have been accomplished in this Department, the new Harlem Hospital with ambulance station attached has been erected and put in operation. An annex to Nurses' Home of Bellevue Hospital has been completed and equipped with modern form of gas lighting under the direction of this Bureau; a new Gouverneur and a new Fordham Hospital have been completed and placed in operation, with modern forms of illumination, as recommended by this Department. These two new buildings have taken the place of the old structures which have been in use for many years past.

Plans have been submitted for Pavilions "A" and "B" of the New Bellevue Hospital, now in course of construction on the site of the present institution. This whole plant, when completed, will extend from Twenty-sixth to Twenty-ninth street, and from the east side of First avenue to the shore of the East River.

Plans of the two pavilions are the first of a series of plans which will eventually be submitted to this Bureau for review and approval.

#### Department of Charities.

Many marked improvements are now under way in the buildings of this Department, in fact, possibly greater than any other Department in the City. This is due to the fact that by the efforts of this Bureau and the constant agitation of the subject, the Department of Public Charities has realized the inefficiency of the method that has been employed by them for many years past in lighting their public buildings, most of which are situated on Blackwell's Island. As a result of our efforts, plans are being formulated and submitted to this office, upon which we indicate the nature, number and distribution of lights we recommend installing in the various structures on the island. This work is a large one, involving rewiring, and in many cases, repiping a total of about one hundred and fifty buildings, requiring an installation of about twenty thousand incandescent lamps. Many visits were made to the island in order to better judge the number and distribution of lights required and also to be certain that the equipment, when completed, will be not only efficient, but economical.

During the past year, this Department has submitted plans for a pavilion, knitting mill and shoe factory, respectively, on Hart's Island. These plans have been reviewed and revised by this Bureau, and the work is now under the course of installation.

#### Department of Correction.

The Second District Prison, commonly known as Jefferson Market Prison, is now being being equipped with the electric incandescent lighting under the supervision of this Bureau. This will effect a great improvement in this building, insuring greater comfort to the prisoners and affording superior facilities to the employees who care for and guard them.

#### Department of Education.

This Department, during the past year has made many changes in its equipment of buildings. This is due to the fact that by direction of the Mayor and by the authority extended by the Sinking Fund Commission, a large number of temporary quarters were rented for a short time and utilized for school purposes, being designated as "Annexes" to the existing public schools. This action was taken in order to provide as near as possible for each child of school age a full school day. Many of these buildings have since been abandoned as new schools or new additions to old schools were completed.

This is the only Department that has not submitted their plans to this office for review and approval. This is due to the fact that up to the present, you have not deemed it wise to take up this work until such time as better facilities are afforded it in the way of increased inspection. It is hoped the day is not far distant when we can pass upon and revise these plans, for it is known, not only from reports of Inspectors, but from personal observation, that great improvements could be made. From our standpoint these buildings are improperly lighted, the waste of gas and electric current being positively distressing.

#### Fire Department.

This Department has made considerable improvements during the past year in its general building equipment. Plans and specifications of fifteen buildings have been submitted to this Bureau, reviewed and revised. Many old structures have been completely renovated, while new ones have been erected. The improvements in the way of lighting suggested and urged by this Department in the year 1903 and agreed to by the Fire Department during that year are being installed in all new buildings, and also in those buildings now being renovated.

Much credit is due to this Department, when compared with other Departments in its economical use of electrical current or gas. Personal observation and the reports of our Inspectors show that this Department is more conscientious in the use of these two commodities than many others in the City.

#### Department of Health.

This Department has made much improvement in its general equipment and deserves credit for its cooperation with this Bureau in the lighting of its buildings. In fact no Department in the City to-day has furnished more aid through its cooperation than the Department of Health. The result has been that a modern and improved form of illumination is in operation in many of its buildings to-day, and particularly those buildings that have been erected during the past year. During the year 1906, this Department either started or completed a total of twelve buildings, many of which were attached to the well-known Willard Parker Hospital in East Sixteenth street. This Department is constantly making improvements, and as constantly adding to its equipment; ample provision should always be made for it in our annual Budget.

#### Public Buildings and Offices.

This Department has increased its building equipment, but I regret to state that the conditions here, so far as cooperation with this Bureau is concerned, are not at all

TABLE E.

Table Showing Number of Gas Regulators in Commission on Public Buildings Under Contract With Gas Consumers' Association in the Boroughs of Manhattan and The Bronx for the Year 1906 and Memorandum of Work Done and Merchandise Furnished by Them.

January 1, 1906—		
Number of gas regulators on rental.....	..	347
New installations during year.....	218	..
Discontinued .....	12	..
		206

In commission December 31, 1906.....

Number of inspections.....	5,400
Number of defects found and remedied by the Gas Consumers' Association..	247
Number of complaints sent by Department of Water Supply, Gas and Electricity and attended to by the Gas Consumers' Association.....	185
Number of places where stoppages in pipes were pumped or cut out.....	151
Number of regulators changed .....	19
Number of new burners put on.....	9,280
Number of Bristol record pressure gauge tests.....	11

Average monthly amount of gas being passed by regulators, cubic feet.....	14,635
Average monthly amount of saving being effected by regulators, 18 per cent., cubic feet.....	3,312

Average monthly consumption without regulators would have been, cubic feet.....

Average monthly saving being effected by the regulators, 3,212 cubic feet, 75 cents per thousand.....	\$2,409 00
Average monthly rental cost of regulators, 553 at \$1.23 each.....	680 00

Average monthly net saving being effected.....

Per annum, about.....	\$20,000 00
-----------------------	-------------

## Maintenance.

January 1, 1906—

Number of gas regulators owned by the City on public buildings, but maintained under contract with Gas Consumers' Association in the Boroughs of Manhattan and The Bronx.....	24
Discontinued during the year.....	1

In commission December 31, 1906.....

Number of inspections.....	279
Number of complaints found and remedied by the Gas Consumers' Association	5
Number of complaints sent by Department of Water Supply, Gas and Electricity and attended to by the Gas Consumers' Association.....	3
Number of complaints requiring pumping or cutting out.....	4
Number of new burners put on.....	53
Average monthly cost of maintenance per regulator.....	\$1 40

## IX.

## BUREAU OF ELECTRICITY.

## BOROUGH OF MANHATTAN AND THE BRONX.

Department of Water Supply, Gas and Electricity,  
Bureau of Electricity,  
New York, August 12, 1907.

Hon. JOHN H. O'BRIEN, Commissioner:

Sir—In accordance with your instructions, I have the honor to submit herewith report of the operations of the Electrical Bureau for Manhattan and The Bronx for the year 1906.

## High-Tension Electric Service.

During 1906 there were constructed 433.138 miles of subways for high-tension electric service.

The following is a summary of high-tension subway construction in the Borough of Manhattan, from the introduction of the subway system in 1886 to December 31, 1906:

	Subways Built, Miles.
1886-1897—Under direction of the Board of Electrical Control.....	738.992
1898-1901—Under direction of the Department of Public Buildings, Light- ing and Supplies.....	565.658
1902-1906—Under direction of the Department of Water Supply, Gas and Electricity .....	1,094.613
Total to December 31, 1906.....	2,399.263

## Average Yearly Construction—

	Subways, Miles.
Twelve years, 1886-1897.....	61.583
Four years, 1898-1901.....	141.415
Five years, 1902-1906.....	218.922

## Low-Tension Electric Service.

The length of low-tension subways built in 1906 is 561.884 miles.

The following is a summary of construction for low-tension electric service since the introduction of the subway system in Manhattan and The Bronx in 1886 to December 31, 1906:

	Subways Built, Miles.
1886-1897—Under direction of the Board of Electrical Control.....	1,278.969
1898-1901—Under direction of Department of Public Buildings, Lighting and Supplies .....	482.474
1902-1906—Under direction of Department of Water Supply, Gas and Electricity .....	1,324.140
Total to December 31, 1906.....	3,085.583

## Average Yearly Construction—

	Miles.
Twelve years under the Board of Electrical Control.....	106.581
Four years under Department of Public Buildings, Lighting and Sup- plies .....	120.618
Five years under Department of Water Supply, Gas and Electricity..	264.828

The figures given in the foregoing part of this report on the subject of new construction are summaries for three separate periods, when the work was successively under the direction of the Board of Electrical Control, the Department of Public Buildings, Lighting and Supplies, and the present Department of Water Supply, Gas and Electricity. The subjoined tables give the details, including both high and low-tension electric service.

## Aerial Wiring.

Our inspectors are continually discovering wires strung across the streets by private concerns, which are not in possession of a franchise authorizing them to use the streets, and, consequently, without the permit of this Department to install the same. It has, therefore, been necessary for this Bureau to keep an inspector and laborer constantly at work, searching for and removing these conductors, and during the past year, the number of these wires, together with abandoned wires, removed by our inspectors, without additional expense to the City, was approximately 182,900 feet or 34.64 miles.

The various companies operating electrical conductors in the Boroughs of Manhattan and The Bronx have reported the removal of poles and wires as per the following table:

	Poles.	Wires.
Western Union Telegraph Company.....	128	157.5
Stock Quotation Telegraph Company.....	..	6.5
New York Edison Company.....	..	20.
New York Telephone Company.....	..	1,826.
Automatic Fire Alarm Company.....	..	.75
Holmes' Electric Protective Company.....	..	19.04
Manhattan Fire Alarm Company.....	..	1.5
Postal Telegraph-Cable Company.....	..	4.
American District Telegraph Company.....	..	5.5

## Poles. Wires.

Special Fire Alarm Electrical Signal Company.....	..	4.5
Westchester Lighting Company.....	9	.359
	137	2,047.649
—together with those removed by our Inspectors.....	..	34.64
	137	2,082.289

TABLE IV.

Permits issued for the construction of subways and subsidiaries since the organization of this Bureau in 1898:

Permits	1898.	1899.	1900.	1901.	1902.	1903.	1904.	1905.	1906.
Subway .....	140	350	320	391	723	953	973	1,493	1,481
Subsidiary .....	973	2,950	3,010	2,789	3,861	4,071	4,172	5,185	8,761
Total.....	1,113	3,300	3,330	3,180	4,584	5,024	5,145	6,678	10,242

TABLE V.

Permits issued in 1906 for erection of poles and stringing overhead and underground electrical conductors:

For signal wires .....	5,102
For electric lighting .....	6,076
For pole lines .....	644
For resetting dangerous poles .....	196
For City lighting and lamp-posts .....	419
Underground conductors .....	6,140
Total .....	18,577

The following table gives a summary of the permits issued for aerial conductors from 1898 to December 31, 1906:

TABLE VI.  
Exterior Wiring.

Permits Issued.	1898.	1899.	1900.	1901.	1902.	1903.	1904.	1905.	1906.
Signal wires .....	1,485	2,334	2,600	2,416	2,059	2,756	2,772	3,751	5,102

The above shows that certificates issued by this Department covering electrical equipments installed in buildings for 1,969,644 sixteen candle-power lamp equivalents were found to comply with the rules and regulations of this Department. We have 4,823 applications on hand, for which we were unable to issue certificates, the work being in an unfinished condition.

The following is a summary of the number of certificates, complaint notices and permits issued by the Electrical Bureau for the Boroughs of Manhattan and The Bronx, from 1898 to 1906, inclusive:

TABLE VIII.

The Electrical System of the New York Central and Hudson River Railroad Company Within the Limits of New York City.

During the past year the New York Central and Hudson River Railroad Company installed an electrical system for the operation of their trains in New York City, and the following is a description of their apparatus and appliances:

Power House—The Port Morris power house, including the boiler rooms, coal bunkers and the generating rooms, is 167 feet wide, 237 feet long and 105 feet high. The switch house is a separate building and is located about 40 feet from the power house.

Power House Equipment—The power house is designed to accommodate a battery of twenty-four Babcock & Wilcox water tube boilers, rated at 625 horsepower each. Sixteen are installed for initial operation, making a present boiler capacity of 10,000 horsepower.

The condensers are of the counter-current surface type and each is directly connected to its turbine base and contains about 17,000 square feet of cooling surface.

The coal handling machinery has a capacity of 80 tons per hour and the ash handling capacity is 25 tons per hour.

In the turbine room is installed a 50-ton traveling crane with auxiliary 10-ton hoist.

Provision is made to accommodate six 5,000 kilowatt turbo-generators, four of which are installed for initial operation. The turbines are of the Curtis five-stage vertical type. These machines are about 15 feet in diameter at the base and 30 feet high from the floor to the top of the generator.

The four generators each have a capacity of 5,000 kilowatts, making a total of 20,000 kilowatts for initial operation and are wound for three-phase current of 25 cycles and 11,000 volts. The leads of the generators are brought down to the floor through brass pipes to the ducts leading to the high-tension switches in the switch house, the arrangement being such that no high-tension conductors are exposed in the turbine room.

The exciter system consists of two 150 kilowatt turbo-generators and one 150 kilowatt induction motor-generator, furnishing current at 125 volts pressure; also one exciter storage battery consisting of seventy-four cells, having a capacity of 1,200 amperes for one hour.

The station is operated from the operating gallery on the north side of the turbine room. The arrangement of the switchboards in this gallery is symmetrical, and all cables and copper connections running to the switchboard are carried in concrete trenches under an Alberene stone floor. The main operating switchboard containing all the control switches and the instruments necessary for the operation of the station, is located in the centre of the operating gallery.

The switch house is 50 feet 10 inches wide by 100 feet long. In the switch house is installed the high-tension switching equipment, consisting of bus bars, oil switches, instruments, transformers, etc.

Transmission Lines—The transmission lines are partly overhead and partly underground. The system is designed to give the greatest protection against interruptions of all kinds. Each substation may be fed from either power station, and the lines are so disposed that no ordinary accident could cut off a substation from its supply.

All overhead transmission lines are supported by lattice steel poles set in concrete foundations and spaced about 150 feet.

There are 6.2 miles of territory of overhead transmission lines consisting of No. 0000 bare stranded high tension cables, 1,000,000 c. m. bare stranded low-tension feeders and rubber covered remote control cable. The aggregate length of overhead conductors is 48.5 miles.

The remainder of the transmission lines are in ducts underground or in steel pipes on walls. There are 12.24 miles of territory of underground construction, making an aggregate of 87.26 miles of underground cable.

Where the high tension cables change from underground to aerial a cable terminal tower is provided which is equipped with substantial lightning arrester equipment.

Substations—There are four substations within the City limits of New York, Substations Nos. 1, 2, 3 and 7, located at Fiftieth street and Lexington avenue, Mott Haven Junction, Kings Bridge and Bronx Park, respectively. At the substations, the high tension current of 11,000 volts is stepped down to direct current at 666 volts for delivery to the third rail.

Substation Equipment—The main equipment in each substation consists of three rotary converters and their accompanying transformers and subsidiary apparatus. For initial operation, the substations are equipped with the following:

Substation No. 1—Three 1,500 kilowatts rotary converters receiving alternating current at 460 volts and converting it to direct current at 666 volts; nine 550 "air cooled" type transformers with a normal ratio of 11,000 volts to 460 volts for power; six 120 kilowatts air cooled transformers for boosters; storage battery of 4,020 amperes for one hour rating; two boosters.

Substation No. 2—Has the same equipment as No. 1, except that the storage battery has a rating of 3,750 amperes for one hour.

Substation No. 3—Three 1,000 kilowatts rotary converters; nine 375 kilowatts air cooled transformers for power; six 120 kilowatts air cooled transformers for boosters; storage battery of 3,000 amperes for one hour rating.

Substation No. 7—Has the same equipment as No. 3, except that the storage battery has a capacity of 2,250 amperes for one hour rating.

The high tension lines enter the substations either underground or overhead, are brought to oil switches which are electrically operated and are designed to carry a substantial overload.

There are two controlling boards in each substation, one a bench board which carries the principal instruments and control apparatus and the other an upright board carrying the auxiliary control apparatus for remote control, lighting, etc.

The direct current switchboards are equipped with motor-operated switches and circuit breakers which are controlled from the bench board. The positive feeders leaving these switchboards supply the third rail with current at 666 volts.

Each substation is supplied with all necessary subsidiary apparatus, such as a traveling crane which can be operated electrically or by hand, also lighting transformers, etc.

Circuit Breaker Houses—The four third rails and auxiliary feeders are joined together through circuit breakers installed in small houses at intervals along the line, thereby increasing the effective conductivity. There are nine circuit breaker houses installed for initial operation.

Equipment—For the initial operation there are thirty-five electric locomotives which were built by the American Locomotive Works. The electric locomotives are of the multiple unit, type M control. Each is equipped with four 550 horsepower No. 84 direct connected General Electric Company's motors. The weight of one motor is about 11,450 pounds, and the total weight of one electric locomotive complete is 199,000 pounds.

There are 63 multiple unit, type M control motor cars, now being put in service. Each motor car is equipped with two 200 horsepower No. 69-C General Electric Company's motors; the gear ratio is 26 to 49. The bodies of the cars were built by the American Car and Foundry Company, at Berwick, Pennsylvania. They are rigid steel construction throughout, 60 feet long and have a seating capacity of sixty-four passengers. The trucks were built by the American Locomotive Works.

The electric locomotives and motor cars are equipped with Westinghouse air brakes. Up to the present date the electric service is as follows:

From Grand Central Station to High Bridge, Hudson Division, there are forty trains daily consisting either of three or four multiple unit cars. There are also in daily service ten trains, each propelled by an electric locomotive.

From Grand Central Station to Wakefield, Harlem Division, there are thirty trains daily, consisting either of three or four multiple unit cars.

While the New York, New Haven and Hartford Railroad are contemplating using electricity to operate their train service, they have not proceeded with the installation of electrical apparatus within the City limits, but are engaged in the construction of an overhead 11,000 volt single phase trolley system north of the City line.

Respectfully yours,

FRANK E. BROWN, Electrical Engineer.

## APPROVED PAPERS.

FOR THE WEEK ENDING FEBRUARY 29, 1908.

## No. 82.

Resolved, That, in pursuance of subdivision 8 of section 188 of the Greater New York Charter, the Board of Estimate and Apportionment is hereby requested to authorize the Comptroller to issue Special Revenue Bonds to the amount of forty thousand dollars (\$40,000), for the purpose of providing funds for the maintenance and operation of the new public bath at Twenty-third and Twenty-fourth streets and Avenue A, Borough of Manhattan, for the year 1908.

Adopted by the Board of Aldermen, February 11, 1908.

Received from his Honor the Mayor, February 25, 1908, without his approval or disapproval thereof; therefore, as provided in section 40 of the Greater New York Charter, the same took effect as if he had approved it.

## No. 83.

Resolved, That it is recommended to the Commissioner of Water Supply, Gas and Electricity that two lamp-posts be erected, street lamps placed thereon and lighted in front of the Baptist Church of the Redeemer, No. 184 West One Hundred and Thirty-fifth street, in the Borough of Manhattan.

Adopted by the Board of Aldermen, February 11, 1908.

Received from his Honor the Mayor, February 25, 1908, without his approval or disapproval thereof; therefore, as provided in section 40 of the Greater New York Charter, the same took effect as if he had approved it.

## No. 84.

Resolved, That permission be and it is hereby given to Flora Gardenzaun to place and keep a wall case in front of her premises No. 741 Columbus avenue, in the Borough of Manhattan, in conformity with the provisions of the ordinance in such case made and provided, such permission to continue only during the pleasure of the Board of Aldermen.

Adopted by the Board of Aldermen, February 11, 1908.

Received from his Honor the Mayor, February 25, 1908, without his approval or disapproval thereof; therefore, as provided in section 40 of the Greater New York Charter, the same took effect as if he had approved it.

## No. 85.

Resolved, That it is recommended to the Commissioner of Water Supply, Gas and Electricity that lights be placed and maintained in Avenue D, from Flatbush avenue to East Thirty-fourth street; Clarendon road, from Nostrand avenue to East Thirty-eighth street; East Thirty-fourth street, from Clarendon road to Avenue D; also one electric light on the corner of Brooklyn avenue and Malbone street, in the Borough of Brooklyn.

Adopted by the Board of Aldermen, February 11, 1908.

Received from his Honor the Mayor, February 25, 1908, without his approval or disapproval thereof; therefore, as provided in section 40 of the Greater New York Charter, the same took effect as if he had approved it.

## No. 86.

Resolved, That permission be and the same is hereby given to the Orpheus Social Club to suspend a banner over the sidewalk in front of the premises on the southeast corner of Fifteenth street and Fifth avenue, in the Borough of Brooklyn, such permission to continue only up to and including February 18, 1908.

Adopted by the Board of Aldermen, February 11, 1908.

Received from his Honor the Mayor, February 25, 1908, without his approval or disapproval thereof; therefore, as provided in section 40 of the Greater New York Charter, the same took effect as if he had approved it.

## No. 87.

Resolved, That permission be and the same is hereby given to the Atlas Athletic Club to parade with an advertising wagon for the period of two weeks after the receipt hereof from his Honor the Mayor, under the supervision of the Police Department.

Adopted by the Board of Aldermen, February 11, 1908.

Received from his Honor the Mayor, February 25, 1908, without his approval or disapproval thereof; therefore, as provided in section 40 of the Greater New York Charter, the same took effect as if he had approved it.

## No. 88.

Resolved, That it is recommended to the Commissioner of Water Supply, Gas and Electricity that a lamp-post be erected, a street lamp placed thereon and lighted in front of No. 55 Reade street, in the Borough of Manhattan.

Adopted by the Board of Aldermen, February 11, 1908.

Received from his Honor the Mayor, February 25, 1908, without his approval or disapproval thereof; therefore, as provided in section 40 of the Greater New York Charter, the same took effect as if he had approved it.

## No. 89.

Resolved, That permission be given to the Howard Packing Box Factory to place one movable chute in front of premises No. 20 Clarke street, in the Borough of Manhattan, the said chute to be used only for the purpose of transmitting merchandise to and from premises.

Adopted by the Board of Aldermen, February 11, 1908.

Received from his Honor the Mayor, February 25, 1908, without his approval or disapproval thereof; therefore, as provided in section 40 of the Greater New York Charter, the same took effect as if he had approved it.

## No. 90.

Resolved, Permission is hereby given the Realty Association of No. 176 Remsen street, to erect a glass awning over the sidewalk on the southeasterly side of Flatbush avenue, between DeKalb avenue and Fulton street, in front of the Sagamore Theatre, formerly the old Montauk Theatre, same to be done under the supervision of the President of the Borough of Brooklyn, and to continue during the pleasure of the Board of Aldermen.

Adopted by the Board of Aldermen, February 11, 1908.

Received from his Honor the Mayor, February 25, 1908, without his approval or disapproval thereof; therefore, as provided in section 40 of the Greater New York Charter, the same took effect as if he had approved it.

## No. 91.

Resolved, That permission be and the same is hereby given to the New York Butchers' Dressed Meat Company to keep and maintain a platform scales in front of the engine room of their abattoir, on the north side of West Thirty-ninth street, 215 feet west of Eleventh avenue, Borough of Manhattan.

Adopted by the Board of Aldermen, February 11, 1908.

Received from his Honor the Mayor, February 25, 1908, without his approval or disapproval thereof; therefore, as provided in section 40 of the Greater New York Charter, the same took effect as if he had approved it.

## No. 92.

Resolved, That permission be and the same is hereby given to Thomas Cochran, Jr., to erect a temporary awning during rainy or inclement weather over the sidewalk in front of the premises No. 1 East Thirty-sixth street, in the Borough of Manhattan, provided that the same shall be erected so as to conform in all respects with the provisions of the ordinance in such case made and provided; the work to be done at his own expense and with the consent and subject to the supervision and direction of the President of the Borough of Manhattan; such permission to continue only during the pleasure of the Board of Aldermen.

Adopted by the Board of Aldermen, February 11, 1908.

Received from his Honor the Mayor, February 25, 1908, without his approval or disapproval thereof; therefore, as provided in section 40 of the Greater New York Charter, the same took effect as if he had approved it.

## No. 94.

Resolved, That permission be and the same is hereby given to the American Society for the Prevention of Cruelty to Animals to erect and place a public drinking fountain for man and beast in the centre of Catharine slip, opposite the dividing line between Nos. 22 and 24 Catharine slip, the said fountain to be paid for by the said American Society for the Prevention of Cruelty to Animals and to be of a pattern and design approved by the Art Commission of The City of New York. The said drinking fountain to be erected under the supervision of the Commissioner of Water Supply, Gas and Electricity, and the water therefor shall be supplied by the Department of Water Supply, Gas and Electricity, without expense to the said society.

Adopted by the Board of Aldermen, February 18, 1908.  
 Approved by the Mayor, February 26, 1908.

## No. 95.

Resolved, That, in pursuance of the provisions of subdivision 8 of section 188 of the Greater New York Charter, the Board of Estimate and Apportionment be and is hereby requested to authorize the Comptroller to issue Special Revenue Bonds to an amount not to exceed two hundred thousand dollars (\$200,000), the proceeds whereof to be applied to the purchase of fire hose for use of the Fire Department.

Adopted by the Board of Aldermen, February 18, 1908.  
 Approved by the Mayor, February 26, 1908.

## No. 96.

Resolved, That the President of the Borough of Manhattan be and is hereby authorized and requested to number and renumber the buildings on Broadway, between Forty-second and Forty-fourth streets, in such manner and to such extent as may be necessary.

Adopted by the Board of Aldermen, February 18, 1908.  
 Approved by the Mayor, February 26, 1908.

P. J. SCULLY, City Clerk.

## POLICE DEPARTMENT.

February 14, 1908.

The following proceedings were this day directed by the Police Commissioner:

Ordered, That the proceedings of February 7, 1908, requesting the Commissioners of the Sinking Fund to authorize the Comptroller to execute renewal of lease of premises for use as a station house for the Two Hundred and Seventy-ninth Precinct, formerly Seventy-ninth Precinct, be and are hereby amended so that the description of such premises shall read "Broadway, opposite Mott avenue, Far Rockaway," instead of "Mott and Central avenues, Far Rockaway."

Ordered, That consent be and is hereby given to the substitution of Fidelity and Deposit Company of Maryland in the place of Arthur C. J. Schroeder and Charles W. Lewry, Jr., as surety, in the proposal of Merchant & Evans Company, for furnishing plumbing, etc., supplies.

Ordered, That consent be and is hereby given to the substitution of the United States Fidelity and Guaranty Company as surety in the place of James F. Knapp and William H. Muhlhahn in the proposal of Cavanagh Bros. & Co., for furnishing plumbing, etc., supplies.

It appearing that William J. Eggers was dismissed from his position as Detective-Sergeant in the Police Force of The City of New York on the 30th day of December, 1905, and that the rank of "Detective-Sergeant" was changed to "Lieutenant" under chapter 160 of the Laws of 1907; now,

On reading order of the Supreme Court, Kings County, on remittitur from the Court of Appeals, dated February 3, 1908, and on reading and filing opinion of the Corporation Counsel dated February 13, 1908,

Ordered, That William J. Eggers be and he is hereby reinstated to the rank of Lieutenant in the Police Force of The City of New York.

Ordered, That the Chief Clerk be and is hereby directed to prepare payrolls for the salary of the said William J. Eggers from the date of his dismissal to the date of his reinstatement, with interest.

Ordered, That the Municipal Civil Service Commission be respectfully informed that Thomas Kelly, certified on eligible list of February 6, 1908, from which to appoint one Painter, declined appointment.

Ordered, That requisition be and is hereby made upon the Municipal Civil Service Commission for a further eligible list from which to enable the Police Commissioner to appoint one Painter, with compensation at the rate of \$4 per day.

Referred to the Comptroller.

Requisition No. 17, Police Department Fund (Sites and Buildings), \$4,760.

Death Reported.

Thomas McCabe, Cleaner, attached to Central office, on February 11, 1908.

On File, Send Copy.

Resolution adopted by the Board of Aldermen February 4, 1908, and approved by the Mayor February 11, 1908, as follows:

"Resolved, That, in pursuance of the provisions of section 419 of the Greater New York Charter, the Police Commissioner be and he is hereby authorized and empowered to enter into a contract, without public letting, for the shoeing of the horses of the Police Department to an amount not to exceed the sum of money appropriated for that purpose for the year 1908."

Copy to Inspector of Repairs and Supplies and to the Bookkeeper.

Resolution adopted by the Board of Aldermen February 4, 1908, and approved by the Mayor February 11, 1908, as follows:

"Resolved, That, in pursuance of the provisions of section 419 of the Greater New York Charter, the Police Commissioner be and he is hereby authorized and empowered to enter into a contract, without public letting, for the stabling and boarding of the horses of the Police Department to an amount not to exceed the sum of money appropriated for that purpose for the year 1908."

Copy to Inspector of Repairs and Supplies and to the Bookkeeper.

Reports of Lieutenant in command of Boiler Squad, dated February 10, 11 and 13, 1908, relative to engineers' licenses granted. For publication in the CITY RECORD.

Special Order No. 37, issued this day, is hereby made part of the proceedings of the Police Commissioner.

The resignation of the following Special Patrolman is hereby accepted:

Monroe Reed, employed by Interborough Rapid Transit Company, No. 13 Park row, Manhattan.

THEO. A. BINGHAM, Police Commissioner.

### POLICE DEPARTMENT.

February 15, 1908.

The following proceedings were this day directed by the Police Commissioner:

Ordered, That the proceedings of February 4, 1908, requesting the Commissioners of the Sinking Fund to authorize the Comptroller to execute a lease of premises to be used for the purposes of the Second Sub-Precinct to the Third Precinct, be amended to read as follows:

Ordered, That the Commissioners of the Sinking Fund be and are hereby respectfully requested to authorize the Comptroller to lease the store and basement of premises No. 36 East Ninth street, 25 by 100 feet, for the purposes of the Second Sub-Precinct, to the Third Precinct, which is the Traffic Squad of the Police Department of the City of New York. The following information is given in pursuance of circular issued under authority of the Commissioners of the Sinking Fund, adopted October 22, 1902:

1. The name of owner or lessor? Charles Kaye, owner, No. 12 West Twenty-first street.

2. Full description of the property? Store and basement of premises No. 36 East Ninth street, 25 by 100 feet.

3. Term of proposed lease and if it includes privilege of a renewal? One year and nine months, from May 1, 1908, to February 1, 1910, with privilege of renewal for one year.

4. Rental and how payable? Two thousand dollars per annum, payable quarterly.

5. Particulars as to alterations and repairs? Owner to paint and kalsomine the walls and ceiling of said store and basement, thoroughly scrape and clean the floors of said store and basement, put in a urinal in basement, put gas and electric fixtures now in store in good condition and put in a few drop lights, or gas or electric fixtures, in basement; cover opening at top of stairway leading to the first loft.

6. Does owner pay water rent? Yes.

7. Does owner pay for light, heat and janitor service? Owner pays for heat only.

8. Necessity for the lease? For the purpose of the Traffic Squad of the Police Department of the City of New York.

9. Are the premises the most reasonable that can be secured in the neighborhood for the purposes desired? Yes.

10. Is the appropriation from which the rental is to be paid sufficient to cover it? Appropriation made to Finance Department for purposes of rents.

Whereas, Harry S. Millar, employed on probation as Patrolman, under order of January 15, 1908 (his name appearing on eligible list of the Municipal Civil Service Commission, dated January 3, 1908), not having qualified on account of physical disability,

Ordered, That such employment on probation be and is hereby revoked.

Special Order No. 38, issued this day, is hereby made part of the proceedings of the Police Commissioner.

#### Special Order No. 38.

#### Reinstated:

William J. Eggers having been reinstated with the rank of Lieutenant is assigned to One Hundred and Fifty-second Precinct, to take effect 8 p. m., February 15, 1908.

The following temporary assignments are hereby ordered:

#### Lieutenant.

Thomas F. Levis, One Hundred and Forty-seventh Precinct, assigned to command precinct during absence of Captain Patrick Murphy on vacation, from 12.01 a. m., February 15, 1908.

#### Sergeant.

Patrick H. Fern, One Hundred and Eighty-fourth Precinct, assigned as Acting Lieutenant in precinct during absence of Lieutenant Edward J. Harrington on vacation, from 8 a. m., February 16, 1908.

## Patrolman.

Joseph Hickey, One Hundred and Forty-seventh Precinct, assigned to One Hundred and Eighty-second Precinct, duty in Tenth District Magistrates' Court, for five days, from 8 a. m., February 15, 1908.

The following extensions of temporary assignments are hereby ordered:

THEO. A. BINGHAM, Police Commissioner.

## POLICE DEPARTMENT.

February 18, 1908.

The following proceedings were this day directed by the Police Commissioner:

Whereas, Appropriation has been made to the Police Department by authority of the Board of Estimate and Apportionment and the Comptroller authorized to issue Corporate Stock of The City of New York in amount not exceeding \$2,000,000 for the purpose of providing means for the acquisition of sites and the erection of buildings thereon for the use of the Police Department of The City of New York; and

Whereas, A portion of such amount is to be applied to the erection and equipment of a station house, prison and stable for the Second Police Precinct, on premises on the west side of Greenwich street, known as Nos. 156 and 158, running through to and including Nos. 163 and 165 Washington street, and it appearing that there are certain special made articles specified to be used in the construction of the said station house, prison and stable;

Ordered, That, in pursuance of the provisions of section 1554 of the Charter, application be and is hereby made to the Board of Estimate and Apportionment for permission to contract for the same, and upon such permission being granted, that it be incorporated in the specifications for the construction of the said building, namely:

Stable Fittings—J. L. Mott's manufacture, or equal thereto, and approved by the architects.

Steel Cell Work—Pauly Patent Interlocking Bat Grating construction, or system equal thereto, and approved by the architects.

Pauly Sliding Door Spring Jail Lock, or lock equal thereto, and approved by the architects.

Finishing Hardware—P. & F. Corbin manufacture, or other manufacture equally as good, and approved by the architects.

Plumbing—J. L. Mott's manufacture plumbing fixtures, or other make equally as good, and approved by the architects.

Also the following articles and their makes:

Pumps—Deane Steam Pump Company and Henry R. Worthington.

Hot Water Heater and Tank—Berryman.

Automatic Solenoid Motor Starter—Sundh or Cutler, Hammer.

Hot Water Temperature Regulator—Power's or Tagliabue's.

Damper Regulator—Power's or Tagliabue's.

Water Heater—J. L. Mott Iron Works.

Storage Tank—Andrew J. Corcoran.

Patrolman Edward Clifford, Twenty-first Precinct, February 19, 1908.  
 Patrolman Timothy Foley, One Hundred and Sixty-second Precinct.

THEO. A. BINGHAM, Police Commissioner.

### DEPARTMENT OF DOCKS AND FERRIES.

New York, October 29, 1907.

The following communications were received, action being taken thereon as noted, to wit:

From the Mayor (74621)—Transmitting communication from General Henry M. Bingham of Philadelphia, Pa., requesting information in relation to the wharves, ferries, expenditures in connection therewith, etc., in The City of New York. Information furnished.

#### From the Corporation Counsel—

1 (74665). Transmitting, approved as to form, contract with George B. Post & Sons for services as architects (No. 1057) in connection with the construction of superstructure or ferry house and appurtenances at the Thirty-ninth street ferry, Brooklyn. Contract sent to Post & Sons for execution.

2 (74578). Requesting to be informed as to the Commissioner's views as to what ferries, if any, should be acquired by the City and as to the price or value thereof. Information furnished.

From the Municipal Civil Service Commission (74669)—Authorizing the reassignment of Peter Kenney, Dock Laborer. Kenney ordered reassigned.

From Charles H. Barrett (74668)—Requesting permission to occupy a plot of ground at Broad Channel Station, Jamaica Bay, Borough of Queens. Privilege granted to occupy Lot No. 28 of Block 45, an area of 2,250 square feet, to commence November 1, 1907, to continue during the pleasure of the Commissioner until May 1, 1912, compensation to be at the rate of \$27 per annum, payable in advance to the Cashier.

From Austin & McLanahan (74328)—Taking exception to the recommendation of this Department to the Commissioners of the Land Office that a condition be inserted in grant, in case such grant is made, of land under water in the vicinity of Harsell street, Long Island City, Borough of Queens, to their client, Charles M. Reynolds, to the effect that the grantee shall furnish access by means of a public highway to dock or docks erected on the lands granted. Filed, the objection having been withdrawn.

From the North Side Board of Trade (74641)—Transmitting certified copy of resolution adopted October 23, 1907, objecting to the use of the dock foot of Lincoln avenue, Harlem River, Borough of The Bronx, for the dumping of garbage and ashes and requesting that the dump be removed. Answered that the matter should be taken up with the Department of Street Cleaning.

From Winfred L. Georger, agent for Hunkins & Willis Cement Company (74645)—Suggesting a new arrangement for steel trusses, purlins, etc., in the proposed sheds for the Chelsea section, North River, so as to enable the Department to use the company's patent roof tiles. Answered that owing to the progress already made in getting out the iron for the structures it is deemed inexpedient to make any changes.

From Erick T. Christensen (74667)—Requesting reinstatement in the Department as Diver. Christensen reinstated with compensation at the rate of \$1.25 per hour, while employed.

From the Engineer-in-Chief—

1 (74664). Recommending the issuance of an order for the driving of test piles and making such other examinations as may be necessary for the purpose of obtaining data for the improvement of the water front in the vicinity of Fifty-third street, East River. Order issued to Engineer-in-Chief.

2 (74672, 74673). Reporting that the work of furnishing and delivering Diver's supplies, etc., under Class 8 of Contract No. 1051, was commenced on October 16, 1907, by J. Edward Ogden Company, and that the work of furnishing and delivering lumber under Class 4 of Contract No. 1004 was completed on October 17, 1907, by J. C. Orr Company. Comptroller notified.

John M. Sheehan, contractor (74652), was authorized, pursuant to Article F of Contract No. 1074, for paving within the marginal street area between West Nineteenth street and West Twenty-second street, North River, to modify and change the contract by omitting the following:

1. Four receiving basins, two of which are located at West Nineteenth street and the remaining two at West Twentieth street;
2. Two manholes;
3. 395 feet of 16-inch cast iron drain pipe;
4. 180 feet of 18-inch cast iron pipe leading to the bulkhead wall at Pier 60; 12-inch cast iron pipe is to be substituted and placed for this item in the manner called for in the contract.

The four receiving basin-heads already purchased by the contractor are to be turned over to the Department. The sum of \$1,500, as agreed to by Sheehan, will be deducted for the above changes from the amount due him under the contract.

In accordance with his request (73533), permission was granted to Charles Schmitt to occupy Lot No. 34 of Block 19-a, at Shad Creek, Jamaica Bay, Borough of Queens, an area of 2,500 square feet, to commence November 1, 1907, and to continue during the pleasure of the Commissioner until May 1, 1912, compensation to be at the rate of \$30 per annum, payable in advance to the Cashier.

The following Department orders were issued:

No.	Issued To and For.	Price.
23543.	Mutual Towel Supply Company, toilet supply for November, 1907, Pier A offices.....	\$25 00
23544.	Kanouse Mountain Water Company, distilled water for November, 1907, per gallon.....	06
23545.	Brooklyn Automobile Company, storage of Department's Locomobile for November, 1907.....	22 50

The Corporation Counsel was requested to have a representative appear on behalf of the City at the dispossession proceedings brought against Frank R. Kramer in connection with his occupation of the premises foot of One Hundred and Twenty-first street and between One Hundred and Twenty-first and One Hundred and Twenty-second streets, Harlem River, on October 30, 1907.

In answer to their application (74677) for permission to repair water pipe at approach to Pier 8, East River, Messrs. Byrne & Murphy were notified that such application should come from the lessees of the property, the Compania Trasatlantica.

Permits were issued to Azel F. Merrell for the occupation of Lots Nos. 19 and 20, areas of 2.8 acres and 5.4 acres, respectively, for the cultivation of shellfish, in Jamaica Bay, Kings County, New York, upon the same terms and conditions as the permit granted him September 12, 1907, for the occupation of similar plots of space at the locality in question.

J. A. BENSEL, Commissioner.

New York, October 30, 1907.

The following communications were received, action being taken thereon as noted, to wit:

From the Mayor (74681)—Directing that until, in his judgment, the finances of the City warrant it, no new contracts for work in this Department be advertised. Filed. Receipt of communication acknowledged.

From the Corporation Counsel (74619)—Transmitting check and voucher for the sum of \$137.50 from the New York Central and Hudson River Railroad Company, in payment of claim for rent of bulkhead foot of the southerly half of Sixtieth street, North River. Filed.

From the Comptroller (74659)—Stating that a voucher has been filed in the Finance Department in favor of the Richmond Light and Railroad Company in the sum of \$20,144.82, for electric current furnished this Department up to August 1, 1907, and requesting to be advised as to how the charge for light furnished for the month of June was computed. Answered that during the month in question the meter did not record the quantity consumed, and the bill for that month was adjusted by taking the rate charged for the month of May, viz., \$26.322 per day, or \$789.66 for the thirty days.

From the Municipal Civil Service Commission (74684)—Authorizing the reassignment of William J. Cullen, Marine Souder. Cullen ordered reassigned.

From William Bendernagel (74679)—Requesting permission to occupy a plot of ground at Shad Creek, Broad Channel, Jamaica Bay, Borough of Queens. Privilege granted to occupy Lots Nos. 29 and 30 of Block 19a, an area of 4,584 square feet, to commence November 1, 1907, and to continue during the pleasure of the Commissioner until May 1, 1912, compensation to be at the rate of \$55 per annum, payable in advance to the Cashier.

From O'Brien Brothers (74683)—Requesting permission to load riprap and derrick stone on scows at the outer end of pier foot of One Hundred and Fifty-eighth street, North River. Privilege granted, to continue during the pleasure of the Commissioner, until April 30, 1908, compensation to be at the rate of \$6 per day, payable at the end of each week to the Dockmaster.

J. A. BENSEL, Commissioner.

New York, October 31, 1907.

The following communications were received, action being taken thereon as noted, to wit:

From the Comptroller (74554)—Transmitting copy of claim filed by Gioacchino Cataronna, in the sum of \$500, alleged to be due for personal injuries sustained on July 22, 1907, owing to the negligent operation of derrick foot of West Fifty-seventh street, North River, and requesting information in relation thereto. Information furnished.

From the Municipal Civil Service Commission (74557)—Submitting list of persons eligible for appointment to the position of Stationary Engineer. The following were appointed to the position, with compensation at the rate of 56¼ cents per hour, while employed:

John Hilton.	Thomas F. Burke.
James J. Hand.	Frank W. Pearsall.
Joseph Moran.	John B. Bradshaw.
Gilbert Rodger.	Charles H. Hall.

From Mrs. Louisa Lagomzena (74736)—Requesting permission to maintain portable stand for the sale of fruit at the approach to ferryhouse of the Erie Railroad Company, foot of West Twenty-third street, North River. Privilege granted, to commence November 1, 1907, and to continue during the pleasure of the Commissioner until April 30, 1908, compensation to be at the rate of \$2 per month, payable monthly in advance to the Dockmaster.

From John Fleming (74696)—Requesting permission to attach an apron to the present overhang on the dumping board occupied by him, foot of Clinton street, East River, Borough of Manhattan. Permit granted, the work to be done under the supervision of the Engineer-in-Chief.

From the Tartar Chemical Company (74623)—Requesting permission to erect a single-story frame shed on the easterly side of Gowanus Canal, about 100 feet northerly of Ninth street, Brooklyn. Permit granted, the work to be done under the supervision of the Engineer-in-Chief and in accordance with plans submitted as amended.

From the Empire City Subway Company, Limited (74620)—Requesting permission to open granite pavement at approach to Pier 28, East River, between Dover and Roosevelt streets, for the building of a subsidiary connection for the accommodation of the New York Telephone Company. Permit granted upon the usual terms, the work to be done under the supervision of the Engineer-in-Chief.

From Greason & Son (74597)—Requesting permission to make repairs to the bulkhead and coal pockets foot of Harrison street, Brooklyn. Permit granted, the work to be kept within existing lines and to be done under the supervision of the Engineer-in-Chief.

From the National Lead Company (74595)—Requesting permission to make repairs to bulkhead between Hudson avenue and Gold street, Brooklyn. Permit granted, the work to be done under the supervision of the Engineer-in-Chief and to be kept within existing lines.

From A. E. Outerbridge & Co.—

1 (74565). Requesting permission to repair the fender system on Pier 47, North River, and to renew some of the braces under the pier where necessary; also calling attention to the damage caused to the pier by the berthing of the White Star Line steamers at Pier 48, North River, and asking that the Department reconstruct the pierhead of Pier 47 so that further damage may not be caused. Permit granted for the repairs as requested, the work to be kept within existing lines and to be done under the supervision of the Engineer-in-Chief. Notified that there is no authority vested in the Department under which it could do the work requested at Pier 47.

2 (74654). Requesting permission to cut an opening in the north side of shed on Pier 47, North River. Permit granted, the work to be done under the supervision of the Engineer-in-Chief.

From the Harlem Independent Hygeia Ice Company (74522)—Requesting permission to lay a 12-inch salt water suction pipe through the marginal street and under the pier foot of East One Hundred and Eighth street, Harlem River, Borough of Manhattan, and to remove pavement in connection therewith. Permit granted upon the usual terms, the work to be done under the supervision of Engineer-in-Chief, the pipe to be laid under the pier in such manner as not to impair in any way the stability of the pier; rental for the pipe to be at the rate of \$300 per annum, payable quarterly in advance to the Cashier; the pipe to remain only during the pleasure of the Commissioner.

From Chistian Munson (74503)—Requesting permission to construct a sawdust bin on the pier foot of Twenty-fourth street, Brooklyn. Permit granted, the work to be done under the supervision of the Engineer-in-Chief, in accordance with amended plans, the bin to remain only during the pleasure of the Commissioner.

From the Southern Ship Building Company (74475)—Requesting permission to construct a small pier at Tottenville, Arthur Kills, Borough of Richmond. Permit granted, the work to be done in accordance with amended plans and under the supervision of the Engineer-in-Chief, the structure to remain only during the pleasure of the Commissioner.

From the New York, New Haven and Hartford Railroad Company—

1 (74572). Requesting permission to build four mooring cribs between Walnut and Locust avenues, Port Morris, Borough of The Bronx. Permit granted, the work to be done under the supervision of the Engineer-in-Chief.

2 (74074). Returning bill of this Department for \$500 for repairs to timber basin between Ninetieth and Ninety-first streets, East River, damaged by tug transfer No. 6 on March 30, 1907, and stating the company is not liable for the damage. Letter sent asking payment of the bill.

From the Snare & Triest Company (74718)—Stating they prepared a bid for submission on Contract No. 1099, for the construction of new ferryhouse for new Staten Island Ferry, foot of Whitehall street, Manhattan, but owing to the uncertainty of the contract's being let at this time the company will not submit same. Filed.

From Samuel Holmes (74694)—Asking whether the City intends to sell the ferryboats "Castleton" and "Stapleton." Answered that the City does not intend to sell the boats.

From John Damers & Co. (74676)—Asking whether the City is about to sell the ferryboat "Middletown." Answered that the boat will not be sold at the present time, and that if the City decides to sell this or any other boat due notice will be given in the City Record.

From the Manhattan Shipbuilding and Dry Dock Company (74663)—Requesting a lease of the southerly half of the pier foot of East One Hundred and Ninth street, Harlem River, Manhattan. Commissioners of the Sinking Fund requested to approve a lease of the premises to the company for a term of ten years, commencing from the first day of the month next succeeding the date upon which the lease shall be approved by the Commission, at a rental of \$2,200 per annum; lessee to have the privilege of mooring at the southerly side of the pier a dry dock, and to also have the privilege of erecting a shed on the premises to be not more than 100 feet in length by 25 feet in width; the remaining terms and conditions of the lease to be similar to those now in use by this Department.

From Michael J. Forbes (74525)—Requesting a lease of Lots Nos. 1 and 2 of Block 27 at Broad Channel, Jamaica Bay, Borough of Queens. Answered that permit will be granted upon payment of rent at the rate of \$33.12 per annum.

From George W. Barney (74481)—Stating that he has been charged varying rates for his three-wheel motor cycle over the Staten Island Ferry, and requesting to be advised as to the proper charge. Rate fixed for this type of vehicle at thirty cents, and Barney so advised.

From E. E. Olcott (74225)—Stating he will discontinue the use of fifteen feet of floor space on West One Hundred and Twenty-ninth Street Pier, North River, on September 30, 1907. Filed, the permit for the space expiring by limitation on October 31, 1907, to which date rent has been paid.

From Frank A. Acer, Attorney (74173)—Requesting that John W. Cobb, at present employed as an Oiler in this Department, be changed to Marine Engineer, Cobb, through an oversight or a technicality, not having been taken over into the service of the City at the inception of the Municipal Ferry under his proper title. Answered that the request cannot be complied with, as Cobb failed to pass the Civil Service examination for the position of Marine Engineer.

From Edmund J. Healy (74012)—Protesting against dredging being done in front of his property at Far Rockaway, Jamaica Bay, Borough of Queens. Filed, the permits for the work having been revoked.

From John J. O'Gara, Dock Laborer in the Department (74224)—Requesting pay for the time lost by him due to injury alleged to have been received while in the course of his duty. Denied, the Department having no knowledge of the injury.

From the Engineer-in-Chief—

1 (Bureau Orders Nos. 3919, 4017). Returning order for the supervision of construction of awning shed in rear of bulkhead north of Ninety-first street, East River, by Yorkville Construction and Supply Company, the lease of the premises having been revoked. Filed.

2 (Bureau Order No. 4714). Returning order for the supervision of repairs to backing log on bulkhead between Ninety-first and Ninety-second streets, East River, by Yorkville Construction and Supply Company, lease of the premises having been revoked. Engineer-in-Chief notified to have repairs made by the force of the Department.

3 (74691). Reporting that the work of laying granite pavement between Thirteenth and Fourteenth streets, North River, under Class 2 of Contract No. 1096, was completed on October 28, 1907, by Atlanta Contracting Company. Comptroller notified.

4 (74690). Reporting that James O'Brien, Dock Laborer, died on October 26, 1907. Name dropped from the list of employees.

5 (74688). Submitting report of work done under his charge and supervision for the week ending October 19, 1907. Filed.

6 (74552). Reporting encroachment on land under water owned by the City at Nicholas avenue, Borough of Richmond, by one-story building owned by Jacob I. Housman and rented to Irving Knox as a carpenter shop. Housman and Knox notified that permit must be obtained if they desire to remain in occupation of City property.

From the Superintendent of Docks (74580). Recommending that the permit granted to American Ice Company for occupation of 200 feet of space on north side of pier foot of Fifteenth street, North River, be revoked, the company having vacated the premises. Permit revoked as of November 1, 1907, the date to which rental has been paid.

From the Superintendent of Ferries (74692)—Reporting that Edward Coveney, Foreman of Dock Laborers, died on October 25, 1907. Name dropped from the list of employees.

From John J. Herrick, Mechanical Engineer (74649)—Recommending that a new contract be printed and advertised for furnishing about 10,000 tons of coal for the Thirty-ninth Street Ferry. Ordered prepared for advertising as Contract No. 1110.

The permit (73724, 74622) granted August 23, 1907, to Frank C. Norton for dredging in Nortons Creek and for depositing dredged material in the marsh land known as Long Hassock, Jamaica Bay, Borough of Queens, was, by order of the Commissioner, revoked.

Messrs. Sanderson & Son (73870) having stated, in response to notice from this Department, that the asphalt pavement in front of Pier 50, North River, appears to be in good condition and not in need of repairs, they were notified that another examination by the Department shows the pavement to be damaged, and they were again requested to make necessary repairs.

In accordance with his recommendation (73187), the Engineer-in-Chief was directed to order the necessary dredging for a slip 70 feet in width along the southerly side of the pier near the foot of Canal street, Stapleton, Borough of Richmond, such dredging to be done to a depth of 20 feet at mean low water outshore to the 20-foot contour line, under Contracts Nos. 1060 and 1072, respectively.

In accordance with the order of the Commissioner (74720) the pay of Michael J. Cogan, Dock Laborer, was fixed at the rate of \$18 per week, to take effect November 2, 1907, and the pay of John Andrews, Dock Laborer, was changed from \$55 per month to 31¼ cents per hour, while employed, to take effect November 1, 1907.

The resignations of the following employees were accepted:

- (74602). John Murray, from the position of Dock Laborer.
- (74601). Morris S. Schapiro, from the position of Financial Clerk.
- (74600). Gustav Stehle, from the position of Deckhand.
- (74549). James R. Craig, from the position of Marine Engineer.

The Engineer-in-Chief reported (74650) that on October 7, 1907, the scow "Katherine B. Guinan," owned by Daniel Guinan, sprung a leak, resulting in the capsizing of her cargo of gravel while lying on the south side of the pier foot of West Fifty-second street, North River, and that in sinking the scow hit the brick scow "C. M. Streeter," causing this latter scow to capsize with her cargo of brick, the owner of the "C. M. Streeter" being Streeter Brothers; further, the pier itself was damaged. Guinan and Streeter Brothers ordered to dredge shoaled area at the point in question and to make necessary repairs to the pier, under the supervision of the Engineer-in-Chief. In the event of failure to comply with this notice the work will be done by the Department at their cost and expense.

Sealed bids or estimates were received and opened for preparing for and building foot of Whitehall street, East River, a new ferryhouse for the new Staten Island Ferry, under Contract No. 1099, as follows:

John J. Hopper.....	\$666,333 00
Phoenix Construction Company.....	714,679 00
Post & McCord (Inc.).....	524,900 00

Bids rejected.

By direction of the Commissioner, permission was granted the Consolidated Gas Company to occupy the northerly half of the pier foot of East Twenty-first street, East River, commencing November 1, 1907, and continuing during the pleasure of the Commissioner until April 30, 1908, rental to be at the rate of \$3,000 per annum, payable quarterly in advance to the Cashier.

Bonds in the sum of \$3,000 each for John J. Finn, Peter Finn and George S. Forde, Financial Clerks, were transmitted to the Comptroller.

The Auditor reported that the following were audited and forwarded to the Finance Department for payment:

- 1. Payroll of the Municipal Ferry force for the month ending October 31, 1907, amounting to \$56,619.46.
- 2. Payrolls for the month ending October 31, 1907, for Commissioner's office, Construction Force, Repair and Maintenance Force and officers and appointees, amounting to \$31,986.43.

The Cashier reported that moneys were received and deposited as follows:

- 1. Revenues from Staten Island Ferry privileges for the month of October, 1907, amounting to \$1,293.38.
- 2. Revenues from Thirty-ninth Street (Brooklyn) Ferry privileges for the month of October, 1907, amounting to \$120.41.
- 3. Staten Island Ferry receipts for the month of October, 1907, amounting to \$53,041.45.
- 4. Thirty-ninth Street (Brooklyn) Ferry receipts for the month of October, 1907, amounting to \$16,937.57.

The following Department orders were issued:

No.	Issued To and For.	Price.
23546.	Mutual Towel Supply Company, toilet supply for November, Ferry Bureau .....	\$34 75
23547.	Thomas B. Stillman, chemical analyses, not to exceed.....	500 00
23548.	Thomas Morgan, horse, harness and driver, 100 days, per day....	3 25
23549.	Thomas Flannigan, horse, harness and driver, 100 days, per day..	3 25

A communication (73912) was received from the Enterprise Transportation Company requesting permission to repair the fender system on outer corner of Pier 10, East River. Filed, permission having been granted.

J. A. BENSEL, Commissioner.

## BOROUGH OF THE BRONX.

### BUREAU OF BUILDINGS.

I herewith submit a report of operations of the Bureau of Buildings, Borough of The Bronx, for the week ending February 22, 1908.

Plans filed for new buildings (estimated cost, \$118,100).....	21
Plans filed for alterations (estimated cost, \$6,150).....	6
Unsafe cases filed.....	7
Violation cases filed.....	17
Unsafe notices issued.....	12
Violation notices issued.....	19
Complaints lodged with the Bureau.....	4
Number of pieces of iron and steel inspected.....	188

P. J. REVILLE,

Superintendent of Buildings, Borough of The Bronx.

John H. Hanan, Chief Clerk.

## BELLEVUE AND ALLIED HOSPITALS.

A regular meeting of the Board of Trustees of Bellevue and Allied Hospitals was held on Tuesday, January 28, 1908, at 4 o'clock.

Present—Dr. Brannan, the President, in the chair; Messrs. Stern, Robbins and Paulding, Trustees, and Mr. Hebbard, the Commissioner of Charities. Mr. Sachs excused.

The minutes of the meeting of January 21 were read and approved.

The following bills were presented for approval, and, on motion, duly seconded, it was

Resolved, That they, having been duly audited by the Finance Committee, be approved and forwarded for payment:

Robert W. McCully.....	\$149 00
John H. Parker Company.....	18,870 00
Thomas Cockerill & Son.....	16,486 60
McKim, Mead & White.....	3,219 09

Dr. S. T. Armstrong, the General Medical Superintendent, reported as follows:

From January 19 to January 25, inclusive, fifty-two operations were performed at Bellevue Hospital, five at Gouverneur Hospital, twelve at Harlem Hospital, and seven at Fordham Hospital, at all of which the Attending Surgeons or their assistants were present.

There has been much trouble with various engineering factors in Harlem Hospital, and a thorough investigation has been made of all the matters that need attention by the Supervising Engineer, and he has been directed to prepare specifications for the work that should be done. The estimates for this work would cost about \$2,400, and it is recommended that it be referred to the Building Committee, for consideration and report.

The hose at Harlem Hospital has, on test, been found to be unsatisfactory, and estimates have been asked for hose, each section of the hose to have the label of test of the Underwriters' Laboratories. The plan to accept no hose that did not have the test of that important institution was adopted in this Department in October. A number of bids have been received, and the lowest bidder is the Gutta Percha Rubber Manufacturing Company, whose hose was once tested by the Underwriters' Laboratories, and at that time found satisfactory, but the representative of the Underwriters' Laboratories states that at present that manufacturing firm is not on their list of recommended hose. The next lowest bidder, the Eureka Fire Hose Company, is \$84 more, and is on the list of the Laboratories. They agree to deliver hose, in accordance with the requirements of the Laboratory, each section so marked, within two days. The Gutta Percha and Rubber Manufacturing Company, who are the lowest bidders, insist that they have behind them forty years of proper trade standing, and that they will furnish the hose with the Laboratory labels. It is the opinion of the Trustees that the estimate should be awarded to them, and if the goods are not tendered within the time specified, or are not delivered as specified, that the purchase should be made from the Eureka Fire Hose Company. The reason this matter is submitted for your consideration is that in November estimates were obtained from several dealers in this city, for hose that was needed in Bellevue Hospital. The delivery made by the lowest bidder was of hose, each section of which did not have the label of test of the Underwriters' Laboratories, as prescribed. There has been considerable correspondence with the dealer since, and the hose manufacturers have tried to insist that their hose is just as good, and have not yet made a delivery of the hose required, in consequence of the rejection of hose that was not up to standard, and which it is believed is the only kind that should be used in the hospitals of this Department.

On motion, duly seconded, it was

Resolved, That the engineering matters at Harlem Hospital, which need attention, and which it is estimated would cost about \$2,400, be referred to the Building Committee for consideration and report.

On motion, duly seconded, it was

Resolved, That no action be taken on the matter of hose for Harlem Hospital until the advice of the Board of Underwriters has been obtained. Further, that the General Medical Superintendent be instructed to communicate with this Board, and obtain its opinion for sending the kind of hose proper to be used.

On motion, duly seconded, it was

Resolved, That the recommendation to reject the bid of the Manhattan Supply Company, for engineers' supplies, because of the fact that they wrote in on the bid, be approved.

### Communications.

A communication, dated January 22, 1908, was received from Parish & Schroeder, inclosing weekly report of the Inspector on the Training School for Women Nurses. On motion, duly seconded and carried, they were placed on file.

The report of Inspector Bonnaud, for the week ending January 25, on the construction of the coal vault at Gouverneur Hospital, was received.

On motion, duly seconded and carried, it was placed on file.

The minutes of the Executive Committee of Bellevue Hospital for the meeting held on Wednesday, January 22, 1908, were received, and, on motion, duly seconded and carried, they were placed on file.

Action on the nominations of the Harlem Hospital Medical Board for the year 1908 was deferred.

A lien dated January 21, 1908, of Duparquet, Huot & Moneuse, was received, and, on motion, duly seconded and carried, it was placed on file.

A communication dated January 23, 1908, was received from the Department of Health, requesting Bellevue and Allied Hospitals to correct records given by patients.

On motion, duly seconded, it was Resolved, to request the General Medical Superintendent to instruct those having charge of the records in the Admitting Office to exercise great care in getting the names, addresses, ages, etc., of patients exact upon their records.

#### Unfinished Business.

Mr. Robbins called attention to the fact that the fence which the John H. Parker Company had been instructed to remove from its position in the grounds of Bellevue Hospital was still there, and, on motion, duly seconded, it was

Resolved, That the Secretary write again to John H. Parker Company, instructing them to remove this fence without delay.

#### New Business.

On motion, duly seconded, it was Resolved, That the Gouverneur Hospital Medical Board be requested to supply the Board of Trustees with a list of medical and surgical out-patient appointments for the coming year.

On motion, the Board adjourned.

J. K. PAULDING, Secretary.

### BOARD OF REVISION OF ASSESSMENTS.

A meeting of the Board of Revision of Assessments was held in the Council Chamber, City Hall, on Thursday, January 16, 1908, at 11 o'clock a. m.

Present—N. Taylor Phillips, Deputy and Acting Comptroller; George L. Sterling, Assistant and Acting Corporation Counsel, and Lawson Purdy, President of the Department of Taxes and Assessments.

On motion of the Assistant and Acting Corporation Counsel, the minutes of the meeting of January 9, 1908, were approved as printed in the CITY RECORD.

#### BOROUGH OF MANHATTAN.

##### Sewer in One Hundred and Twenty-fifth Street.

The assessment list for sewer in One Hundred and Twenty-fifth street, between Broadway and Claremont avenue, and objections of George Aschenbach et al., filed by E. J. Tinsdale, attorney, and of Koelsch Brothers and another, filed by Michael J. Mulqueen, attorney, also copy of testimony taken, were presented by the Deputy and Acting Comptroller, having been received from the Board of Assessors under date of January 13, 1908.

The Assessors reported that the assessment against Lots map Nos. 4 and 5 had been reduced 25 per cent., as determined by them at meeting held January 10, 1908.

Mr. Tinsdale and Mr. Mulqueen were heard.

On motion of the President of the Department of Taxes and Assessments, the objections filed against the assessment were overruled and the assessment list was confirmed, all the members voting in the affirmative.

#### BOROUGH OF RICHMOND.

##### Sewers in Arrietta Brook Watershed, etc.

The Deputy and Acting Comptroller presented the assessment list for constructing a sewer, with branches thereto, in the First and Second Wards, in the Borough of Richmond, in The City of New York, as laid down and designated on a certain map or plan entitled "Plan of Drainage, Showing Location, Size and Grades of Sewers in the Arrietta Brook Watershed, Designated Sewerage District No. 1-A, in the First and Second Wards, Borough of Richmond, City of New York. Prepared by the Board of Public Improvements Under Authority of Chapter 378 of the Laws of 1897, and Duly Adopted by the Said Board of Public Improvements on the 11th Day of April, 1900"; and also for constructing three receiving basins on the south side of Richmond turnpike, between Cebra avenue and Fiedler avenue, in the Second Ward of the Borough of Richmond, as necessary adjuncts to the Arrietta Brook Sewer System, and objections filed by the following attorneys: J. A. Flannery, for George W. Ford and others; Kenney & Eadie, for Mrs. S. T. Jones and others; T. Garrett, Jr., for Thomas A. Fulton and others; Turner, Rolston & Horan, for the Farmers' Loan and Trust Company; Hugo J. Stelzner, for J. J. Hayes and others; William Allaire Shortt, for A. D. Irving and others; James H. Fay, for Catherine L. Smith, as executrix; and by Elizabeth Taylor, John E. Swainson, A. R. Cronin, Mrs. M. Cronin and Mrs. Feeny, objectors in person; also copy of testimony taken before the Board of Assessors in the said matter, received from the Board of Assessors under date of December 23, 1907.

Messrs. Joseph A. Flannery, T. Garrett, Jr., and Turner, Rolston & Horan, by representative, attorneys, were heard in opposition to the assessment.

The Board of Assessors stated that at their meeting of December 11, 1907, they had reduced this list \$8,245.46—\$8,000 being the amount of a judgment against The City of New York, filed in New York County June 15, 1906, and \$245.46, covering Lots Nos. 6, 7, 8 and 10, in Block 1, as these four lots cannot be drained by the Arrietta Brook outlet.

No others appearing in opposition after notice, on motion of the President of the Department of Taxes and Assessments, the assessment list was referred back to the Board of Assessors, with instructions to reduce the gross amount of the present assessment by 20 per cent., and to confirm the same as so reduced, all the members voting in the affirmative.

#### BOROUGH OF THE BRONX.

##### Sewer in Summit Place.

The Deputy and Acting Comptroller presented the assessment list for sewer and appurtenances in Summit place, between Heath avenue and Boston avenue, and objections of E. Osworth Filby and others, filed by Arthur A. Brown, attorney, received from the Board of Assessors under date of January 14, 1908.

No one appearing in opposition after notice, on motion of the Assistant and Acting Corporation Counsel, the objections filed against the assessment were overruled and the assessment list was confirmed, all the members voting in the affirmative.

At 12.05 p. m., on motion of the President of the Department of Taxes and Assessments, the Board adjourned to meet on Thursday, January 23, 1908, at 11 o'clock a. m.

HENRY J. STORRS,

Chief Clerk, Board of Revision of Assessments.

### BOARD OF REVISION OF ASSESSMENTS.

A meeting of the Board of Revision of Assessments was held in the Council Chamber, City Hall, on Thursday, February 13, 1908, at 11.05 o'clock a. m.

Present—N. Taylor Phillips, Deputy and Acting Comptroller; Lawson Purdy, President of the Department of Taxes and Assessments.

In absence of the Chief Clerk, on motion of the President of the Department of Taxes and Assessments, Valentine F. Keller was unanimously appointed Chief Clerk pro tem.

On motion of the Deputy and Acting Comptroller, the reading of the minutes of the meeting of January 16, 1908, was dispensed with.

#### BOROUGH OF THE BRONX.

##### Sewer in East One Hundred and Thirty-eighth Street.

The Deputy and Acting Comptroller presented the assessment list for sewer and appurtenances in East One Hundred and Thirty-eighth street, between Gerard avenue and Walton avenue, and objections of August Belmont et al., filed by Charles Stewart

Davison, attorney, the hearing of which was postponed at meeting of January 16, 1908, received from the Board of Assessors under date of January 14, 1908.

Mr. Davison, attorney, was heard in opposition to the assessment.

On motion of the President of the Department of Taxes and Assessments, the assessment list was referred back to the Board of Assessors for further consideration, all the members present voting in the affirmative.

#### BOROUGH OF MANHATTAN.

##### Paving West One Hundred and Fifty-sixth Street.

The assessment list for paving with asphalt blocks and recurbing West One Hundred and Fifty-sixth street, from Audubon place to Riverside drive, and objections of A. M. Huntington et al., filed by H. G. Smith, attorney, the hearing of which was postponed at meeting held January 16, 1908, were presented by the Deputy and Acting Comptroller, having been received from the Board of Assessors under date of January 14, 1908.

Mr. Butterly, representing H. G. Smith, attorney, was heard in opposition to the assessment.

On motion of the President of the Department of Taxes and Assessments, the objections filed against the assessment were overruled and the assessment list was confirmed, all the members present voting in the affirmative.

##### Paving West One Hundred and Fifty-seventh Street.

The assessment list for paving with asphalt blocks and recurbing West One Hundred and Fifty-seventh street, from Audubon place to Riverside drive, and objections of the Lansing Company, filed by H. G. Smith, attorney, the hearing of which was postponed at meeting held January 16, 1908, were presented by the Deputy and Acting Comptroller, having been received from the Board of Assessors under date of January 14, 1908.

Mr. Butterly, representing H. G. Smith, attorney, was heard in opposition to the assessment.

On motion of the President of the Department of Taxes and Assessments, the objections filed against the assessment were overruled and the assessment list was confirmed, all the members present voting in the affirmative.

#### BOROUGH OF THE BRONX.

##### Regulating, etc., East One Hundred and Eightieth Street.

The Deputy and Acting Comptroller presented the assessment list for regulating, grading, curbing, flagging, laying crosswalks, building approaches and placing fences in East One Hundred and Eightieth street, from Webster avenue to Grand Boulevard and Concourse, together with a list of awards for damages caused by change of grade, and objections of John M. Gering, filed by A. C. & F. W. Hottenroth, attorneys; Estate of Frank Donnelly and others, filed by H. Hirsh, attorney, and applications for awards for damages, received from the Board of Assessors under date of January 23, 1908.

Mr. Andrews, for H. Hirsh, attorney, was heard in opposition to the assessment.

No others appearing in opposition after notice, on motion of the President of the Department of Taxes and Assessments, the objections filed against the assessment were overruled and the assessment list was confirmed, all the members present voting in the affirmative.

##### Regulating, etc., Creston Avenue.

The assessment list for regulating, grading, curbing, flagging, laying crosswalks, building approaches and placing fences in Creston avenue, from East One Hundred and Eighty-fourth street to Minerva place, together with a list of awards for damages caused by change of grade, and objections of William Wicke, filed by J. A. Flannery, attorney; Peter Engleman et al., filed by A. C. and F. W. Hottenroth, attorneys; J. M. Hotchkiss et al., filed by H. Hirsh, attorney; H. M. Plough, filed by Dessar & Ridgway, attorneys, were presented by the Deputy and Acting Comptroller, having been received from the Board of Assessors under date of January 31, 1908.

Mr. Tobias, representing Mr. Flannery, attorney; Mr. Chambers, representing Messrs. Hottenroth, attorneys, and Mr. M. Deiches, attorney, were heard in opposition to the assessment.

No others appearing after notice, the Deputy and Acting Comptroller stated that the hearing was closed and the decision of the Board reserved until the next meeting.

#### BOROUGH OF RICHMOND.

##### Sewers in Tottenville and Outlet in Fisher Avenue.

The assessment list for completing a system of pipe sewers in the former village of Tottenville, now in the Fifth Ward of the Borough of Richmond, The City of New York, etc., and also for constructing a temporary outlet extension of the sanitary sewer in Fisher avenue, from the present terminus to a point about 180 feet, more or less, northward, in the Fifth Ward of the Borough of Richmond, The City of New York, etc., and objections filed by Dessar & Ridgway, attorneys, for Wm. Frerichs et al. and by George A. Moore, owner, were presented by the Deputy and Acting Comptroller, having been received from the Board of Assessors under date of January 28, 1908.

Mr. Pecora, representing Messrs. Dessar & Ridgway, attorneys, was heard in opposition to the assessment.

No others appearing in opposition after notice, on motion of the President of the Department of Taxes and Assessments, the assessment list was referred back to the Board of Assessors with instructions to invite the opinion of the Corporation Counsel as to whether or not the assessment can be extended over the entire area covered by both the Jackman contract and the Whitford contract, all members present voting in the affirmative.

At 12.45 p. m., on motion of the President of the Department of Taxes and Assessments, the Board adjourned to meet on February 20, 1908, at 11 a. m.

VALENTINE F. KELLER,

Chief Clerk pro tem., Board of Revision of Assessments.

### CHANGES IN DEPARTMENTS, ETC.

THE COMMISSIONER HAS FIXED THE amounts of bonds required on contracts awarded by this Department, as follows:

On all contracts for supplies, 40 per cent. of the estimated cost;  
On all contracts, other than contracts for supplies, where the estimated cost is not over \$200,000, 40 per cent. of the estimated cost;  
On all contracts, other than contracts for supplies, where the estimated cost is over \$200,000, but not over \$1,000,000, 25 per cent. of the estimated cost;  
On all contracts, other than contracts for supplies, where the estimated cost is over \$1,000,000, 20 per cent. of the estimated cost.

JOSEPH W. SAVAGE,  
Secretary.

#### BOROUGH OF THE BRONX.

OFFICE OF THE PRESIDENT OF THE BOROUGH OF THE BRONX, MUNICIPAL BUILDING, CROTONA PARK, ONE HUNDRED AND SEVENTY-SEVENTH STREET AND THIRD AVENUE.

I HEREBY GIVE NOTICE THAT PETITIONS have been presented to me and are on file in my office for inspection, for

No. 35. Paving with sheet asphalt on a concrete foundation and setting curb where necessary, in East One Hundred and Sixty-second street, from Morris avenue to Sherman avenue.  
No. 36. Regulating, grading, setting curbstones and flagging sidewalks a space 4 feet wide, laying crosswalks, building approaches and erecting fences where necessary, in Eden avenue, from Morris avenue, at East One Hundred and Seventy-second street to East One Hundred and Seventy-fourth street.

No. 37. Laying out on the map of The City of New York a change of grade of all that portion of Spuyten Duyvil road lying southeasterly from the prolongation of the centre line of a so-called private right of way belonging to Isaac G. Johnson & Co., which divides Lot No. 660, Block 3402, and Lot No. 112, Block 3410, where said line as prolonged crosses Spuyten Duyvil road, and including that portion of Spuyten Duyvil road southeasterly from said line to the place where the centre line of the Spuyten Duyvil and

Port Morris Railroad Company crosses the said Spuyten Duyvil road in accordance with sketch.

No. 38. Laying out on the map of The City of New York an establishment of the grades of North street, between Jerome avenue and Aqueduct Avenue East, and intersecting avenues, between Evelyn place and West One Hundred and Eighty-fourth street.

No. 39. Laying out on the map of The City of New York change of line and reducing the width of Mount Vernon avenue, from its northern boundary line of dividing line between City of New York and City of Yonkers to Two Hundred and Thirty-third street, centre line to be about 20 feet to the west in order to make the necessity of acquiring private property on the east side of said avenue a minimum and thereby lightening the burden of assessment to the taxpayers.

The petitions for the above will be submitted by me to the Local Board having jurisdiction thereof on March 12, 1908, at 3 p. m., at the office of the President of the Borough of The Bronx, Municipal Building, Crotona Park, One Hundred and Seventy-seventh street and Third avenue.

Dated February 28, 1908.  
LOUIS F. HAFFEN,  
President of the Borough of The Bronx.  
f29,m2,9,12

OFFICE OF THE PRESIDENT OF THE BOROUGH OF THE BRONX, MUNICIPAL BUILDING, CROTONA PARK, ONE HUNDRED AND SEVENTY-SEVENTH STREET AND THIRD AVENUE.

I HEREBY GIVE NOTICE THAT A PETITION has been presented to me and is on file in my office for inspection, for

No. 34. Regulating and grading, setting curbstones and flagging sidewalks a space 4 feet wide, laying crosswalks, building approaches and erecting fences where necessary, in Barry street, from Longwood avenue to Tiffany street.

The petition for the above will be submitted by me to the Local Board of Morrisania, Twenty-second District, on March 12, 1908, at 1 p. m., at the office of the President of the Borough of The Bronx, Municipal Building, Crotona Park, One Hundred and Seventy-seventh street and Third avenue.

Dated New York, February 28, 1908.  
LOUIS F. HAFFEN,  
President of the Borough of The Bronx.  
f29,m2,9,12

OFFICE OF THE PRESIDENT OF THE BOROUGH OF THE BRONX, MUNICIPAL BUILDING, CROTONA PARK, ONE HUNDRED AND SEVENTY-SEVENTH STREET AND THIRD AVENUE.

I HEREBY GIVE NOTICE THAT A PETITION has been presented to me, and is on file in my office for inspection, for

No. 41. Laying out and acquiring title to lands and premises for the extension of Montevue avenue, from East One Hundred and Seventy-ninth street to East One Hundred and Eighty-ninth street, in the Borough of The Bronx, City of New York.

The petition for the above will be presented by me to the Local Board of Crotona, Twenty-fourth District, on March 12, 1908, at 2 p. m., at the office of the President of the Borough of The Bronx, Municipal Building, Crotona Park, One Hundred and Seventy-seventh street and Third avenue.

Dated New York, February 28, 1908.  
LOUIS F. HAFFEN,  
President of the Borough of The Bronx.  
f29,m2,9,12

OFFICE OF THE PRESIDENT OF THE BOROUGH OF THE BRONX, MUNICIPAL BUILDING, CROTONA PARK, ONE HUNDRED AND SEVENTY-SEVENTH STREET AND THIRD AVENUE.

I HEREBY GIVE NOTICE THAT A PETITION has been presented to me, and is on file in my office for inspection, for

No. 40. Constructing a sewer and appurtenances in West One Hundred and Seventy-first street, between the Harlem River and Sedgwick avenue; and in Sedgwick avenue, between West One Hundred and Seventy-first street and Commerce avenue.

The petition for the above will be submitted by me to the Local Board of Van Cortlandt, Twenty-fifth District, on March 12, 1908, at 3 p. m., at the office of the President of the Borough of The Bronx, Municipal Building, One Hundred and Seventy-seventh street and Third avenue.

Dated New York, February 28, 1908.  
LOUIS F. HAFFEN,  
President of the Borough of The Bronx.  
f29,m2,9,12

OFFICE OF THE PRESIDENT OF THE BOROUGH OF THE BRONX, MUNICIPAL BUILDING, CROTONA PARK, ONE HUNDRED AND SEVENTY-SEVENTH STREET AND THIRD AVENUE.

SEALED BIDS OR ESTIMATES WILL BE received by the President of the Borough of The Bronx at the above office until 11 o'clock a. m. on

#### THURSDAY, MARCH 5, 1908.

No. 1. FOR FURNISHING AND DELIVERING LUMBER TO THE BUREAU OF HIGHWAYS.

The time allowed for the delivery of the supplies is during the year 1908.

The amount of security will be Twelve Hundred Dollars (\$1,200).

No. 2. FOR FURNISHING AND DELIVERING LUMBER FOR VIADUCTS AND BRIDGES, BUREAU OF HIGHWAYS.

The time allowed for the delivery of the supplies is during the year 1908.

The amount of security will be One Thousand Seven Hundred Dollars (\$1,700).

No. 3. FOR UNLOADING AND DELIVERING ASHES FURNISHED BY THE DEPARTMENT OF STREET CLEANING.

The time allowed for the delivery of the material and the performance of the contract is on or before July 31, 1908.

The amount of security will be Fifteen Hundred Dollars (\$1,500).

No. 4. FOR REGULATING, GRADING, BUILDING APPROACHES AND PLACING FENCES IN JOHNSON AVENUE, BETWEEN KAPPOCK STREET AND SPUYTEN DUYVIL ROAD AT WEST TWO HUNDRED AND TWENTY-SEVENTH STREET, AND IN SPUYTEN DUYVIL ROAD, BETWEEN JOHNSON AVENUE AT WEST TWO HUNDRED AND TWENTY-SEVENTH STREET AND WEST TWO HUNDRED AND THIRTIETH STREET.

The Engineer's estimate is as follows:

Item 1—9,000 cubic yards of earth excavation.

Item 2—7,500 cubic yards of rock excavation.

Item 3—25,000 cubic yards of filling.

Item 4—4,650 cubic yards of dry rubble masonry in retaining walls, culverts and gutters.

Item 5—150 cubic yards of concrete.

Item 6—300 linear feet of vitrified stoneware pipe, 12 inches in diameter.

Item 7—100 linear feet of vitrified stoneware pipe, 18 inches in diameter.

The time allowed for the completion of the work will be two hundred (200) working days.

The amount of security required will be Twelve Thousand Dollars (\$12,000).

No. 5. FOR REGULATING, GRADING, SETTING CURBSTONES, FLAGGING THE SIDEWALKS, LAYING CROSSWALKS, BUILDING APPROACHES AND PLACING FENCES IN MOSHOLU PARKWAY NORTH, FROM JEROME AVENUE TO GUN HILL ROAD.

The Engineer's estimate is as follows:  
Item 1—1,930 cubic yards of earth excavation.  
Item 2—4,000 cubic yards of rock excavation.  
Item 3—8,150 cubic yards of filling.  
Item 4—1,150 linear feet of new curbstone, furnished and set.  
Item 5—4,300 square feet of new flagging, furnished and laid.  
Item 6—250 square feet of new bridge stone for crosswalks, furnished and laid.  
Item 7—120 cubic yards of dry rubble masonry, in retaining walls, culverts and gutters.  
Item 8—10 linear feet of vitrified stoneware pipe, 12 inches in diameter.  
Item 9—750 linear feet of new guard rail in place.

The time allowed for the completion of the work will be one hundred and twenty-five (125) working days.  
The amount of security required will be Forty-five Hundred Dollars (\$4,500).

No. 6. FOR PAVING WITH ASPHALT BLOCKS ON A CONCRETE FOUNDATION THE ROADWAY OF JACKSON AVENUE, FROM EAST ONE HUNDRED AND FIFTY-EIGHTH STREET TO EAST ONE HUNDRED AND SIXTY-FIRST STREET, AND SETTING CURB WHERE NECESSARY.

The Engineer's estimate is as follows:  
Item 1—1,800 square yards of completed asphalt block pavement, and keeping the same in repair for five years from date of acceptance.  
Item 2—306 cubic yards of concrete, including mortar bed.  
Item 3—600 linear feet of new curbstone, furnished and set in concrete.  
Item 4—715 linear feet of old curbstone, re-jointed, recut on top and reset in concrete.

The time allowed for the completion of the work will be thirty (30) consecutive working days.  
The amount of security required will be Two Thousand Dollars (\$2,000).

No. 7. FOR PAVING THE ROADWAY OF EAST ONE HUNDRED AND FIFTY-EIGHTH STREET (CEDAR PLACE), FROM CAULDWELL AVENUE TO JACKSON AVENUE, AND FROM FOREST AVENUE TO UNION AVENUE, WITH ASPHALT BLOCKS ON A CONCRETE FOUNDATION, AND FROM JACKSON AVENUE TO FOREST AVENUE WITH GRANITE BLOCKS ON A CONCRETE FOUNDATION, AND SETTING CURB WHERE NECESSARY.

The Engineer's estimate is as follows:  
Item 1—2,580 square yards of completed asphalt block pavement, and keeping the same in repair for five years from date of acceptance.  
Item 2—525 cubic yards of concrete, including mortar bed.

Item 3—900 linear feet of new curbstone, furnished and set in concrete.  
Item 4—1,430 linear feet of old curbstone, re-jointed, recut on top and reset in concrete.  
Item 5—495 square yards of new granite block pavement on a concrete foundation, laid with paving cement joints, and keeping the same in repair for one year from date of acceptance.

The time allowed for the completion of the work will be forty (40) consecutive working days.  
The amount of security required will be Three Thousand Five Hundred Dollars (\$3,500).

No. 8. FOR PAVING WITH ASPHALT BLOCKS ON A CONCRETE FOUNDATION THE ROADWAY OF ST. MARY'S STREET, FROM ST. ANNS AVENUE TO ROBBINS AVENUE, AND SETTING CURB WHERE NECESSARY.

The Engineer's estimate is as follows:  
Item 1—4,710 square yards of completed asphalt block pavement, and keeping the same in repair for five years from date of acceptance.  
Item 2—763 cubic yards of concrete, including mortar bed.  
Item 3—800 linear feet of new curbstone, furnished and set in concrete.  
Item 4—1,900 linear feet of old curbstone, re-jointed, recut on top and reset in concrete.

The time allowed for the completion of the work will be forty (40) consecutive working days.  
The security required will be Five Thousand Dollars (\$5,000).

No. 9. FOR PAVING WITH ASPHALT BLOCKS ON A CONCRETE FOUNDATION THE ROADWAY OF EAST ONE HUNDRED AND FORTIETH STREET, FROM ST. ANNS AVENUE TO CYPRESS AVENUE, AND SETTING CURB WHERE NECESSARY.

The Engineer's estimate is as follows:  
Item 1—2,810 square yards of completed asphalt block pavement, and keeping the same in repair for five years from date of acceptance.  
Item 2—455 cubic yards of concrete, including mortar bed.  
Item 3—700 linear feet of new curbstone, furnished and set in concrete.  
Item 4—1,000 linear feet of old curbstone, re-jointed, recut on top and reset in concrete.

The time allowed for the completion of the work will be thirty (30) consecutive working days.  
The amount of security required will be Three Thousand Dollars (\$3,000).

No. 10. FOR REGULATING, GRADING, SETTING CURBSTONES, FLAGGING THE SIDEWALKS, LAYING CROSSWALKS, BUILDING APPROACHES AND PLACING FENCES IN BRIGGS AVENUE (GUN HILL ROAD), FROM WHITE PLAINS ROAD TO RAYCHESTER AVENUE, AT OR NEAR PELHAM BAY PARK.

The Engineer's estimate is as follows:  
Item 1—52,000 cubic yards of earth excavation.  
Item 2—31,000 cubic yards of rock excavation.  
Item 3—275,000 cubic yards of filling, exclusive of all material sinking below the surface of the marsh, as indicated on the plan.  
Item 3a—A lump sum bid for all material sinking below the surface of the marsh, as indicated on the plan.

Item 4—21,450 linear feet of new curbstone, furnished and set.  
Item 5—76,200 square feet of new flagging, furnished and laid.  
Item 6—23,500 square feet of new bridge stone for crosswalks, furnished and laid.

Item 7—1,500 cubic yards of dry rubble masonry in retaining walls, culverts and gutters.  
Item 8—200 cubic yards of rubble masonry in mortar.  
Item 9—10 cubic yards of brick masonry.

Item 10—400 cubic yards of concrete.  
Item 11—2,700 linear feet of vitrified stoneware pipe, 12 inches in diameter.  
Item 12—1,900 linear feet of vitrified stoneware pipe, 18 inches in diameter.  
Item 13—500 linear feet of vitrified stoneware pipe, 20 inches in diameter.  
Item 14—1,150 linear feet of vitrified stoneware pipe, 24 inches in diameter.  
Item 15—10,000 feet (B. M.) of lumber, furnished and laid.  
Item 16—30 drainage inlets, type "A."  
Item 17—50 drainage inlets, type "B."  
Item 18—3,000 linear feet of piles, driven and cut off.  
Item 19—3,000 pounds of steel rods in place.  
Item 20—3,000 pounds of cast iron in inlet frames and covers, in place.  
Item 21—1 tidegate, complete.  
Item 22—140 linear feet of reinforced concrete, 10 feet by 6 feet.  
Item 23—840 linear feet of reinforced concrete, 6 feet by 5 feet.

Item 24—13,500 linear feet of guard rails.  
The time allowed for the completion of the work will be five hundred (500) working days.  
The amount of security required will be One Hundred Thousand Dollars (\$100,000).

No. 11. FOR REGULATING AND REGRADING, SETTING CURBSTONES, FLAGGING THE SIDEWALKS AND LAYING CROSSWALKS IN EAST ONE HUNDRED AND SEVENTY-SIXTH STREET, FROM WEST FARMS ROAD TO BOSTON ROAD, AND PAVING THE ROADWAY THEREOF WITH GRANITE BLOCKS ON A SAND FOUNDATION.

The Engineer's estimate is as follows:  
Item 1—1,940 cubic yards of earth excavation.  
Item 2—1,160 cubic yards of rock excavation.  
Item 3—460 cubic yards of filling.  
Item 4—850 linear feet of new curbstone, furnished and set.

Item 5—600 linear feet of old curbstone, re-jointed and set.  
Item 6—3,460 square feet of new flagging, furnished and laid.  
Item 7—2,550 square feet of old flagging, re-jointed and relaid.  
Item 8—50 square feet of new bridge stone for crosswalks, furnished and laid.  
Item 9—1,300 square feet of old bridge stone, re-jointed and relaid.  
Item 10—10 cubic yards of dry rubble masonry in retaining walls, culverts and gutters.

Item 11—20 linear feet of vitrified stoneware pipe, 12 inches in diameter.  
Item 12—3,170 square yards of new granite block pavement on a sand foundation, laid with sand joints, and keeping the pavement in repair for one year from date of acceptance.

The time allowed for the completion of the work will be seventy-five (75) working days.  
The amount of security required will be Thirty-six Hundred Dollars (\$3,600).

No. 12. FOR REGULATING, GRADING, SETTING CURBSTONES, FLAGGING THE SIDEWALKS, LAYING CROSSWALKS, BUILDING APPROACHES AND PLACING FENCES IN EXTERIOR STREET, FROM EAST ONE HUNDRED AND FORTY-NINTH STREET TO JEROME AVENUE.

The Engineer's estimate is as follows:  
Item 1—1,450 cubic yards of excavation of all kinds.  
Item 2—57,600 cubic yards of filling, exclusive of all material sinking below the surface of the marsh, as indicated on the plan.

Item 3—6,670 linear feet of new curbstone, furnished and set.  
Item 4—26,340 square feet of new flagging, furnished and laid.  
Item 5—1,850 square feet of new bridge stone for crosswalks, furnished and laid.

Item 6—220 cubic yards of dry rubble masonry, in retaining walls, culverts and gutters.  
Item 7—100 linear feet of vitrified stoneware pipe, 12 inches in diameter.  
Item 8—1,000 feet (B. M.) of lumber, furnished and laid.  
Item 9—3,000 linear feet of new guard rail in place.  
Item 10—A lump sum bid for all material sinking below the surface of the marsh, as indicated on the plan.

The time allowed for the completion of the work will be three hundred (300) days.  
The amount of security required will be Eighteen Thousand Dollars (\$18,000).

No. 13. FOR REGULATING, GRADING, SETTING CURBSTONES, FLAGGING THE SIDEWALKS, LAYING CROSSWALKS, BUILDING APPROACHES AND PLACING FENCES IN CITY ISLAND AVENUE (MAIN STREET), FROM THE APPROACH TO THE BRIDGE 300 FEET NORTH OF ELIZABETH STREET TO THE LONG ISLAND SOUND AT THE SOUTHERLY END OF CITY ISLAND.

The Engineer's estimate is as follows:  
Item 1—6,200 cubic yards of earth excavation.  
Item 2—500 cubic yards of rock excavation.  
Item 3—60,800 cubic yards of filling.  
Item 4—13,700 linear feet of new curbstone, furnished and set.

Item 5—250 linear feet of old curbstone, re-jointed and reset.  
Item 6—50,200 square feet of new flagging, furnished and laid.  
Item 7—9,200 square feet of new bridge stone for crosswalks, furnished and laid.

Item 8—2,600 cubic yards of dry rubble masonry, in retaining walls, culverts and gutters.  
Item 9—100 cubic yards of rubble masonry, in mortar.  
Item 10—800 linear feet of vitrified stoneware pipe, 12 inches in diameter.  
Item 11—3,000 linear feet of vitrified stoneware pipe, 18 inches in diameter.  
Item 12—450 linear feet of vitrified stoneware pipe, 24 inches in diameter.

Item 13—1,000 feet (B. M.) of lumber, furnished and laid.  
Item 14—3,500 linear feet of new guard rail, taken up and reset.  
Item 15—105 linear feet of old iron fence, taken up and reset.  
Item 16—18 drainage inlets, type "A."  
Item 17—30 drainage inlets, type "B."

The time allowed for the completion of the work will be two hundred and fifty (250) working days.  
The amount of security required will be Thirty-five Thousand Dollars (\$35,000).

No. 14. FOR REBUILDING A PORTION OF THE SEWER IN WHITLOCK AVENUE, NEAR BANCROFT STREET.

The Engineer's estimate is as follows:  
Item 1—725 cubic yards of brick work, in place.  
Item 2—4,500 pounds of steel bars, ½-inch, furnished and in place.  
Item 3—120 pounds of steel bars, ¾-inch, furnished and in place.  
Item 4—1,540 pounds of steel I-beams, furnished and in place.

Item 5—15 square feet of wire netting, No. 14 gauge, mesh 2-inch by 1-inch, furnished and in place.  
Item 6—12 cubic yards of Class "A" concrete, in place.  
Item 7—10 cubic yards of Class "B" concrete, in place.  
Item 8—69 spurs for house connections, furnished and in place.  
Item 9—1 manhole, complete.  
Item 10—1 ventilator, complete.  
Item 11—1,000 feet (B. M.) of timber, furnished and laid, and sheeting furnished and left in place.  
Item 12—600 linear feet of 6-inch pipe as risers for house connections, including the supporting and surrounding Class "A" concrete.

The time allowed for the completion of the work will be two hundred (200) working days.  
The amount of security required will be Seven Thousand Five Hundred Dollars (\$7,500).  
No. 15. FOR REBUILDING A PORTION OF THE SEWER IN TIFFANY STREET, BETWEEN RANDALL AVENUE AND A POINT ABOUT 230 FEET NORTH THEREFROM.

The Engineer's estimate is as follows:  
Item 1—650 cubic yards of Class "A" concrete, in place.

(Rating to be based on speed and on ability to read back notes at once.)

The percentage required is 70.  
The salary is \$1,800 to \$3,000 per annum.  
One vacancy exists in the Municipal Court, Brooklyn, at a salary of \$2,000 per annum.  
The general dictation will be given at two rates of speed, viz.: 150 and 175 words a minute, the lower rate for the fourth grade, the higher for the fifth.

The second branch of the examination is taking notes of testimony, question and answer being read by different examiners and taken at such rate of speed as the candidate desires, providing that it is at a rate of not less than 150 words per minute, and then read back, no transcript of this part of the examination being called for.  
Candidates who wish to transcribe their notes on the typewriter should bring their own machines.  
The minimum age is 21 years.

F. A. SPENCER,  
Secretary.  
f10,m11

MUNICIPAL CIVIL SERVICE COMMISSION, No. 299  
BROADWAY, CITY OF NEW YORK.

**PUBLIC NOTICE WILL BE GIVEN OF** all competitive examinations two weeks in advance of the date upon which the receipt of applications for any scheduled examination will close. Applications will be received for only such examinations as are scheduled.

When an examination is advertised, a person desiring to compete in the same may obtain an application blank upon request made in writing or by personal application at the office of the Commission.

All notices of examinations will be posted in the office of the Commission, City Hall, Municipal Building, Brooklyn, and advertised in the City Record for two weeks in advance of the date upon which the receipt of applications will close for any stated position.

Public notice will also be given by advertisement in most of the City papers.

Wherever an examination is of a technical character, due notice is given by advertisement in the technical journals appertaining to the particular profession for which the examination is called.

Such notices will be sent to the daily papers as matters of news, and to the General Post-office and stations thereof. The scope of the examination will be stated, but for more general information application should be made at the office of the Commission.

Unless otherwise specifically stated, the minimum age requirement for all positions is 21.

FRANK L. POLK,

President;

R. ROSS APPLETON,

ARTHUR J. O'KEEFE,

Commissioners.

FRANK A. SPENCER,  
Secretary.

## DEPARTMENT OF CORRECTION.

f27,m9

**See General Instructions to Bidders on the last page, last column, of the "City Record."**

## BOARD OF ASSESSORS.

**PUBLIC NOTICE IS HEREBY GIVEN TO** the owner or owners of all houses and lots, improved or unimproved lands affected thereby, that the following proposed assessments have been completed and are lodged in the office of the Board of Assessors for examination by all persons interested, viz:

## BOROUGH OF THE BRONX.

List 9447, No. 1. Sewer and appurtenances in East One Hundred and Thirty-eighth street, between Gerard avenue and Walton avenue.

## BOROUGH OF QUEENS.

List 9455, No. 2. Recurbing and paving with asphalt pavement Jamaica avenue, from Boulevard to Steinway avenue.

List 9473, No. 3. Regulating, grading, curbing and laying crosswalks in Sixth avenue, from Jackson avenue to Graham avenue.

List 9493, No. 4. Regulating, grading, curbing, flagging and laying crosswalks in Ninth avenue, from Grand avenue to Flushing avenue.

List 9567, No. 5. Sewer in Hallett street, between Flushing and Hoyt avenues.

List 9568, No. 6. Sewer in North Henry street, between Flushing and Newtown avenues.

The limits within which it is proposed to lay the said assessments include all the several houses and lots of ground, vacant lots, pieces and parcels of land situated on—

No. 1. North side of One Hundred and Thirty-eighth street, from Gerard to Walton avenue.

No. 2. Both sides of Jamaica avenue, from Boulevard to Steinway avenue, and to the extent of half the block at the intersecting streets and avenues.

No. 3. Both sides of Sixth avenue, from Graham avenue to Jackson avenue, and to the extent of half the block at the intersecting streets and avenues.

No. 4. Both sides of Ninth avenue, from Grand avenue to Flushing avenue, and to the extent of half the block at the intersecting streets and avenues.

No. 5. Both sides of Hallett street, from Hoyt avenue to Flushing avenue.

No. 6. Both sides of North Henry street, from Newtown avenue to Flushing avenue.

All persons whose interests are affected by the above-named proposed assessments, and who are opposed to the same, or either of them, are requested to present their objections, in writing, to the Secretary of the Board of Assessors, No. 320 Broadway, New York, on or before March 31, 1908, at 11 a. m., at which time and place the said objections will be heard and testimony received in reference thereto.

ANTONIO ZUCCA,

PAUL WEIMANN,

JAMES H. KENNEDY,

Board of Assessors.

WILLIAM H. JASPER,

Secretary.

No. 320 Broadway.

City of New York, Borough of Manhattan.

February 27, 1908.

f27,m9

**PUBLIC NOTICE IS HEREBY GIVEN TO** the owner or owners of all houses and lots, improved or unimproved lands affected thereby, that the following proposed assessments have been completed and are lodged in the office of the Board of Assessors for examination by all persons interested, viz:

## Borough of Manhattan.

List 9426, No. 1. Alteration and improvement to sewer in Thirty-ninth street, between the Hudson River and Eleventh avenue, and new outlet sewer under the pier at the foot of Thirty-ninth street.

## Borough of The Bronx.

List 9449, No. 2. Regulating, grading, curbing, flagging, laying crosswalks, building approaches and erecting fences in Kelly street, between Westchester avenue and Intervale avenue, north of One Hundred and Sixty-seventh street.

List 9450, No. 3. Regulating, grading, curbing, flagging, laying crosswalks, building approaches and erecting fences in Depot Square South, from Webster avenue to Depot Square East; in Depot Square East, from Depot Square South to Depot Square North, and in Depot Square North, from Depot Square East to Webster avenue.

List 9452, No. 4. Regulating, grading, curbing and flagging, laying crosswalks, building approaches and erecting fences in One Hundred and Sixty-second street, from Ogden avenue to Woodcrest avenue.

List 9575, No. 5. Paving with asphalt blocks on a concrete foundation East One Hundred and Fifty-sixth street, from Beck street to the Southern boulevard.

## Borough of Queens.

List 9423, No. 6. Regulating, grading, curbing and flagging Vandewater avenue, from Sixth avenue to Tenth avenue, together with a list of awards for damages caused by a change of grade.

List 9570, No. 7. Sewer in Academy street, from Broadway to Jamaica avenue.

## Borough of Richmond.

List 9443, No. 8. ## DEPARTMENT OF HEALTH.

DEPARTMENT OF HEALTH, CORNER OF FIFTY-FIFTH STREET AND SIXTH AVENUE, BOROUGH OF MANHATTAN, CITY OF NEW YORK, February 24, 1908.

AT A MEETING OF THE BOARD OF Health of the Department of Health, held February 19, 1908, the following resolution was adopted:

Resolved, That section 183 of the Sanitary Code be and the same is hereby amended so as to read as follows:

Section 183. It shall be the duty of all persons having in their possession bottles, cans or other receptacles containing milk or cream, which are used in the transportation and delivery of milk or cream, to clean or cause them to be cleaned immediately upon emptying.

No person shall use or cause or allow to be used any receptacle which is used in the transportation and delivery of milk or cream for any purpose whatsoever other than the holding of milk or cream; nor shall any person receive or have in his possession any such receptacle which has not been washed after holding milk or cream or which is unclean in any way.

A true copy.  
EUGENE W. SCHEFFER,  
Secretary.

## DEPARTMENT OF FINANCE.

### NOTICE OF ASSESSMENTS FOR OPENING STREETS AND PARKS.

IN PURSUANCE OF SECTION 1005 OF the Greater New York Charter, the Comptroller of The City of New York hereby gives public notice of the confirmation by the Supreme Court and the entering in the Bureau for the Collection of Assessments and Arrears of the assessments for OPENING AND ACQUIRING TITLE to the following named streets in the BOROUGH OF THE BRONX:

#### TWENTY-THIRD WARD, SECTION 10.

FOX STREET—OPENING, from Prospect avenue to Leggett avenue. Confirmed December 30, 1907; entered February 26, 1908. Area of assessment includes all those lands, tenements and hereditaments and premises situate, lying and being in the Borough of The Bronx, in The City of New York, which, taken together, are bounded and described as follows, viz.:

Beginning at the point of intersection of a line parallel to the northwesterly side of Wales avenue and distant 100 feet northwesterly therefrom with a line parallel to and distant 100 feet southwesterly from the southerly side of East One Hundred and Forty-ninth street; running thence easterly along the last-mentioned parallel line to its intersection with a line parallel to and distant 100 feet southerly from the southerly side of the Southern boulevard; thence easterly and northwesterly along the last-mentioned parallel line and its continuation northwesterly parallel to and distant 100 feet southerly from the southerly side of the Southern boulevard to its intersection with a line parallel to and distant 100 feet northwesterly from the northwesterly side of Longwood avenue; thence northwesterly along the last-mentioned parallel line to its intersection with a line parallel to and distant 100 feet northwesterly from the northwesterly side of Fox street; thence southwesterly and westerly along the last-mentioned parallel line to its intersection with a line parallel to and distant 100 feet northwesterly from the northwesterly side of Wales avenue; thence southerly along the last-mentioned parallel line to the point or place of beginning.

#### TWENTY-FOURTH WARD, SECTION 12.

EAST ONE HUNDRED AND NINETY-SEVENTH STREET—OPENING, from Bainbridge avenue to Creston avenue. Confirmed December 30, 1907; entered February 26, 1908. Area of assessment includes all those lands, tenements and hereditaments and premises situate, lying and being in the Borough of The Bronx, in The City of New York, which, taken together, are bounded and described as follows, viz.:

Beginning at the point of intersection of the westerly prolongation of the middle line of the block between East One Hundred and Ninety-sixth street and East One Hundred and Ninety-seventh street with a line parallel to and distant 100 feet westerly from the westerly side of Creston avenue; running thence northwesterly along the last-mentioned parallel line to the southerly side of East One Hundred and Ninety-eighth street; thence easterly along the southerly side of East One Hundred and Ninety-eighth street to its intersection with a line parallel to and distant 100 feet easterly from the easterly side of Bainbridge avenue; thence southerly along the last-mentioned parallel line to its intersection with the easterly prolongation of the middle line of the block between East One Hundred and Ninety-sixth street and East One Hundred and Ninety-seventh street; thence westerly along the last-mentioned easterly prolongation and middle line of the block and its prolongation westwardly to the point or place of beginning.

The above entitled assessments were entered on the day hereinafter given in the Record of Titles of Assessments, kept in the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, and unless the amount assessed for benefit on any person or property shall be paid within sixty days after the date of said entry of the assessment interest will be collected thereon, as provided in section 1006 of the Greater New York Charter.

Said section provides that "If any such assessment shall remain unpaid for the period of sixty days after the date of entry thereof in the said Record of Titles of Assessments, it shall be the duty of the officer authorized to collect and receive the amount of such assessment to charge, collect and receive interest thereon at the rate of seven per centum per annum, to be calculated to the date of payment from the date when such assessment became a lien, as provided by section 159 of this act."

Section 159 of this act provides "An assessment shall become a lien upon the real estate affected thereby ten days after its entry in the said record."

The above assessments are payable to the Collector of Assessments and Arrears at the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, in the Municipal Building, corner of One Hundred and Seventy-seventh street and Third avenue, Borough of The Bronx, between the hours of 9 a. m. and 2 p. m., and on Saturdays from 9 a. m. to 12 m., and all payments made thereon on or before April 27, 1908, will be exempt from interest, as above provided, and after that date will be subject to a charge of interest at the rate of seven per centum per annum from the date when above assessments became liens to the date of payment.

HERMAN A. METZ,

Comptroller.  
City of New York, Department of Finance,  
Comptroller's Office, February 26, 1908.  
f28,m12

### NOTICE TO PROPERTY OWNERS.

### NOTICES OF ASSESSMENTS FOR OPENING STREETS AND PARKS.

IN PURSUANCE OF SECTION 1005 OF the Greater New York Charter, the Comptroller of The City of New York hereby gives public notice of the confirmation by the Supreme Court and the entering in the Bureau for the Collection of Assessments and Arrears of the assessments for OPENING AND ACQUIRING TITLE to the following named avenues in the BOROUGH OF BROOKLYN:

#### TWENTY-SIXTH WARD, SECTIONS 12 AND 14.

WILLIAMS AVENUE—OPENING, from Livonia avenue to Fresh Creek. Confirmed December 30, 1907; entered February 26, 1908. Area of assessment includes all those lands, tenements and hereditaments and premises situate, lying and being in the Borough of Brooklyn, in The City of New York, which, taken together, are bounded and described as follows, viz.:

On the north by the southerly side of Livonia avenue; on the east by a line drawn parallel to the easterly side of Williams avenue and distant 200 feet easterly therefrom; on the

south by the bulkhead line of Fresh Creek basin, and on the west by a line drawn parallel to and distant 200 feet westerly of the westerly side of Williams avenue.

#### THIRTY-FIRST WARD, SECTION 21.

AVENUE T—OPENING, from Coney Island avenue to Ocean parkway. Confirmed December 13, 1907; entered February 26, 1908. Area of assessment includes all those lands, tenements and hereditaments and premises situate, lying and being in the Borough of Brooklyn, in The City of New York, which, taken together, are bounded and described as follows, viz.:

Beginning at a point on the easterly side of Ocean parkway where the same is intersected by the centre line of the block between Avenue T and Avenue S; running thence easterly and along the centre line of the blocks between Avenue T and Avenue S to the westerly side of Coney Island avenue; running thence southerly and along the westerly side of Coney Island avenue to the centre line of the block between Avenue T and Avenue U; running thence westerly and along the centre line of the blocks between Avenue T and Avenue U to the easterly side of Ocean parkway; running thence northwesterly and along the easterly side of Ocean parkway to the point or place of beginning.

The above entitled assessments were entered on the day hereinafter given in the Record of Titles of Assessments, kept in the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, and unless the amount assessed for benefit on any person or property shall be paid within sixty days after the date of entry of the assessment, interest will be collected thereon, as provided in section 1006 of the Greater New York Charter.

Said section provides, in part, that "If any such assessment shall remain unpaid for the period of sixty days after the date of entry thereof in the said Record of Titles of Assessments, it shall be the duty of the officer authorized to collect and receive the amount of such assessment to charge, collect and receive interest thereon at the rate of seven per centum per annum, to be calculated to the date of payment from the date when such assessment became a lien, as provided by section 159 of this act."

Section 159 of this act provides "An assessment shall become a lien upon the real estate affected thereby ten days after its entry in the said record."

The above assessments are payable to the Collector of Assessments and Arrears, at the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, in the Mechanics' Bank Building, Court and Montague streets, Borough of Brooklyn, between the hours of 9 a. m. and 2 p. m., and on Saturdays from 9 a. m. to 12 m., and all payments made thereon on or before April 27, 1908, will be exempt from interest, as above provided, and after that date will be subject to a charge of interest at the rate of seven per centum per annum from the date when such assessments became liens to the date of payment.

HERMAN A. METZ,

Comptroller.  
City of New York, Department of Finance,  
Comptroller's Office, February 26, 1908.  
f28,m12

### NOTICE TO PROPERTY OWNERS.

IN PURSUANCE OF SECTION 1018 OF the Greater New York Charter, the Comptroller of The City of New York hereby gives public notice to all persons, owners of property, affected by the following assessment for LOCAL IMPROVEMENTS in the BOROUGH OF RICHMOND:

#### FIRST WARD.

REGULATING, GRADING AND PAVING THE ROADWAY OF COLLEGE AVENUE, from Jewett avenue to the second proposed street east; WATERS AVENUE, from Livermore avenue to Jewett avenue, and WILLARD AVENUE, from Watchogue road to Indiana avenue. Area of assessment: Both sides of Waters avenue, from Jewett avenue to Livermore avenue; both sides of Willard avenue, from Watchogue road to Indiana avenue; both sides of College avenue, from Jewett avenue to the second proposed street east, and to the extent of half the block at the intersecting streets and avenues.

—that the same was confirmed by the Board of Assessors February 25, 1908, and entered on February 25, 1908, in the Record of Titles of Assessments, kept in the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, and unless the amount assessed for benefit on any person or property shall be paid within sixty days after the date of said entry of the assessment, interest shall be collected thereon, as provided in section 1019 of said Greater New York Charter.

Said section provides that "If any such assessment shall remain unpaid for the period of sixty days after the date of entry thereof on the said Record of Titles of Assessments, it shall be the duty of the officer authorized to collect and receive the amount of such assessment to charge, collect and receive interest thereon at the rate of seven per centum per annum, to be calculated to the date of payment from the date when such assessment became a lien, as provided by section 159 of this act."

Section 159 of this act provides "An assessment shall become a lien upon the real estate affected thereby ten days after its entry in the said record."

The above assessment is payable to the Collector of Assessments and Arrears at the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, at Borough Hall, St. George, Borough of Richmond, between the hours of 9 a. m. and 2 p. m., and on Saturdays from 9 a. m. to 12 m., and all payments made thereon on or before April 25, 1908, will be exempt from interest, as above provided, and after that date will be subject to a charge of interest at the rate of seven per centum per annum from the date when above assessment became a lien to the date of payment.

HERMAN A. METZ,

Comptroller.  
City of New York, Department of Finance,  
Comptroller's Office, February 25, 1908.  
f27,m11

### NOTICE TO PROPERTY OWNERS.

IN PURSUANCE OF SECTION 1018 OF the Greater New York Charter, the Comptroller of The City of New York hereby gives public notice to all persons, owners of property, affected by the following assessment for LOCAL IMPROVEMENTS in the BOROUGH OF MANHATTAN:

#### TWELFTH WARD, SECTION 7.

WEST ONE HUNDRED AND TWENTIETH STREET—PAVING, CURBING AND RECURBING, between Amsterdam avenue and Morningside Avenue West. Area of assessment: Both sides of One Hundred and Twentieth street, from Amsterdam avenue to Morningside Avenue

West, and to the extent of half the block at the intersecting streets and avenues.

—that the same was confirmed by the Board of Assessors on February 25, 1908, and entered on February 25, 1908, in the Record of Titles of Assessments, kept in the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, and unless the amount assessed for benefit on any person or property shall be paid within sixty days after the date of said entry of the assessment, interest will be collected thereon, as provided in section 1019 of said Greater New York Charter.

Said section provides, in part, that "If any such assessment shall remain unpaid for the period of sixty days after the date of entry thereof in the said Record of Titles of Assessments, it shall be the duty of the officer authorized to collect and receive the amount of such assessment to charge, collect and receive interest thereon at the rate of seven per centum per annum, to be calculated to the date of payment from the date when such assessment became a lien, as provided by section 159 of this act."

Section 159 of this act provides "An assessment shall become a lien upon the real estate affected thereby ten days after its entry in the said record."

The above assessment is payable to the Collector of Assessments and Arrears at the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, Room H, No. 280 Broadway, Borough of Manhattan, between the hours of 9 a. m. and 2 p. m., and on Saturdays from 9 a. m. to 12 m., and all payments made thereon on or before April 25, 1908, will be exempt from interest, as above provided, and after that date will be subject to a charge of interest at the rate of seven per centum per annum from the date when above assessment became a lien to the date of payment.

HERMAN A. METZ,

Comptroller.  
City of New York, Department of Finance,  
Comptroller's Office, February 25, 1908.

### NOTICE TO PROPERTY OWNERS.

IN PURSUANCE OF SECTION 1018 OF THE Greater New York Charter, the Comptroller of The City of New York hereby gives public notice to all persons, owners of property, affected by the following assessment for LOCAL IMPROVEMENTS in the BOROUGH OF THE BRONX:

#### TWENTY-THIRD WARD, SECTION 9.

ONE HUNDRED AND FORTY-NINTH STREET AND WALTON AVENUE—RECEIVING BASINS and appurtenances, at the northeast, southeast, southwest and northwest corners. Area of assessment: Both sides of Walton avenue, from One Hundred and Forty-sixth to One Hundred and Fiftieth street; west side of Mott avenue, between One Hundred and Forty-sixth street and One Hundred and Fiftieth street.

—that the same was confirmed by the Board of Assessors on February 25, 1908, and entered on February 25, 1908, in the Record of Titles of Assessments kept in the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, and unless the amount assessed for benefit on any person or property shall be paid within sixty days after the date of said entry of the assessment, interest will be collected thereon, as provided in section 1019 of the Greater New York Charter.

Said section provides, in part, that "If any such assessment shall remain unpaid for the period of sixty days after the date of entry thereof in the said Record of Titles of Assessments, it shall be the duty of the officer authorized to collect and receive the amount of such assessment to charge, collect and receive interest thereon at the rate of seven per centum per annum, to be calculated to the date of payment from the date when such assessment became a lien, as provided by section 159 of this act."

Section 159 of this act provides "An assessment shall become a lien upon the real estate affected thereby ten days after its entry in the said record."

The above assessment is payable to the Collector of Assessments and Arrears at the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, in the Municipal Building, corner of One Hundred and Seventy-seventh street and Third avenue, Borough of The Bronx, between the hours of 9 a. m. and 2 p. m., and on Saturdays from 9 a. m. to 12 m., and all payments made thereon on or before April 25, 1908, will be exempt from interest, as above provided, and after that date will be subject to a charge of interest at the rate of seven per centum per annum from the date when the above assessment became a lien to the date of payment.

HERMAN A. METZ,

Comptroller.  
City of New York, Department of Finance,  
Comptroller's Office, February 25, 1908.  
f27,m11

### NOTICE TO PROPERTY OWNERS.

IN PURSUANCE OF SECTION 1018 OF the Greater New York Charter, the Comptroller of The City of New York hereby gives public notice to all persons, owners of property, affected by the following assessments for LOCAL IMPROVEMENTS in the BOROUGH OF QUEENS:

#### FIRST WARD.

DITMAS AVENUE AND ELEVENTH AVENUE—CONSTRUCTING CATCH BASINS on the southeast corner. Area of assessment: South side of Eleventh avenue, from Potter avenue to Ditmas avenue, and east side of Potter avenue, between Sound street and Eleventh avenue.

—that the same was confirmed by the Board of Assessors on February 25, 1908, and entered on February 25, 1908, in the Record of Titles of Assessments, kept in the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, and unless the amount assessed for benefit on any person or property shall be paid within sixty days after the date of said entry of the assessment, interest will be collected thereon, as provided in section 1019 of said Greater New York Charter.

Said section provides, in part, that "If any such assessment shall remain unpaid for the period of sixty days after the date of entry thereof in the said Record of Titles of Assessments it shall be the duty of the officer authorized to collect and receive the amount of such assessment to charge, collect and receive interest thereon at the rate of seven per centum per annum, to be calculated to the date of payment from the date when such assessment became a lien, as provided by section 159 of this act."

Section 159 of this act provides "An assessment shall become a lien upon the real estate affected thereby ten days after its entry in the said record."

The above assessment is payable to the Collector of Assessments and Arrears at the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, at the Hackett Building, No. 51 Jackson avenue, Long Island City, Borough of Queens, between the hours of 9 a. m. and 2 p. m., and on Saturdays from 9 a. m. until 12 m., and all payments made thereon on or before April 25, 1908, will be exempt from interest, as above provided, and after that date will be subject to a charge of interest at the rate of seven per centum per annum from the date when above assessment became a lien to the date of payment.

#### NOTICE OF ASSESSMENTS FOR OPENING STREETS AND PARKS.

IN PURSUANCE OF SECTION 1005 OF THE Greater New York Charter, the Comptroller of The City of New York hereby gives public notice of the confirmation by the Supreme Court, and the entering in the Bureau for the Collection of Assessments and Arrears of the assessment for OPENING AND ACQUIRING TITLE to the following named avenue in the BOROUGH OF THE BRONX:

#### TWENTY-THIRD AND TWENTY-FOURTH WARDS, SECTIONS 9 AND 11.

COLLEGE AVENUE—OPENING, from East One Hundred and Sixty-fourth street to East One Hundred and Seventy-second street and Teller avenue. Confirmed January 25, 1908; entered February 21, 1908. Area of assessment includes all those lands, tenements and hereditaments and premises situate, lying and being in the Borough of The Bronx in The City of New York, which, taken together, are bounded and described as follows, viz.:

Beginning at the point of intersection of a line parallel to and distant one hundred feet easterly from the easterly line of Teller avenue with a line parallel to and distant one hundred feet southerly from the southerly line of East One Hundred and Sixty-fourth street; running thence westerly along said last mentioned parallel line to its intersection with the middle line of the blocks between Grant avenue and Sherman avenue; thence northerly along said middle line and its northerly prolongation to its intersection with the easterly line of Sheridan avenue; thence still northerly along the easterly line of Sheridan avenue and its northerly prolongation to its intersection with a line parallel to and one hundred feet northerly from the northerly line of Belmont street; thence easterly along said parallel line to its intersection with a line parallel to and distant two hundred feet easterly from the easterly line of Teller avenue; thence southerly along said parallel line to its intersection with the northerly line of East One Hundred and Seventieth street; thence southerly to the point of intersection of the southerly line of East One Hundred and Seventieth street with a line parallel to and distant one hundred feet easterly from the easterly line of Teller avenue; thence still southerly along said last mentioned parallel line to the point or place of beginning.

The above entitled assessment was entered on the date hereinbefore given in the Record of Titles of Assessments, kept in the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents. Unless the amount assessed for benefit on any person or property shall be paid within sixty days after the date of said entry of the assessment interest will be collected thereon, as provided in section 1006 of the Greater New York Charter.

Said section provides that "If any such assessment shall remain unpaid for the period of sixty days after the date of entry thereof in the said Record of Titles of Assessments, it shall be the duty of the officer authorized to collect and receive the amount of such assessment to charge, collect and receive interest thereon at the rate of seven per centum per annum, to be calculated to the date of payment from the date when such assessment became a lien, as provided by section 159 of this act."

Section 159 of this act provides "An assessment shall become a lien upon the real estate affected thereby ten days after its entry in the said record." The above assessment is payable to the Collector of Assessments and Arrears at the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, in the Municipal Building, corner of One Hundred and Seventy-seventh street and Third avenue, Borough of The Bronx, between the hours of 9 a. m. and 2 p. m., and on Saturdays from 9 a. m. to 12 m.; and all payments made thereon on or before April 21, 1908, will be exempt from interest, as above provided, and after that date will be subject to a charge of interest at the rate of seven per centum per annum from the date when above assessment became a lien to the date of payment.

HERMAN A. METZ,  
Comptroller.  
City of New York, Department of Finance,  
Comptroller's Office, February 21, 1908.

#### NOTICE OF ASSESSMENTS FOR OPENING STREETS AND PARKS.

IN PURSUANCE OF SECTION 1005 OF THE Greater New York Charter, the Comptroller of The City of New York hereby gives public notice of the confirmation by the Supreme Court and the entering in the Bureau for the Collection of Assessments and Arrears of the assessment for OPENING AND ACQUIRING TITLE to the following named street in the BOROUGH OF QUEENS:

#### FIRST WARD.

PURDY STREET—OPENING, from Flushing avenue to Riker avenue. Confirmed April 30, 1907; entered February 21, 1908. Area of assessment includes all those lands, tenements and hereditaments and premises situate, lying and being in the Borough of Queens, in The City of New York, which, taken together, are bounded and described as follows, viz.:

Beginning at the point of intersection of the northerly line of Flushing avenue with the middle line of the blocks between Fifteenth (Lyster street) avenue and Purdy street; running thence northerly along said middle line to its intersection with the southerly line of Riker avenue; thence westerly along the southerly line of Riker avenue to its intersection with the middle line of the blocks between Purdy street and Theodore street; thence southerly along the last mentioned middle line of the blocks to its intersection with the northerly line of Flushing avenue; thence easterly along said northerly line of Flushing avenue to the point or place of beginning.

The above entitled assessment was entered on the date hereinbefore given in the Record of Titles of Assessments, kept in the Bureau for the Collection of Assessments and Arrears of

Taxes and Assessments and of Water Rents. Unless the amount assessed for benefit on any person or property shall be paid within sixty days after the date of said entry of the assessment, interest will be collected thereon, as provided in section 1016 of the Greater New York Charter.

Said section provides that "If any such assessment shall remain unpaid for the period of sixty days after the date of entry thereof in the said Record of Titles of Assessments, it shall be the duty of the officer authorized to collect and receive the amount of such assessment to charge, collect and receive interest thereon at the rate of seven per centum per annum, to be calculated to the date of payment from the date when such assessment became a lien, as provided by section 159 of this act."

Section 159 of this act provides "An assessment shall become a lien upon the real estate affected thereby ten days after its entry in the said record."

The above assessment is payable to the Collector of Assessments and Arrears at the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, at the Hackett Building, No. 51 Jackson avenue, Long Island City, Borough of Queens, between the hours of 9 a. m. and 2 p. m., and on Saturdays from 9 a. m. until 12 m., and all payments made thereon on or before April 21, 1908, will be exempt from interest, as above provided, and after that date will be subject to a charge of interest at the rate of seven per centum per annum from the date when above assessment became a lien to the date of payment.

#### NOTICE TO PROPERTY OWNERS.

IN PURSUANCE OF SECTION 1018 OF THE Greater New York Charter, the Comptroller of The City of New York hereby gives public notice to all persons, owners of property, affected by the following assessment for LOCAL IMPROVEMENTS in the BOROUGH OF QUEENS:

#### FIRST WARD.

POMEROY STREET—GRADING, PAVING, CURBING AND RECURBING, from Broadway to Jamaica avenue. Area of assessment: Both sides of Pomerooy street, from Broadway to Jamaica avenue, and to the extent of half the block at the intersecting streets and avenues.

—that the same was confirmed by the Board of Revision of Assessments on February 20, 1908, and entered on February 20, 1908, in the Record of Titles of Assessments, kept in the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, and unless the amount assessed for benefit on any person or property shall be paid within sixty days after the date of said entry of the assessment, interest will be collected thereon, as provided in section 1019 of said Greater New York Charter.

Said section provides, in part, that "If any such assessment shall remain unpaid for the period of sixty days after the date of entry thereof in the said Record of Titles of Assessments, it shall be the duty of the officer authorized to collect and receive the amount of such assessment to charge, collect and receive interest thereon at the rate of seven per centum per annum, to be calculated to the date of payment from the date when such assessment became a lien, as provided by section 159 of this act."

Section 159 of this act provides "An assessment shall become a lien upon the real estate affected thereby ten days after its entry in the said record."

The above assessment is payable to the Collector of Assessments and Arrears at the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, at the Hackett Building, No. 51 Jackson avenue, Long Island City, Borough of Queens, between the hours of 9 a. m. and 2 p. m., and on Saturdays from 9 a. m. until 12 m., and all payments made thereon on or before April 20, 1908, will be exempt from interest, as above provided, and after that date will be subject to a charge of interest at the rate of seven per centum per annum from the date when above assessment became a lien to the date of payment.

#### NOTICE TO PROPERTY OWNERS.

IN PURSUANCE OF SECTION 1018 OF THE Greater New York Charter, the Comptroller of The City of New York hereby gives public notice to all persons, owners of property, affected by the following assessment for LOCAL IMPROVEMENTS in the BOROUGH OF THE BRONX:

#### TWENTY-THIRD WARD, SECTION 10.

TRINITY AVENUE—REGULATING, GRADING, CURBING, FLAGGING, LAYING CROSSWALKS, BUILDING APPROACHES AND PLACING FENCES, from Westchester avenue to Dater street. Area of assessment: Both sides of Trinity avenue, from Westchester avenue to Dater street, and to the extent of half the block at the intersecting streets and avenues.

#### TWENTY-FOURTH WARD, SECTIONS 11 AND 12.

CRESTON AVENUE—REGULATING, GRADING, CURBING, FLAGGING, LAYING CROSSWALKS, BUILDING APPROACHES AND PLACING FENCES, from East One Hundred and Eighty-fourth street to Minerva place. Area of assessment: Both sides of Creston avenue, from East One Hundred and Eighty-fourth street to Minerva place, and to the extent of half the block at the intersecting streets and avenues.

#### TWENTY-FOURTH WARD, SECTION 12.

EAST TWO HUNDRED AND FIFTH STREET—REGULATING, GRADING, CURBING, FLAGGING, LAYING CROSSWALKS, PLACING FENCES AND BUILDING APPROACHES, from Moshulu parkway to Jerome avenue. Area of assessment: Both sides of East Two Hundred and Fifth street, from Moshulu parkway to Jerome avenue, and to the extent of half the block at the intersecting streets and avenues.

—that the same was confirmed by the Board of Revision of Assessments on February 20, 1908, and entered February 20, 1908, in the Record of Titles of Assessments, kept in the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, and unless the amount assessed for benefit on any person or property shall be paid within sixty days after the date of said entry of the assessment, interest will be collected thereon, as provided in section 1019 of said Greater New York Charter.

Said section provides, in part, that "If any such assessment shall remain unpaid for the period of sixty days after the date of entry thereof in the said Record of Titles and Assessments, it shall be the duty of the officer authorized to collect and receive the amount of such assessment to charge, collect and receive interest thereon at the rate of seven per centum per annum, to be calculated to the date of payment from the date when such assessment became a lien, as provided by section 159 of this act."

Section 159 of this act provides "An assessment shall become a lien upon the real estate affected thereby ten days after its entry in the said record."

The above assessments are payable to the Collector of Assessments and Arrears at the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, in the Municipal Building, corner of One Hundred and Seventy-seventh street and Third avenue, Borough of The Bronx, between the hours of 9 a. m. and 2 p. m., and on Saturdays from 9 a. m. to 12 m., and all payments made thereon on or before April 20, 1908, will be exempt from interest, as above provided, and after that date will be subject to a charge of interest at the rate of seven per centum per annum from the date when the above assessments became liens to the date of payment.

#### NOTICE TO PROPERTY OWNERS.

IN PURSUANCE OF SECTION 1018 OF THE Greater New York Charter, the Comptroller of The City of New York hereby gives public notice to all persons, owners of property, affected by the following assessments for LOCAL IMPROVEMENTS in the BOROUGH OF BROOKLYN:

#### TWENTY-NINTH WARD, SECTION 16, AND THIRTY-FIRST WARD, SECTION 20.

CONEY ISLAND AVENUE—REGULATING, GRADING, CURBING AND LAYING SIDEWALKS, from 170 feet south of plaza at Fort Hamilton avenue to Kings highway. Area of assessment: Both sides of Coney Island avenue, from 170 feet south of plaza at Fort Hamilton avenue to Kings highway, and to the extent of half the block at the intersecting streets and avenues.

THIRTIETH WARD, SECTION 18. SEVENTY-FOURTH STREET—REGULATING, GRADING, CURBING, GUTTERING AND LAYING CEMENT SIDEWALKS, between Second and Seventh avenues. Area of assessment: Both sides of Seventy-fourth street, from Second to Seventh avenue, and to the extent of half the block at the intersecting streets and avenues.

—that the same were confirmed by the Board of Revision of Assessments February 20, 1908, and entered February 20, 1908, in the Record of Titles of Assessments, kept in the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, and unless the amount assessed for benefit on any person or property shall be paid within sixty days after the date of said entry of the assessment, interest will be collected thereon, as provided in section 1019 of said Greater New York Charter.

Said section provides, in part, that "If any such assessment shall remain unpaid for the period of sixty days after the date of entry thereof in the said Record of Titles of Assessments, it shall be the duty of the officer authorized to collect and receive the amount of such assessment to charge, collect and receive interest thereon at the rate of seven per centum per annum, to be calculated to the date of payment from the date when such assessment became a lien, as provided by section 159 of this act."

Section 159 of this act provides "An assessment shall become a lien upon the real estate affected thereby ten days after its entry in the said record."

The above assessments are payable to the Collector of Assessments and Arrears at the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, in the Mechanics Bank Building, Court and Montague streets, Borough of Brooklyn, between the hours of 9 a. m. and 2 p. m., and on Saturdays from 9 a. m. to 12 m., and all payments made thereon on or before April 20, 1908, will be exempt from interest, as above provided, and after that date will be subject to a charge of interest at the rate of seven per centum per annum from the date when such assessments became liens to the date of payment.

#### NOTICE TO PROPERTY OWNERS.

IN PURSUANCE OF SECTION 1018 OF THE Greater New York Charter, the Comptroller of The City of New York hereby gives public notice to all persons, owners of property, affected by the following assessment for LOCAL IMPROVEMENTS in the BOROUGH OF QUEENS:

#### FIRST WARD.

DUTCH KILLS STREET—SEWER, between Jackson avenue and the tracks of the Long Island Railroad Company. Area of assessment: Both sides of Dutch Kills street, from Jackson avenue to the property of the Long Island Railroad Company.

—that the same was confirmed by the Board of Assessors on February 18, 1908, and entered on February 18, 1908, in the Record of Titles of Assessments, kept in the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, and unless the amount assessed for benefit on any person or property shall be paid within sixty days after the date of said entry of the assessment, interest will be collected thereon, as provided in section 1019 of said Greater New York Charter.

Said section provides, in part, that "If any such assessment shall remain unpaid for the period of sixty days after the date of entry thereof in the said Record of Titles of Assessments, it shall be the duty of the officer authorized to collect and receive the amount of such assessment to charge, collect and receive interest thereon at the rate of seven per centum per annum, to be calculated to the date of payment from the date when such assessment became a lien, as provided by section 159 of this act."

Section 159 of this act provides "An assessment shall become a lien upon the real estate affected thereby ten days after its entry in the said record."

The above assessment is payable to the Collector of Assessments and Arrears at the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, at the Hackett Building, No. 51 Jackson avenue, Long Island City, Borough of Queens, between

the hours of 9 a. m. and 2 p. m., and on Saturdays from 9 a. m. until 12 m., and all payments made thereon on or before April 18, 1908, will be exempt from interest, as above provided, and after that date will be subject to a charge of interest at the rate of seven per centum per annum from the date when above assessment became a lien to the date of payment.

#### NOTICE TO PROPERTY OWNERS.

#### NOTICES OF ASSESSMENTS FOR OPENING STREETS AND PARKS.

IN PURSUANCE OF SECTION 1005 OF THE Greater New York Charter, the Comptroller of The City of New York hereby gives public notice of the confirmation by the Supreme Court, and the entering in the Bureau for the Collection of Assessments and Arrears of the assessment for OPENING AND ACQUIRING TITLE to the following named avenue and street in the BOROUGH OF BROOKLYN:

#### TWENTY-SIXTH WARD, SECTION 13.

GRANT AVENUE—OPENING, from Atlantic avenue to Liberty avenue. Confirmed December 13, 1907; entered February 15, 1908. Area of assessment includes all those lands, tenements and hereditaments and premises situate, lying and being in the Borough of Brooklyn, in The City of New York, which, taken together, are bounded and described as follows, viz.:

Beginning on the southerly side of Atlantic avenue, where the same is intersected by the centre line of the block between Grant avenue and Elderts lane; running thence southerly and along the centre line of the blocks between Grant avenue and Elderts lane to the northerly side of Liberty avenue; running thence westerly and along the northerly side of Liberty avenue to the centre line of the block between Sheridan avenue and Grant avenue; running thence northerly and along the centre line of the blocks between Sheridan avenue and Grant avenue to the southerly side of Atlantic avenue; running thence easterly and along the southerly side of the Atlantic avenue to the point or place of beginning.

THIRTIETH WARD, SECTIONS 1 AND 17. FORTY-FIRST STREET—OPENING, from New Utrecht avenue to the old city line. Confirmed December 30, 1907; entered February 15, 1908. Area of assessment includes all those lands, tenements and hereditaments and premises situate, lying and being in the Borough of Brooklyn, in The City of New York, which, taken together, are bounded and described as follows, viz.:

Beginning at a point on the line dividing the Eighth and Thirtieth Wards where the centre line of the block between Forty-first and Fortieth streets intersects said line; running thence southerly and parallel with Forty-first street to the westerly side of New Utrecht avenue; running thence southerly and along the westerly side of New Utrecht avenue to its intersection with the northwesterly side of Tenth avenue; running thence southwesterly along the northwesterly side of Tenth avenue to the centre line of the block between Forty-first street and Forty-second street; running thence northwesterly and along the centre line of the blocks between Forty-first street and Forty-second street to the line dividing the Eighth and Thirtieth Wards; running thence northeasterly along the line dividing the Eighth and Thirtieth Wards to the point or place of beginning.

The above entitled assessments were entered on the day hereinbefore given in the Record of Titles of Assessments, kept in the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, and unless the amount assessed for benefit on any person or property shall be paid within sixty days after the date of entry of the assessment, interest will be collected thereon, as provided in section 1006 of the Greater New York Charter.

Said section provides, in part, that "If any such assessment shall remain unpaid for the period of sixty days after the date of entry thereof in the said Record of Titles of Assessments, it shall be the duty of the officer authorized to collect and receive the amount of such assessment to charge, collect and receive interest thereon at the rate of seven per centum per annum, to be calculated to the date of payment from the date when such assessment became a lien, as provided by section 159 of this act."

Section 159 of this act provides "An assessment shall become a lien upon the real estate affected thereby ten days after its entry in the said record."

The above assessments are payable to the Collector of Assessments and Arrears, at the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, in the Mechanics Bank Building, Court and Montague streets, Borough of Brooklyn, between the hours of 9 a. m. and 2 p. m., and on Saturdays from 9 a. m. to 12 m., and all payments made thereon on or before April 15, 1908, will be exempt from interest, as above provided, and after that date will be subject to a charge of interest at the rate of seven per centum per annum from the date when such assessments became liens to the date of payment.

#### NOTICE TO PROPERTY OWNERS.

#### NOTICES OF ASSESSMENTS FOR OPENING STREETS AND PARKS.

IN PURSUANCE OF SECTION 1005 OF THE Greater New York Charter, the Comptroller of The City of New York hereby gives public notice of the confirmation by the Supreme Court, and the entering in the Bureau for the Collection of Assessments and Arrears of the assessment for OPENING AND ACQUIRING TITLE to the following named avenue and street in the BOROUGH OF BROOKLYN:

#### TWENTY-SIXTH WARD, SECTION 14.

SCHENCK AVENUE—OPENING, from New Lots road to Wortman avenue. Confirmed November 26, 1907; entered February 14, 1908. Area of assessment includes all those lands, tenements and hereditaments and premises situate, lying and being in the Borough of Brooklyn, in The City of New York, which, taken together, are bounded and described as follows, viz.:

Beginning on the southerly side of New Lots avenue, or road, where the same is intersected by a line drawn parallel with Schenck avenue and distant one hundred feet easterly therefrom; running thence southerly and parallel with Schenck avenue to the northerly side of Wortman avenue; running thence westerly and along the northerly side of Wortman avenue to a point distant one hundred feet westerly of the westerly side of Schenck avenue; running thence northerly parallel with Schenck avenue to the southerly side of New Lots avenue, or road; running thence east-

erly along the southerly side of New Lots avenue, or road, to the point or place of beginning.

### THIRTIETH WARD, SECTION 19.

**BAY FOURTEENTH STREET—OPENING.** From Eighty-sixth street to Coney avenue. Confirmed December 30, 1907; entered February 14, 1908. Area of assessment includes all those lands, tenements and hereditaments and premises situate, lying and being in the Borough of Brooklyn, in The City of New York, which, taken together, are bounded and described as follows, viz.:

Beginning on the southerly side of Eighty-sixth street where the same is intersected by the centre line of the block between Bay Fourteenth street and Seventeenth avenue; running thence southwesterly and along the centre line of the blocks between Bay Fourteenth street and Seventeenth avenue to the northerly side of Coney avenue; running thence northwesterly and along the northerly side of Coney avenue to the centre line of the block between Bay Thirteenth street and Bay Fourteenth street; running thence northeasterly and along the centre line of the blocks between Bay Thirteenth street and Bay Fourteenth street to the southerly side of Eighty-sixth street; running thence southeasterly and along the southerly side of Eighty-sixth street to the point of beginning.

The above-entitled assessments were entered on the day hereinafter given in the Record of Titles of Assessments, kept in the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, and unless the amount assessed for benefit on any person or property shall be paid within sixty days after the date of entry of the assessment, interest will be collected thereon, as provided in section 1006 of the Greater New York Charter.

Said section provides, in part, that "If any such assessment shall remain unpaid for the period of sixty days after the date of entry thereof in the said Record of Titles of Assessments, it shall be the duty of the officer authorized to collect and receive the amount of such assessment to charge, collect and receive interest thereon at the rate of seven per centum per annum, to be calculated to the date of payment from the date when such assessment became a lien, as provided by section 150 of this act."

Section 150 of this act provides "An assessment shall become a lien upon the real estate affected thereby ten days after its entry in the said record."

The above assessments are payable to the Collector of Assessments and Arrears at the Bureau for the Collection of Assessments and Arrears of Taxes and Assessments and of Water Rents, in the Mechanics' Bank Building, Court and Montague streets, Borough of Brooklyn, between the hours of 9 a. m. and 2 p. m., and on Saturdays from 9 a. m. to 12 m., and all payments made thereon on or before April 14, 1908, will be exempt from interest, as above provided, and after that date will be subject to a charge of interest at the rate of seven per centum per annum from the date when such assessments became liens to the date of payment.

HERMAN A. METZ,

Comptroller.

City of New York, Department of Finance, Comptroller's Office, February 14, 1908.

**PUBLIC NOTICE IS HEREBY GIVEN** that the Commissioners of the Sinking Fund of The City of New York, by virtue of the powers vested in them by law, will offer for sale at public auction on

**FRIDAY, MARCH 6, 1908,**

at 12 o'clock m., at the Comptroller's Office, No. 280 Broadway, Borough of Manhattan, City of New York, all the right, title and interest of The City of New York in and to the following described property, which it has by virtue of a lease from Cornelius Furguson, Supervisor of the Town of New Utrecht, to the City of Brooklyn, which lease is recorded in the Register's Office of the County of Kings, in Liber 1715 of Conveyances, page 143, in and to all that certain lot mentioned and described as follows:

All that certain lot known as and by the number 6, in Block 1154, Ward 30, in the former City of Brooklyn, which was sold December 6, 1886, for 100 years to the Town of New Utrecht for the assessments for the opening of Ninety-second street, for the sum of thirty-one dollars and fifty cents (\$31.50).

The minimum or upset price at which the interest of the City in and to the said premises to be sold is appraised and fixed by the Commissioners of the Sinking Fund at seventy-one dollars and sixty-nine cents (\$71.69).

The purchaser, in addition thereto, to pay the auctioneer's fee on such sale, and also to pay the further sum of one hundred dollars (\$100) for the expense of examination, advertising, etc. The sale of the said premises is to be made on the following

#### TERMS AND CONDITIONS.

The highest bidder will be required to pay the full amount of his bid or purchase money, and the further sum of \$100 on such parcel as above provided for, and also the auctioneer's fee at the time of sale. The quit-claim deed for the above-described premises to be delivered within thirty days from the date of sale.

The Comptroller may, at his option, resell the property if the successful bidder shall fail to comply with the terms of the sale, and the person failing to comply therewith will be held liable for any deficiency which may result from such resale.

The right to reject any bid is reserved. By order of the Commissioners of the Sinking Fund, under resolution adopted at a meeting of the Board held February 5, 1908.

N. TAYLOR PHILLIPS,

Acting Comptroller.

City of New York, Department of Finance, Comptroller's Office, February 14, 1908.

f15,m6

DEPARTMENT OF FINANCE, CITY OF NEW YORK, December 14, 1906.

**UNTIL FURTHER NOTICE AND UNLESS** otherwise directed in any special case surety companies will be accepted as sufficient upon the following contracts to the amounts named:

Supplies of Any Description, including Gas and Electricity—

One company on a bond up to \$50,000.

Two companies on a bond up to \$125,000.

Three companies on a bond up to \$200,000.

Asphalt, Asphalt Block and Wood Block Pavements—

Two companies on a bond up to \$50,000.

Three companies on a bond up to \$125,000.

Regulating, Grading, Paving, Sewers, Water Mains, Dredging, Construction of Parks, Parkways, Etc.—

One company on a bond up to \$25,000.

Two companies on a bond up to \$75,000.

Three companies on a bond up to \$150,000.

Four companies on a bond up to \$250,000.

New Docks, Buildings, Bridges, Aqueducts, Tunnels, Etc.—

One company on a bond up to \$25,000.

Two companies on a bond up to \$75,000.

Three companies on a bond up to \$150,000.

Four companies on a bond up to \$250,000.

Repairs, Ventilating, Heating, Plumbing, Etc.—

One company on a bond up to \$25,000.

Two companies on a bond up to \$75,000.

Three companies on a bond up to \$150,000.

Four companies on a bond up to \$250,000.

On bonds regarded as hazardous risks additional surety will be required as the Comptroller sees fit in each instance.

All bonds exceeding \$250,000 will by that fact alone be considered hazardous risks, no matter what the nature of the work.

H. A. METZ,

Comptroller.

### BOARD OF ESTIMATE AND APPORTIONMENT.

#### NOTICE IS HEREBY GIVEN THAT THE

Board of Estimate and Apportionment of The City of New York, deeming it for the public interest so to do, proposes to change the map or plan of The City of New York so as to close and discontinue Johnson's lane, from East Twelfth street and Avenue S to East Fifteenth street, Borough of Brooklyn, and that a meeting of said Board will be held in the Old Council Chamber, City Hall, Borough of Manhattan, City of New York, on March 13, 1908, at 10:30 o'clock a. m., at which such proposed change will be considered by said Board; all of which is more particularly set forth and described in the following resolutions adopted by the Board on February 14, 1908, notice of the adoption of which is hereby given, viz.:

Resolved, That the Board of Estimate and Apportionment of The City of New York, in pursuance of the provisions of section 442 of the Greater New York Charter, as amended, deeming it for the public interest so to do, proposes to change the map or plan of The City of New York by closing and discontinuing Johnson's lane, from East Twelfth street and Avenue S to East Fifteenth street, in the Borough of Brooklyn, City of New York, more particularly described as follows:

#### Parcel A.

The northern line of Johnson's lane as here-with closed begins at a point on the southern line of Avenue S, distant 10.03 feet easterly from the intersection of the eastern line of East Twelfth street with the southerly line of Avenue S, as the same are laid out on the map of the City;

1. Thence easterly deflecting from the southern line of Avenue S 44 degrees 56 minutes 29 seconds to the right 63.2 feet;

2. Thence easterly 137.64 feet to a point on the southern line of Avenue S, distant 154.74 feet westerly from the intersection of the southern line of Avenue S with the western line of East Thirteenth street.

The southern line of Johnson's lane as here-with closed is 16.49 feet from and parallel with the above described line.

#### Parcel B.

The southern line of Johnson's lane as here-with closed begins at a point on the northern line of Avenue S, distant 130.60 feet westerly from the intersection of the northern line of Avenue S with the western line of East Fourteenth street, as the same are laid out on the map of the City;

Thence easterly 138.06 feet to a point on the western line of East Fourteenth street, distant 44.78 feet northerly from the intersection of the western line of East Fourteenth street with the northern line of Avenue S.

The northern line of Johnson's lane as here-with closed is 16.49 feet from and parallel with the above described line.

#### Parcel C.

The southern line of Johnson's lane as here-with closed begins at a point on the eastern line of East Fourteenth street, distant 65.35 feet northerly from the intersection of the northern line of Avenue S with the eastern line of East Fourteenth street, as the same are laid out on the map of the City;

Thence easterly 211.43 feet to a point on the western line of East Fifteenth street, distant 133.93 feet northerly from the intersection of the northern line of Avenue S with the western line of East Fifteenth street.

The northern line of Johnson's lane as here-with closed is 16.49 feet from and parallel with the above described line.

Resolved, That this Board consider the proposed change at a meeting of the Board, to be held in the City Hall, Borough of Manhattan, City of New York, on the 13th day of March, 1908, at 10:30 o'clock a. m.

Resolved, That the Secretary of this Board cause these resolutions and a notice to all persons affected thereby that the proposed change will be considered at a meeting of the Board, to be held at the aforesaid time and place, to be published in the City Record and the corporation newspapers for ten days continuously, Sundays and legal holidays excepted, prior to the 13th day of March, 1908.

Dated February 29, 1908.

JOSEPH HAAG,

Secretary.

No. 277 Broadway, Room 1406.

Telephone, 2280 Worth.

#### NOTICE IS HEREBY GIVEN THAT THE

Board of Estimate and Apportionment of The City of New York, deeming it for the public interest so to do, proposes to change the map or plan of The City of New York so as to widen Terrace place, between Seventeenth street and Prospect avenue; extend Terrace place, from Prospect avenue to Coney Island avenue; change the lines of Sherman street, between Sherman street and Terrace place; discontinue Sherman street, between Reeve place and Terrace place; discontinue Sherman street, between the old City line and Terrace place; change the grades of Terrace place, from Eighteenth street to Prospect avenue; establish grades in Terrace place, between Prospect avenue and Coney Island avenue; establish grades in Sherman street, between Seelye street and Terrace place, and change the grades of Seventeenth street, between Eleventh avenue and Terrace place, Borough of Brooklyn, and that a meeting of said Board will be held in the Old Council Chamber, City Hall, Borough of Manhattan, City of New York, on March 13, 1908, at 10:30 o'clock a. m., at which such proposed change will be considered by said Board; all of which is more particularly set forth and described in the following resolutions adopted by the Board on February 14, 1908, notice of the adoption of which is hereby given, viz.:

Resolved, That the Board of Estimate and Apportionment of The City of New York, in pursuance of the provisions of section 442, of the Greater New York Charter, as amended, deeming it for the public interest so to do, proposes to change the map or plan of The City of New York, by widening Terrace place, between Seventeenth street and Prospect avenue; extending Terrace place, from Prospect avenue to Coney Island avenue; changing the lines of Sherman street, between Seelye street and Terrace place; discontinuing Sherman street, between Reeve place and Terrace place; discontinuing Sherman street, between the old City line and Terrace place; changing the grades of Terrace place, from Eighteenth street to Prospect avenue; establishing grades in Terrace place, between Prospect avenue and Coney Island avenue; establishing grades in Sherman street, between Seelye street and Terrace place, and changing the grades of Seventeenth street, from Eleventh avenue to Terrace place, in the Borough of Brooklyn, City of New York, more particularly described as follows:

#### WIDENING AND EXTENDING.

##### Terrace Place.

1. The northerly line of Terrace place, between Seventeenth street and Windsor place, is to be a straight prolongation of the northerly line of Terrace place, as now laid out between Eleventh avenue and Seventeenth street.

2. The southerly line of Terrace place, between Prospect avenue and Coney Island avenue is to be 80 feet distant from and parallel with the said northerly line.

##### Sherman Street.

1. The easterly line of Sherman street is to begin at a point on the southerly line of Terrace place, extended as hereinbefore described, distant 214.33 feet westerly from the intersection with the westerly line of Coney Island avenue and is to extend southwardly to a point on the northerly line of Seelye street, distant 162 feet westerly from the intersection with the westerly line of Coney Island avenue.

2. The westerly line of Sherman street is to be distant 60 feet westerly from and parallel with the said easterly line.

3. The lines of Sherman street as at present laid out between the northerly line of Reeve place and the old City line are hereby discontinued and closed.

4. The lines of Sherman street as at present laid out between the northerly line of Terrace place, extended as hereinbefore described, and the old City line are hereby discontinued and closed.

##### GRADES.

##### Terrace Place, Northerly Curb Line.

1. The elevation at the intersection with the easterly curb line of Eighteenth street to be 122 feet, as heretofore established.

2. The elevation at the intersection with the westerly curb line of Seventeenth street to be 112.35 feet.

3. The elevation at the intersection with the easterly curb line of Seventeenth street to be 111.52 feet.

4. The elevation at a point distant 14 feet westerly from the intersection with the westerly curb line of Prospect avenue to be 104.08 feet.

5. The elevation at the intersection with the westerly curb line of Prospect avenue to be 104.08 feet, as in use and improved.

6. The elevation at the intersection with the easterly curb line of Prospect avenue to be 104.72 feet, as in use and improved.

7. The elevation at the intersection with the southwesterly curb line of Sherman street to be 99.3 feet.

8. The elevation at the intersection with the northeasterly curb line of Sherman street to be 99.9 feet.

9. The elevation at a point distant 123 feet easterly from the intersection with the easterly curb line of Sherman street to be 100.4 feet.

10. The elevation at a point distant 21 feet westerly from the intersection with the westerly curb line of Windsor place to be 99.9 feet.

11. The elevation at the intersection with the westerly curb line of Windsor place to be 99.9 feet, as in use and improved.

##### Terrace Place, Southerly Curb Line.

1. The elevation at the intersection with the easterly curb line of Eighteenth street to be 122.0 feet, as heretofore established.

2. The elevation at a point distant 298 feet easterly from the intersection with the easterly curb line of Eighteenth street to be 110.52 feet.

3. The elevation at the intersection with the westerly curb line of Prospect avenue to be 102.03 feet, as in use and improved.

4. The elevation at the intersection with the easterly curb line of Prospect avenue to be 102.68 feet, as in use and improved.

5. The elevation at a point distant 92 feet easterly from the intersection with the easterly curb line of Prospect avenue to be 103.5 feet.

6. The elevation at the intersection with the westerly curb line of Sherman place to be 99.5 feet.

7. The elevation at the intersection with the easterly curb line of Sherman street to be 99.5 feet.

8. The elevation at a point distant 98 feet easterly from the intersection with the easterly curb line of Sherman street to be 99.9 feet.

9. The elevation at the intersection with the westerly curb line of Coney Island avenue to be 98.16 feet, as in use and improved.

##### Seventeenth Street.

1. The elevation at Eleventh avenue to be 126.75 feet, as heretofore established.

2. The elevation at the northwesterly curb intersection at Terrace place to be 112.35 feet.

3. The elevation at the northeasterly curb intersection at Terrace place to be 111.52 feet.

##### Sherman Street.

1. The elevation at Seelye street to be 93.28 feet, as in use and improved.

2. The elevation at the southeasterly and southwesterly curb line intersections at Terrace place to be 99.5 feet.

3. The elevation at the northwesterly curb line intersection at Terrace place to be 100.3 feet.

4. The elevation at the northeasterly curb intersection at Terrace place to be 99.9 feet.

dred and Eightieth streets; change the grade of Loring place, between West One Hundred and Seventy-ninth and West One Hundred and Eightieth streets; change the grade of Andrews avenue, between West One Hundred and Seventy-ninth street and the property of the University of The City of New York, and change the grade of Wiegand place, between West One Hundred and Eightieth street and the property of the University of The City of New York, Borough of The Bronx, and that a meeting of said Board will be held in the Old Council Chamber, City Hall, Borough of Manhattan, City of New York, on March 13, 1908, at 10.30 o'clock a. m., at which such proposed change will be considered by said Board; all of which is more particularly set forth and described in the following resolutions adopted by the Board on February 14, 1908, notice of the adoption of which is hereby given, viz.:

Resolved, That the Board of Estimate and Apportionment of The City of New York, in pursuance of the provisions of section 442 of the Greater New York Charter, as amended, deeming it for the public interest so to do, proposes to change the map or plan of The City of New York by changing the line of West One Hundred and Eightieth street, between Osborn place and Aqueduct avenue; discontinuing a portion of Osborn place at West One Hundred and Eightieth street; discontinuing a portion of Loring place at West One Hundred and Eightieth street; discontinuing a portion of Andrews avenue at West One Hundred and Eightieth street; extending Wiegand place at West One Hundred and Eightieth street; changing the grade of West One Hundred and Eightieth street, between Osborn place and Aqueduct avenue; changing the grade of Osborn place, between West One Hundred and Seventy-ninth and West One Hundred and Eightieth streets; changing the grade of Loring place, between West One Hundred and Seventy-ninth and West One Hundred and Eightieth streets; changing the grade of Andrews avenue, between West One Hundred and Seventy-ninth street and the property of the University of The City of New York; changing the grade of Wiegand place, between West One Hundred and Eightieth street and the property of the University of The City of New York, in the Borough of The Bronx, City of New York, more particularly described as follows:

#### West One Hundred and Eightieth Street.

1. The southerly line is to begin at a point on the easterly line of Osborn place distant 197.187 feet northerly from the intersection of the easterly line of Osborn place with the northerly line of West One Hundred and Seventy-ninth street; thence in a straight line to a point on the westerly line of Aqueduct avenue distant 326.648 feet northerly from the intersection of the westerly line of Aqueduct avenue with the northerly line of West One Hundred and Seventy-ninth street, the said distance being measured along the line of Aqueduct avenue.

2. The northerly line is to be distant 60 feet from and parallel with the said southerly line.

#### Andrews Avenue.

1. The lines of Andrews avenue, as heretofore laid out northerly from the northerly line of West One Hundred and Eightieth street, are to be extended in a straight prolongation to the intersection with the northerly line of West One Hundred and Eightieth street, laid out as hereinbefore described.

#### Wiegand Place.

1. The lines of Wiegand place, as heretofore laid out northerly from the intersection with the northerly line of West One Hundred and Eightieth street, are to be extended in a straight prolongation to the intersection with the northerly line of West One Hundred and Eightieth street, laid out as hereinbefore described.

#### Osborn Place.

1. That portion of Osborn place lying between the northerly line of West One Hundred and Eightieth street, as heretofore laid out, and the northerly line of West One Hundred and Eightieth street, laid out as hereinbefore described, is hereby discontinued and closed.

#### Loring Place.

1. That portion of Loring place between the southerly line of West One Hundred and Eightieth street, as heretofore laid out, and the southerly line of West One Hundred and Eightieth street, laid out as hereinbefore described, is hereby discontinued and closed.

#### Andrews Avenue.

1. That portion of Andrews avenue lying between the southerly line of West One Hundred and Eightieth street, as heretofore laid out, and the southerly line of West One Hundred and Eightieth street, laid out as hereinbefore described, is hereby discontinued and closed.

#### CHANGE IN GRADE.

#### West One Hundred and Eightieth Street.

1. The elevation at Osborn place to be 118.0 feet.

2. The elevation at a point distant 220 feet easterly from the southeasterly curb intersection at Osborn place to be 135.0 feet.

3. The elevation at Loring place to be 127.8 feet.

4. The elevation at a point distant 250 feet easterly from the southeasterly curb intersection at Loring place to be 136.0 feet.

5. The elevation at Andrews avenue to be 137.6 feet.

6. The elevation at the northwesterly curb intersection at Wiegand place to be 142.5 feet.

7. The elevation opposite the northeasterly building line intersection at Wiegand place to be 142.0 feet.

8. The elevation opposite the southwesterly building line intersection at Aqueduct avenue to be 119.5 feet.

9. The elevation at Aqueduct avenue to be as heretofore established.

#### Osborn Place.

1. The elevation at West One Hundred and Seventy-ninth street to be 100.0 feet, as heretofore established.

2. The elevation at West One Hundred and Eightieth street to be 118.0 feet.

#### Loring Place.

1. The elevation at West One Hundred and Seventy-ninth street to be 109.5 feet, as heretofore established.

2. The elevation at West One Hundred and Eightieth street to be 127.8 feet.

#### Andrews Avenue.

1. The elevation at West One Hundred and Seventy-ninth street to be 126.0 feet, as heretofore established.

2. The elevation at West One Hundred and Eightieth street to be 137.6 feet.

3. The elevation at a point distant 220 feet northerly from the northeasterly curb intersection of West One Hundred and Eightieth street to be 150.0 feet, as heretofore established.

4. The elevation at the property line of the University of The City of New York to be 157.0 feet.

#### Wiegand Place.

1. The elevation at the northwesterly curb intersection at West One Hundred and Eightieth street to be 142.5 feet.

2. The elevation opposite the northeasterly building line intersection at West One Hundred and Eightieth street to be 143.0 feet.

3. The elevation opposite the angle point in the westerly building line to be 160.0 feet.

4. The elevation at the property line of the University of The City of New York to be 161.0 feet.

All elevations are referred to mean high water datum as established in the Borough of The Bronx.

Resolved, That this Board consider the proposed change at a meeting of the Board, to be held in the City Hall, Borough of Manhattan, City of New York, on the 13th day of March, 1908, at 10.30 o'clock a. m.

Resolved, That the Secretary of this Board cause these resolutions and a notice to all persons affected thereby that the proposed change will be considered at a meeting of the Board, to be held at the aforesaid time and place, to be published in the City Record for ten days continuously, Sundays and legal holidays excepted, prior to the 13th day of March, 1908.

Dated February 29, 1908.

JOSEPH HAAG,  
Secretary,

Telephone, 2280 Worth.

f29,m11

NOTICE IS HEREBY GIVEN THAT THE Board of Estimate and Apportionment of The City of New York, deeming it for the public interest so to do, proposes to change the map or plan of The City of New York so as to lay out and fix grades for Heberton avenue, between Ann street and Richmond terrace, in the Third Ward, Borough of Richmond, and that a meeting of said Board will be held in the Old Council Chamber, City Hall, Borough of Manhattan, City of New York, on March 13, 1908, at 10.30 o'clock a. m., at which such proposed change will be considered by said Board; all of which is more particularly set forth and described in the following resolutions adopted by the Board on February 14, 1908, notice of the adoption of which is hereby given, viz.:

Resolved, That the Board of Estimate and Apportionment of The City of New York, in pursuance of the provisions of section 442 of the Greater New York Charter as amended, deeming it for the public interest so to do, proposes to change the map or plan of The City of New York by laying out and fixing grades for Heberton avenue, between Ann street and Richmond terrace, in the Third Ward, in the Borough of Richmond, City of New York, more particularly described as follows:

#### LINE.

A. The northwesterly line of the street is to begin at the intersection of the northwesterly line of Ann street with the northwesterly line of Heberton avenue, as the said streets are now in use.

1. Thence northeasterly along the line of Heberton avenue, as now in use, a distance of 195.71 feet, forming an angle with Ann street in the northerly quadrant of the intersection of 39 degrees 59 minutes 58 seconds.

2. Thence northeasterly, curving to the right on the arc of a circle of 198.19 feet radius, tangent to the preceding course, 130.10 feet.

3. Thence easterly and tangent to the preceding course 136.77 feet to the line of Richmond terrace.

B. The southeasterly line of the street is to be 65 feet southeasterly from and parallel with the above-described northwesterly line.

#### GRADES.

1. The grade of the northwesterly curb line on the northwesterly curb line of Ann street is to be 21.6 feet.

2. The grade of the southeasterly curb line at the northwesterly curb line of Ann street is to be 21.2 feet.

3. The street grade at the intersection of the centre line with the radial line passing through the southerly points of curvature described in the alignment is to be 19.3 feet.

4. The grade of the northerly curb line at its intersection with the westerly curb line of Richmond terrace is to be 9 feet.

5. The grade of the southerly curb line at its intersection with the westerly curb line of Richmond terrace is to be 8.65 feet.

The above elevations refer to Richmond high-water datum.

Resolved, That this Board consider the proposed change at a meeting of the Board, to be held in the City Hall, Borough of Manhattan, City of New York, on the 13th day of March, 1908, at 10.30 o'clock a. m.

Resolved, That the Secretary of this Board cause these resolutions and a notice to all persons affected thereby that the proposed change will be considered at a meeting of the Board to be held at the aforesaid time and place, to be published in the City Record for ten days continuously, Sundays and legal holidays excepted, prior to the 13th day of March, 1908.

Dated February 29, 1908.

JOSEPH HAAG,  
Secretary,  
No. 277 Broadway, Room 1406.

Telephone, 2280 Worth.

f29,m11

NOTICE IS HEREBY GIVEN THAT AT the meeting of the Board of Estimate and Apportionment held on February 14, 1908, the following resolutions were adopted:

Whereas, The Board of Estimate and Apportionment of The City of New York is considering the advisability of instituting proceedings to acquire title to the lands and premises required for the opening and extending of West One Hundred and Eighty-fourth street, from Broadway to unnamed street (Overlook terrace), and opening and extending said unnamed street (Overlook terrace), from West One Hundred and Eighty-fourth street to Fort Washington avenue, in the Borough of Manhattan, City of New York; and

Whereas, The Board of Estimate and Apportionment is authorized and required at the time of the adoption of the resolution directing the institution of proceedings to acquire title to the lands required for the foregoing improvement to fix and determine upon an area or areas of assessment for benefit for said proceeding.

Resolved, That the Board of Estimate and Apportionment, in pursuance of the provisions of section 980 of the Greater New York Charter, hereby gives notice that the following is the proposed area of assessment for benefit in this proceeding:

Beginning at a point on the line bisecting the angle formed by the prolongations of the centre lines of Bennett avenue and the unnamed street meeting West One Hundred and Eighty-first street westerly therefrom distant 100 feet southerly from the southerly line of West One Hundred and Eighty-fourth street, the said distance being measured at right angles to the line of West One Hundred and Eighty-fourth street, and running thence westerly in a course parallel with West One Hundred and Eighty-fourth

street to the intersection with the prolongation of a line distant 100 feet westerly from and parallel with the westerly line of Overlook terrace, the said distance being measured at right angles to the line of Overlook terrace; thence northwesterly along a line always distant 100 feet westerly from and parallel with the westerly line of Overlook terrace as laid out north of West One Hundred and Eighty-fourth street to the intersection with a line distant 450 feet southerly from and parallel with the southerly line of Overlook terrace as laid out east of and adjacent to Fort Washington avenue, the said distance being measured at right angles to the line of Overlook terrace; thence westwardly and parallel with the said line of Overlook terrace as laid out east of Fort Washington avenue to the intersection with a line always distant 100 feet westerly from and parallel with the westerly line of Fort Washington avenue, the said distance being measured at right angles to the line of Fort Washington avenue; thence northwesterly along the said line parallel with Fort Washington avenue to the intersection with a line distant 750 feet northerly from the northerly line of Overlook terrace as laid out immediately east of Fort Washington avenue, the said distance being measured at right angles to the line of Overlook terrace; thence easterly along the said line parallel with Overlook terrace to the intersection with the prolongation of a line distant 100 feet easterly from and parallel with Overlook terrace as laid out southerly from the angle point east of Fort Washington avenue, the said distance being measured at right angles to the line of Overlook terrace; thence southwesterly along a line always distant 100 feet easterly from and parallel with the easterly line of Overlook terrace as laid out south of the angle point east of Fort Washington avenue, and along the prolongation of the said course to the intersection with a line bisecting the angle formed by the prolongations of the centre lines of Overlook terrace and Bennett avenue as laid out immediately northerly from West One Hundred and Eighty-fourth street; thence southwesterly along the said bisecting line to the intersection with a line midway between West One Hundred and Eighty-fourth street and the first street northerly therefrom as laid out between Broadway and Overlook terrace; thence easterly along the said line midway between West One Hundred and Eighty-fourth street and the first street northerly therefrom to the centre line of Broadway; thence southwesterly along the centre line of Broadway to the intersection with the prolongation of a line midway between West One Hundred and Eighty-fourth street and West One Hundred and Eighty-fifth street as laid out between Wadsworth avenue and Broadway; thence easterly along the said line midway between West One Hundred and Eighty-fourth street and West One Hundred and Eighty-fifth street, and the prolongation thereof, to the intersection with the centre line of Broadway; thence southwesterly along the centre line of Broadway to the intersection with a line parallel with West One Hundred and Eighty-fourth street as laid out between Broadway and Overlook terrace, and passing through a point on the westerly line of Bennett avenue distant 330 feet southerly from the intersection of the westerly line of Bennett avenue with the southerly line of West One Hundred and Eighty-fourth street; thence westwardly along the said line parallel with West One Hundred and Eighty-fourth street to the intersection with the line bisecting the angle formed by the prolongations of the centre lines of Bennett avenue and the unnamed street meeting West One Hundred and Eighty-first street westerly therefrom; thence northwesterly along the said bisecting line to the point or place of beginning.

Resolved, That this Board consider the proposed area of assessment at a meeting of the Board to be held in The City of New York, Borough of Manhattan, in the City Hall, on the 13th day of March, 1908, at 10.30 a. m., and that at the same time and place a public hearing thereon will then and there be had.

Resolved, That the Secretary of this Board cause these resolutions and a notice to all persons affected thereby to be published in the City Record for ten days prior to the 13th day of March, 1908.

Dated February 29, 1908.

NOTICE IS HEREBY GIVEN THAT AT the meeting of the Board of Estimate and Apportionment held on February 14, 1908, the following resolutions were adopted:

Whereas, The Board of Estimate and Apportionment of The City of New York is considering the advisability of instituting proceedings to acquire title to the lands and premises required for the opening and extending of Vienna avenue, from East Ninety-eighth street to Fountain avenue, excluding the land occupied by the tracks of the Long Island Railroad and the Brooklyn and Rockaway Beach Railroad, in the Borough of Brooklyn, City of New York; and

Whereas, The Board of Estimate and Apportionment is authorized and required at the time of the adoption of the resolution directing the institution of proceedings to acquire title to the lands required for the foregoing improvement to fix and determine upon an area or areas of assessment for benefit for said proceeding.

Resolved, That the Board of Estimate and Apportionment, in pursuance of the provisions of section 980 of the Greater New York Charter, hereby gives notice that the following is the proposed area of assessment for benefit in this proceeding:

Beginning at a point on the easterly line of East Ninety-eighth street where it is intersected by a line midway between Hegeman avenue and Vienna avenue, as laid out between East Ninety-eighth street and Williams avenue, and running thence easterly along the said line midway between Hegeman avenue and Vienna avenue to the intersection with a line midway between Hegeman avenue and Vienna avenue, as laid out between Williams avenue and Fountain avenue; thence easterly along the said line midway between Hegeman avenue and Vienna avenue and the prolongation of the said line to a point distant 100 feet easterly from the easterly line of Fountain avenue; thence southwesterly and parallel with the prolongation of a line midway between Vienna avenue and Stanley avenue, as laid out between Fountain avenue and Louisiana avenue; thence westwardly along the said line midway between Vienna avenue and Stanley avenue and the prolongation of the said line to the intersection with the centre line of Louisiana avenue;

thence southwardly along the said centre line of Louisiana avenue to the intersection with the prolongation of a line midway between Vienna avenue and Stanley avenue, as laid out between East Ninety-eighth street and Stone avenue; thence westwardly along the said line midway between Vienna avenue and Stanley avenue and the prolongation of the same to the easterly line of East Ninety-eighth street; thence westwardly at right angles to East Ninety-eighth street a distance of 180 feet; thence northwardly and parallel with East Ninety-eighth street to the intersection with a line at right angles to East Ninety-eighth street and passing through the point described as the point of beginning; thence easterly along the said line at right angles to East Ninety-eighth street to the point or place of beginning.

Resolved, That this Board consider the proposed area of assessment at a meeting of the Board, to be held in The City of New York, Borough of Manhattan, in the City Hall, on the 13th day of March, 1908, at 10.30 a. m., and that at the same time and place a public hearing thereon will then and there be had.

Resolved, That the Secretary of this Board cause these resolutions and a notice to all persons affected thereby to be published in the City Record and the corporation newspapers for ten days prior to the 13th day of March, 1908.

Dated February 29, 1908.

NOTICE IS HEREBY GIVEN THAT AT the meeting of the Board of Estimate and Apportionment held on February 14, 1908, the following resolutions were adopted:

Whereas, The Board of Estimate and Apportionment of The City of New York is considering the advisability of instituting proceedings to acquire title to the lands and premises required for the opening and extending of Lefferts avenue, from New York avenue to East New York avenue, in the Borough of Brooklyn, City of New York; and

Whereas, The Board of Estimate and Apportionment is authorized and required at the time of the adoption of the resolution directing the institution of proceedings to acquire title to the lands required for the foregoing improvement to fix and determine upon an area or areas of assessment for benefit for said proceeding.

Resolved, That the Board of Estimate and Apportionment, in pursuance of the provisions of section 980 of the Greater New York Charter, hereby gives notice that the following is the proposed area of assessment for benefit in this proceeding:

Beginning at a point on the line midway between Midwood street and Rutland road distant 100 feet westerly from the westerly line of New York avenue, and running thence easterly along the said line midway between Midwood street and Rutland road and the prolongation thereof to the intersection with a line which is midway between Utica avenue and East Fifty-first street; thence northwardly along the said line midway between Utica avenue and East Fifty-first street to the intersection with a line which bisects the angle formed by the prolongation of the southerly line of East New York avenue and the northerly line of Rutland road as the said streets are laid out east of Remsen avenue; thence northwardly along the said bisecting line to the intersection with a line which is midway between East Ninety-second street and East Ninety-third street; thence northwardly and along the said line midway between East Ninety-second and East Ninety-third streets, and the prolongation thereof, to the intersection with a line which is midway between Crown street and Montgomery street; thence westwardly and along the said line midway between Crown street and Montgomery street to the intersection with a line which is midway between Kingston avenue and Albany avenue; thence southwardly and along the said line midway between Kingston avenue and Albany avenue to a point distant 100 feet northerly from the northerly line of Malbone street; thence westwardly and always parallel with the northerly line of Malbone street and distant 100 feet therefrom to the intersection with a line passing through the point of beginning and parallel with New York avenue as laid out south of Malbone street; thence southwardly in a straight line to the point of beginning.

Resolved, That this Board consider the proposed area of assessment at a meeting of the Board, to be held in The City of New York, Borough of Manhattan, in the City Hall, on the 13th day of March, 1908, at 10.30 a. m., and that at the same time and place a public hearing thereon will then and there be had.

Resolved, That the Secretary of this Board cause these resolutions and a notice to all persons affected thereby to be published in the City Record and the corporation newspapers for ten days prior to the 13th day of March, 1908.

Dated February 29, 1908.

NOTICE IS HEREBY GIVEN THAT AT the meeting of the Board of Estimate and Apportionment held on February 14, 1908, the following resolutions were adopted:

Whereas, The Board of Estimate and Apportionment of The City of New York is considering the advisability of instituting proceedings to acquire title to the lands and premises required for the opening and extending of Wakeman place, from First avenue to Third avenue, where not already acquired by the City for parkway purposes, and Sixty-seventh street, from First to Third avenue, in the Borough of Brooklyn, City of New York; and

Whereas, The Board of Estimate and Apportionment is authorized and required at the time of the adoption of the resolution directing the institution of proceedings to acquire title to the lands required for the foregoing improvement to fix and determine upon an area or areas of assessment for benefit for said proceeding.

Resolved, That the Board of Estimate and Apportionment, in pursuance of the provisions of section 980 of the Greater New York Charter, hereby gives notice that the following is the proposed area of assessment for benefit in this proceeding:

Beginning at the intersection of a line distant 100 feet northerly from and parallel with the northerly line of Sixty-seventh street, the said distance being measured at right angles to the line of Sixty-seventh street with a line distant 100 feet southeasterly from the southeasterly line of Third avenue, the said distance being measured at right angles to the line of Third avenue, and running thence westwardly and parallel with Sixty-seventh street to the intersection with the centre line of Third avenue; thence northwardly along the centre line of Third avenue to the intersection with the prolongation of a line midway between Sixty-sixth street and Wakeman place; thence northwardly along the line midway between Sixty-sixth street and Wakeman place to the intersection with the centre line of Second avenue; thence southwardly along the centre line of Second avenue to the intersection

tion with the centre line of Wakeman place; thence northwestwardly along the centre line of Wakeman place to a point distant 100 feet northwesterly from the northwesterly line of First avenue; thence southwestwardly and always parallel with and distant 100 feet from First avenue to the intersection with the prolongation of a line midway between Sixty-seventh street and Senator street; thence eastwardly and always midway between Sixty-seventh street and Senator street, to a point distant 100 feet easterly from the easterly side of Third avenue, the said distance being measured at right angles to the line of Third avenue; thence northeastwardly and always parallel with Third avenue to the point or place of beginning.

Resolved, That this Board consider the proposed area of assessment at a meeting of the Board, to be held in The City of New York, Borough of Manhattan, in the City Hall, on the 13th day of March, 1908, at 10.30 a. m., and that at the same time and place a public hearing thereon will then and there be had.

Resolved, That the Secretary of this Board cause these resolutions and a notice to all persons affected thereby to be published in the City Record and the corporation newspapers for ten days prior to the 13th day of March, 1908.

NOTICE IS HEREBY GIVEN THAT AT the meeting of the Board of Estimate and Apportionment held on February 14, 1908, the following resolutions were adopted:

Whereas, The Board of Estimate and Apportionment of The City of New York is considering the advisability of instituting proceedings to acquire title to the lands and premises required for the opening and extending of Garrison avenue, from Leggett avenue to Longwood avenue, in the Borough of The Bronx, City of New York; and

Whereas, The Board of Estimate and Apportionment is authorized and required at the time of the adoption of the resolution directing the institution of proceedings to acquire title to the lands required for the foregoing improvement to fix and determine upon an area or areas of assessment for benefit for said proceeding;

Resolved, That the Board of Estimate and Apportionment, in pursuance of the provisions of section 980 of the Greater New York Charter, hereby gives notice that the following is the proposed area of assessment for benefit in this proceeding:

Beginning at a point on the prolongation of a line midway between the Southern boulevard and Whitlock avenue, as laid out between East One Hundred and Fifty-sixth street and Longwood avenue, distant 100 feet southwesterly from its intersection with the southwesterly line of Leggett avenue, and running thence northeastwardly along the said line midway between the Southern boulevard and Whitlock avenue and the prolongations of the said line, to a point distant 100 feet northerly from the northerly line of Lafayette avenue, the said distance being measured at right angles to the line of Lafayette avenue; thence eastwardly and parallel with Lafayette avenue to the intersection with a line which bisects the angle formed by the intersection of the centre lines of Garrison avenue and Tiffany street; thence southwardly along the said bisecting line to a point distant 100 feet northeasterly from the northeasterly line of Longwood avenue, the said distance being measured at right angles to the line of Longwood avenue; thence south-easterly and parallel with Longwood avenue to the intersection with a line which is the bisector of the angle formed by the intersection of the prolongations of the southeasterly line of Barry street and the northwesterly line of Truxton street as laid out between Leggett avenue and Longwood avenue; thence southwestwardly along the said bisecting line to the intersection with a line which bisects the angle formed by the intersection of the prolongations of the centre lines of the Eastern boulevard and Leggett avenue as laid out west of Truxton street; thence westwardly along the said bisecting line to the westerly line of Cabot street; thence northwestwardly in a straight line to the point or place of beginning.

Resolved, That this Board consider the proposed area of assessment at a meeting of the Board, to be held in The City of New York, Borough of Manhattan, in the City Hall, on the 13th day of March, 1908, at 10.30 a. m., and that at the same time and place a public hearing thereon will then and there be had.

Resolved, That the Secretary of this Board cause these resolutions and a notice to all persons affected thereby to be published in the City Record for ten days prior to the 13th day of March, 1908.

NOTICE IS HEREBY GIVEN THAT AT the meeting of the Board of Estimate and Apportionment held on February 14, 1908, the following resolutions were adopted:

Whereas, The Board of Estimate and Apportionment of The City of New York is considering the advisability of instituting proceedings to acquire title to the lands and premises required for the opening and extending of East One Hundred and Forty-first street, from Park avenue to Rider avenue, in the Borough of The Bronx, City of New York; and

Whereas, The Board of Estimate and Apportionment is authorized and required at the time of the adoption of the resolution directing the institution of proceedings to acquire title to the lands required for the foregoing improvement to fix and determine upon an area or areas of assessment for benefit for said proceeding;

Resolved, That the Board of Estimate and Apportionment, in pursuance of the provisions of section 980 of the Greater New York Charter, hereby gives notice that the following is the proposed area of assessment for benefit in this proceeding:

Beginning at a point on the northwesterly property line of the New York and Harlem Railroad where it is intersected by the prolongation of a line midway between East One Hundred and Fortieth street and East One Hundred and Forty-first street, as laid out between Park avenue and Canal place, and running thence northeastwardly along the northwesterly property line of the New York and Harlem Railroad to the intersection with a line which bisects the angle formed by the intersection of the prolongations of the southerly line of East One Hundred and Forty-fourth street and the northerly line of East One Hundred and Forty-first street, as laid out between Park avenue and Canal place; thence eastwardly along the said bisecting line to the northwesterly line of Rider avenue; thence southwardly in a straight line to a point on the southeasterly line of Rider avenue midway between East One Hundred and Forty-first street and East One Hundred and Forty-second street; thence southwardly and par-

allel with East One Hundred and Forty-first street to a point distant 100 feet southeasterly from the southeasterly line of Rider avenue, the said distance being measured at right angles to the line of Rider avenue; thence southwestwardly and parallel with Rider avenue to the intersection with the prolongation of a line midway between East One Hundred and Forty-first street and East One Hundred and Fortieth street, as the said streets are laid out between Park avenue and Canal place; thence northwestwardly along the said line midway between East One Hundred and Forty-first street and East One Hundred and Fortieth street and the prolongation of the said line to the point or place of beginning.

Resolved, That this Board consider the proposed area of assessment at a meeting of the Board, to be held in The City of New York, Borough of Manhattan, in the City Hall, on the 13th day of March, 1908, at 10.30 a. m., and that at the same time and place a public hearing thereon will then and there be had.

Resolved, That the Secretary of this Board cause these resolutions and a notice to all persons affected thereby to be published in the City Record for ten days prior to the 13th day of March, 1908.

NOTICE IS HEREBY GIVEN THAT AT the meeting of the Board of Estimate and Apportionment held on February 14, 1908, the following resolutions were adopted:

Whereas, The Board of Estimate and Apportionment of The City of New York is considering the advisability of instituting proceedings to acquire title to the lands and premises required for the opening and extending of Two Hundred and Fifth street (Adee avenue), from White Plains road to Boston Post road, in the Borough of The Bronx, City of New York; and

Whereas, The Board of Estimate and Apportionment is authorized and required at the time of the adoption of the resolution directing the institution of proceedings to acquire title to the lands required for the foregoing improvement to fix and determine upon an area or areas of assessment for benefit for said proceeding;

Resolved, That the Board of Estimate and Apportionment, in pursuance of the provisions of section 980 of the Greater New York Charter, hereby gives notice that the following is the proposed area of assessment for benefit in this proceeding:

Bounded on the north by a line midway between Adee avenue and Burke avenue; on the east by a line parallel with and always distant 100 feet easterly from the easterly line of Boston Post road, the said distance being measured at right angles to the line of Boston Post road; on the south by a line midway between Adee avenue and Arnow avenue, and on the west by a line distant 100 feet westerly from and parallel with the westerly line of White Plains road.

Resolved, That this Board consider the proposed area of assessment at a meeting of the Board, to be held in The City of New York, Borough of Manhattan, in the City Hall, on the 13th day of March, 1908, at 10.30 a. m., and that at the same time and place a public hearing thereon will then and there be had.

Resolved, That the Secretary of this Board cause these resolutions and a notice to all persons affected thereby to be published in the City Record for ten days prior to the 13th day of March, 1908.

NOTICE IS HEREBY GIVEN THAT AT the meeting of the Board of Estimate and Apportionment held on February 14, 1908, the following resolutions were adopted:

Whereas, The Board of Estimate and Apportionment of The City of New York is considering the advisability of instituting proceedings to acquire title to the lands and premises required for the opening and extending of Wilson avenue, from the Old Bowery Bay road to Tenth avenue, in the First Ward, in the Borough of Queens, City of New York; and

Whereas, The Board of Estimate and Apportionment is authorized and required at the time of the adoption of the resolution directing the institution of proceedings to acquire title to the lands required for the foregoing improvement to

fix and determine upon an area or areas of assessment for benefit for said proceeding.

Resolved, That the Board of Estimate and Apportionment, in pursuance of the provisions of section 980 of the Greater New York Charter, hereby gives notice that the following is the proposed area of assessment for benefit in this proceeding:

Bounded on the northeast by a line which is the bisector of the angle formed by the intersection of the prolongations of the centre lines of Wilson avenue and Flushing avenue; on the southeast by a line parallel with and always distant 100 feet southeasterly from the southeasterly line of the Old Bowery Bay road, the said distance being measured at right angles to the line of the Old Bowery Bay road; on the southwest by a line midway between Wilson avenue and Vandewater avenue and the prolongations of the said line, and on the northwest by a line parallel with and distant 100 feet northwesterly from the northwesterly line of Tenth avenue, the said distance being measured at right angles to the line of Tenth avenue.

Resolved, That this Board consider the proposed area of assessment at a meeting of the Board, to be held in The City of New York, Borough of Manhattan, in the City Hall, on the 13th day of March, 1908, at 10.30 a. m., and that at the same time and place a public hearing thereon will then and there be had.

Resolved, That the Secretary of this Board cause these resolutions and a notice to all persons affected thereby to be published in the City Record for ten days prior to the 13th day of March, 1908.

NOTICE IS HEREBY GIVEN THAT THE Board of Estimate and Apportionment of The City of New York, deeming it for the public interest so to do, proposes to change the map or plan of The City of New York so as to lay out a tentative street plan and fix street grades for the proposed street system within a territory located in portions of the First, Second, Third and Fourth wards, Borough of Queens, and that a meeting of said Board will be held in the Old Council Chamber, City Hall, Borough of Manhattan, City of New York, on March 13, 1908, at 10.30 o'clock a. m., at which such proposed change will be considered by said Board; all of which is more particularly set forth and described in the following resolutions adopted by the Board on February 14, 1908, notice of the adoption of which is hereby given, viz.:

Resolved, That the Board of Estimate and Apportionment of The City of New York, in pursuance of the provisions of section 442 of the Greater New York Charter, as amended, deeming it for the public interest so to do, proposes to change the map or plan of The City of New York by laying out a tentative street plan and fixing grades for the proposed street system within a territory located in portions of the First, Second, Third and Fourth wards, in the Borough of Queens, City of New York, more particularly described as follows:

A tentative street system is to be laid out within the territory bounded by Bowery Bay, Flushing Bay, Flushing River, Riverside avenue, Union turnpike, Forest Park, Myrtle avenue, Olmstead place, Central avenue, Proctor street, Cook street, Morton avenue, Metropolitan avenue, Van Dusen street, Satterlee avenue, Thew avenue, Penelope avenue, Florence avenue, Corinth street, Locust avenue, Brown place, Mueller street, Jay avenue, Carroll place, Garfield street, Columbia avenue, main line of the Long Island Railroad, Grout avenue, Sixth street, Polk avenue, New street, Woodside avenue, Newtown road, Nineteenth avenue, Grand avenue and Seventeenth avenue, and grades are to be established therefor. The lines and grades to be fixed are shown upon a map prepared by the President of the Borough of Queens, bearing date of June 1, 1907.

Resolved, That this Board consider the proposed change at a meeting of the Board, to be held in the City Hall, Borough of Manhattan, City of New York, on the 13th day of March, 1908, at 10.30 o'clock a. m.

Resolved, That the Secretary of this Board cause these resolutions and a notice to all persons affected thereby that the proposed change will be considered at a meeting of the Board, to be held at the aforesaid time and place, to be published in the City Record for ten days continuously, Sundays and legal holidays excepted, prior to the 13th day of March, 1908.

Dated February 29, 1908.

## POLICE DEPARTMENT.

POLICE DEPARTMENT OF THE CITY OF NEW YORK, NO. 300 MULBERRY STREET.

SEALED BIDS OR ESTIMATES WILL BE received by the Police Commissioner of the Police Department of The City of New York at the Bookkeeper's office, Central Department, until 10 o'clock a. m. on

WEDNESDAY, MARCH 4, 1908.

FOR SUPPLYING GENERAL STATIONERY, PRINTERS' AND SURGEONS' SUPPLIES FOR THE USE OF THE POLICE DEPARTMENT OF THE CITY OF NEW YORK.

The time for the delivery of the articles, materials and supplies and the performance of the contract is during the year 1908.

The amount of security required will be fifty per cent. (50%) of the amount of the bid or estimate.

The bidder will state the price of each item or article contained in the specifications or schedules herein contained or hereto annexed, per pound, ton, dozen, gallon, yard or other unit of measure, by which the bids will be tested. The extensions must be made and footed up, as the bids will be read from the total for each item, and the Police Department reserves the right to award the contract by the entire schedule or to award for each item.

Delivery will be required to be made at the time and in the manner and in such quantities as may be directed.

Blank forms and further information may be obtained at the Central Office of the Police Department, No. 300 Mulberry street, Borough of Manhattan.

THEODORE A. BINGHAM,  
Police Commissioner.

Dated February 18, 1908.

#### DEPARTMENT OF TAXES AND ASSESSMENTS.

THE CITY OF NEW YORK, DEPARTMENT OF TAXES AND ASSESSMENTS, MAIN OFFICE, BOROUGH OF MANHATTAN, HALL OF RECORDS, JANUARY 10, 1908.

NOTICE IS HEREBY GIVEN, AS REQUIRED by the Greater New York Charter, that the books called "The Annual Record of the Assessed Valuation of Real and Personal Estate of the Boroughs of Manhattan, The Bronx, Brooklyn, Queens and Richmond," comprising The City of New York, will be open for public inspection, examination and correction on the second Monday of January, and will remain open up to and including the 31st day of March, 1908.

During the time that the books are open for public inspection, application may be made by any person or corporation claiming to be aggrieved by the assessed valuation of real or personal estate to have the same corrected.

In the Borough of Manhattan, at the main office of the Department of Taxes and Assessments, Hall of Records, No. 31 Chambers street.

In the Borough of The Bronx, at the office of the Department, Municipal Building, One Hundred and Seventy-seventh street and Third avenue.

In the Borough of Brooklyn, at the office of the Department, Municipal Building.

In the Borough of Queens, at the office of the Department, Hackett Building, Jackson avenue and Fifth street, Long Island City.

In the Borough of Richmond, at the office of the Department, Borough Hall, New Brighton, Staten Island.

Corporations in all the boroughs must make application only at the main office in the Borough of Manhattan.

Applications in relation to the assessed valuation of personal estate must be made by the person assessed at the office of the Department in the borough where such person resides, and in case of a non-resident carrying on business in The City of New York at the office of the Department of the borough where such place of business is located, between the hours of 10 a. m. and 2 p. m., except on Saturday, when all applications must be made between 10 a. m. and 12 noon.

## SUPREME COURT—FIRST DEPARTMENT.

## FIRST DEPARTMENT.

In the matter of the application of The City of New York relative to acquiring title, wherever the same has not been heretofore acquired, to the lands, tenements and hereditaments required for the opening and extending of EAST TWO HUNDRED AND THIRTY-THIRD STREET (although not yet named by proper authority), from Bronx River to Hutchinson River; also the PUBLIC PLACE at the intersection of East Two Hundred and Thirty-third street with Morris Park avenue, and the PUBLIC PLACE at the eastern terminus of East Two Hundred and Thirty-third street and Hutchinson River, in the Twenty-fourth Ward, Borough of The Bronx, The City of New York, as amended by an order entered herein discontinuing the above-entitled proceeding, so far as the same affects that part of East Two Hundred and Thirty-third street lying between the westerly side of Baychester avenue and Hutchinson River.

NOTICE IS HEREBY GIVEN THAT THE supplemental and additional bill of costs, charges and expenses incurred by reason of the proceedings in the above-entitled matter, will be presented for taxation to one of the Justices of the Supreme Court of the State of New York, First Department, at a Special Term thereof, Part I., to be held at the County Court House in the Borough of Manhattan, in The City of New York, on the 12th day of March, 1908, at 10.30 o'clock in forenoon of that day, or as soon thereafter as counsel can be heard thereon; and that the said bill of costs, charges and expenses has been deposited in the office of the Clerk of the County of New York, there to remain for and during the space of ten days, as required by the provisions of section 999 of the Greater New York Charter, as amended by chapter 466 of the Laws of 1901.

Dated Borough of Manhattan, New York, February 28, 1908.

T. ELLETT HODGSKIN,  
JOHN W. WARD,  
DANIEL CORCORAN,  
Commissioners.

JOHN P. DUNN,  
Clerk.

f28,m10

## FIRST DEPARTMENT.

In the matter of the application of The City of New York relative to acquiring title, wherever the same has not been heretofore acquired, to the lands, tenements and hereditaments required for the opening and extending of the strip of land on the east side of BOULEVARD LAFAYETTE, at or near Durando's lane, as laid out for as a public park, in the Twelfth Ward, Borough of Manhattan, City of New York.

WE, THE UNDERSIGNED COMMISSIONERS of Estimate and Assessment in the above-entitled matter, hereby give notice to all persons interested in this proceeding, and to the owner or owners, occupant or occupants, of all houses and lots and improved and unimproved lands affected thereby, and to all others whom it may concern, to wit:

First—That we have completed our estimate for damage and that all persons interested in this proceeding, or in any of the lands, tenements and hereditaments and premises affected thereby, and having objections thereto, do present their said objections in writing, duly verified, to us at our office, Nos. 90 and 92 West Broadway, in the Borough of Manhattan, in The City of New York, on or before the 23d day of March, 1908, and that we, the said Commissioners, will hear parties so objecting, and for that purpose will be in attendance at our said office on the 24th day of March, 1908, at 2 o'clock p. m.

Second—That the abstract of our said estimate for damage, together with our damage maps, and also all the affidavits, estimates, proofs and other documents used by us in making the same, have been deposited in the Bureau of Street Openings in the Law Department of The City of New York, Nos. 90 and 92 West Broadway, in the Borough of Manhattan, in said City, there to remain until the 28th day of March, 1908.

Third—That, provided there be no objections filed to said abstract, our final report herein will be presented for confirmation to the Supreme Court of the State of New York, First Department, at a Special Term thereof, Part III., to be held in the County Court House, in the Borough of Manhattan, in The City of New York, on the 14th day of May, 1908, at the opening of the Court on that day.

Fourth—In case, however, objections are filed to said abstract of estimate for damage, the notice of motion to confirm our final report herein will stand adjourned to the date to be hereafter specified, and of which notice will be given to all those who have theretofore appeared in this proceeding, as well as by publication in the City Record, pursuant to sections 981 and 984 of the Greater New York Charter, as amended by chapter 658 of the Laws of 1906.

Dated Borough of Manhattan, New York, February 24, 1908.

DANIEL P. HAY,  
Chairman;  
ALEXANDER SCHLESINGER,  
Commissioners.

JOHN P. DUNN,  
Clerk.

f28,m17

## FIRST DEPARTMENT.

In the matter of the application of The City of New York relative to acquiring title, wherever the same has not been heretofore acquired, to the lands, tenements and hereditaments required for the opening and extending of EAST TWO HUNDRED AND EIGHTH STREET (although not yet named by proper authority), from Reservoir Oval West to Jerome avenue, in the Twenty-fourth Ward, Borough of The Bronx, City of New York.

NOTICE IS HEREBY GIVEN THAT THE supplemental and additional bill of costs, charges and expenses incurred by reason of the proceedings in the above-entitled matter, will be presented for taxation to one of the Justices of the Supreme Court of the State of New York, First Department, at a Special Term thereof, Part I., to be held at the County Court House in the Borough of Manhattan, in The City of New York, on the 3d day of March, 1908, at 10.30 o'clock in forenoon of that day, or as soon thereafter as counsel can be heard thereon; and that the said bill of costs, charges and expenses has been deposited in the office of the Clerk of the County of New York, there to remain for

and during the space of ten days, as required by the provisions of section 999 of the Greater New York Charter, as amended by chapter 466 of the Laws of 1901.

Dated Borough of Manhattan, New York, February 18, 1908.

EDWARD D. DOWLING,  
MICHAEL RAUCH,  
RODERICK J. KENNEDY,  
Commissioners.

JOHN P. DUNN,  
Clerk.

f18,29

## FIRST DEPARTMENT.

In the matter of the application of The City of New York relative to acquiring title, wherever the same has not been heretofore acquired for the same purpose in fee, to the lands, tenements and hereditaments required for the widening of RIVERSIDE DRIVE, between West One Hundred and Thirty-ninth street and West One Hundred and Forty-second street, in the Twelfth Ward, Borough of Manhattan, City of New York.

NOTICE IS HEREBY GIVEN THAT BY an order of the Supreme Court, bearing date the 29th day of October, 1907, and duly entered in the office of the Clerk of the County of New York at his office in the Borough of Manhattan in The City of New York, on the 16th day of December, 1907, a copy of which order was duly filed in the office of the Register of the County of New York, we, Donald McLean, Ewen Justice and Joseph P. Morrissey, were appointed Commissioners of Estimate for the purpose of making a just and equitable estimate and assessment of the loss and damage to the respective owners, lessees, parties and persons respectively entitled unto or interested in the lands, tenements, hereditaments and premises required for the purpose by and in consequence of widening the above-mentioned street or avenue, the same being particularly set forth and described in the petition of The City of New York, and also in the notice of the application for the said order thereto attached, filed herein in the office of the Clerk of the County of New York on the 16th day of December, 1907, and of ascertaining and defining the extent and boundaries of the respective tracts or parcels of land to be taken or to be assessed therefor, and of performing the trusts and duties required of us by chapter 17, title 4 of the Greater New York Charter, as amended, and the Acts or parts of Acts supplementary thereto or amendatory thereof.

All parties and persons interested in the real estate taken or to be taken for the purpose of widening the said street or avenue and affected thereby, and having any claim or demand on account thereof, are hereby required to present the same, duly verified, to us, the undersigned Commissioners of Estimate, at our office, ninth floor, Nos. 90 and 92 West Broadway, in the Borough of Manhattan, in The City of New York, with such affidavit or other proof as the owners or claimants may desire, within ten days after the date of this notice.

And we, the said Commissioners, will be in attendance at our said office on the 4th day of March, 1908, at 3 o'clock in the afternoon of that day, to hear the said parties and persons in relation thereto. And at such time and place, and at such further or other time and place as we may appoint, we will hear such owners in relation thereto and examine the proofs of such claimant or claimants, or such additional proofs and allegations as may then be offered by such owner, or on behalf of The City of New York.

Dated Borough of Manhattan, City of New York, February 18, 1908.

JOSEPH P. MORRISSEY,

## FIRST DEPARTMENT.

In the matter of the application of The City of New York relative to acquiring title, wherever the same has not been heretofore acquired for the same purpose in fee, to the lands, tenements and hereditaments required for the opening and extending of EAST ONE HUNDRED AND EIGHTIETH STREET, from Bronx River to West Farms road, in the Twenty-fourth Ward, Borough of The Bronx, City of New York.

NOTICE IS HEREBY GIVEN THAT BY an order of the Supreme Court, bearing date the 7th day of November, 1907, and duly entered in the office of the Clerk of the County of New York at his office in the Borough of Manhattan, in The City of New York, on the 16th day of December, 1907, a copy of which order was duly filed in the office of the Register of the County of New York, we, Frank A. Spencer, Jr., Henry Martens and Francis J. Kuerzi, were appointed Commissioners of Estimate for the purpose of making a just and equitable estimate and assessment of the loss and damage to the respective owners, lessees, parties and persons respectively entitled unto or interested in the lands, tenements, hereditaments and premises required for the purpose by and in consequence of opening and extending the above-mentioned street or avenue, the same being particularly set forth and described in the petition of The City of New York, and also in the notice of the application for the said order thereto attached, filed herein in the office of the Clerk of the County of New York on the 16th day of December, 1907, and the said Frank A. Spencer, Jr., was appointed Commissioner of Assessment for the purpose of making a just and equitable estimate and assessment of the value of the benefit and advantage of the said street or avenue so to be opened and extended, to the respective owners, lessees, parties and persons respectively entitled unto or interested in the respective lands, tenements, hereditaments and premises situated within the area of assessment adopted by the Board of Estimate and Apportionment and not required for the purpose of opening and extending the same but benefited thereby, the said area of assessment being par-

ticularly set forth and described in the petition of The City of New York, and also in the notice of the application for the said order thereto attached, filed herein in the office of the Clerk of the County of New York on the 16th day of December, 1907, and of ascertaining and defining the extent and boundaries of the respective tracts or parcels of land to be taken or to be assessed therefor, and of performing the trusts and duties required of us by chapter 17, title 4 of the Greater New York Charter, as amended, and the Acts or parts of Acts supplementary thereto or amendatory thereof.

All parties and persons interested in the real estate taken or to be taken for the purpose of opening and extending the said street or avenue and affected thereby, and having any claim or demand on account thereof, are hereby required to present the same, duly verified, to us, the undersigned Commissioners of Estimate, at our office, ninth floor, Nos. 90 and 92 West Broadway, in the Borough of Manhattan, in The City of New York, with such affidavit or other proof as the owners or claimants may desire, within ten days after the date of this notice.

And we, the said Commissioners, will be in attendance at our said office on the 3d day of March, 1908, at 2 o'clock in the afternoon of that day, to hear the said parties and persons in relation thereto. And at such time and place, and at such further or other time and place as we may appoint, we will hear such owners in relation thereto and examine the proofs of such claimant or claimants, or such additional proofs and allegations as may then be offered by such owner, or on behalf of The City of New York.

Dated Borough of Manhattan, City of New York, February 17, 1908.

FRANK A. SPENCER, JR.,  
HENRY MARTENS,  
FRANCIS J. KUERZI,  
Commissioners.

JOHN P. DUNN,  
Clerk.

## FIRST DEPARTMENT.

In the matter of the application of The City of New York relative to acquiring title, wherever the same has not been heretofore acquired for the same purpose in fee, to the lands, tenements and hereditaments required for the opening and extending of ROCHAMBEAU AVENUE, from East Two Hundred and Twelfth street to the property line between the land of William W. Niles and the land formerly of Michael Varian, located about 255 feet south of Van Cortlandt avenue, in the Twenty-fourth Ward, Borough of The Bronx, City of New York.

NOTICE IS HEREBY GIVEN THAT BY an order of the Supreme Court, bearing date the 7th day of November, 1907, and duly entered in the office of the Clerk of the County of New York, at his office, in the Borough of Manhattan, in The City of New York, on the 16th day of December, 1907, a copy of which order was duly filed in the office of the Register of the County of New York and indexed in the Index of Conveyances, Blocks 3328, 3335, 3336, 3337, 3338, 3339 and 3340, we, Michael E. Devlin, Martin J. Moore and Thomas C. Larkin, were appointed Commissioners of Estimate for the purpose of making a just and equitable estimate and assessment of the loss and damage to the respective owners, lessees, parties and persons respectively entitled unto or interested in the lands, tenements, hereditaments and premises required for the purpose by and in consequence of opening and extending the above-mentioned street or avenue, the same being particularly set forth and described in the petition of The City of New York, and also in the notice of the application for the said order thereto attached, filed herein in the office of the Clerk of the County of New York on the 16th day of December, 1907, and the said Michael E. Devlin was appointed Commissioner of Assessment for the purpose of making a just and equitable estimate and assessment of the value of the benefit and advantage of the said street or avenue so to be opened and extended, to the respective owners, lessees, parties and persons respectively entitled unto or interested in the respective lands, tenements, hereditaments and premises situated within the area of assessment adopted by the Board of Estimate and Apportionment and not required for the purpose of opening and extending the same, but benefited thereby, the said area of assessment being particularly set forth and described in the petition of The City of New York, and also in the notice of the application for the said order thereto attached, filed herein in the office of the Clerk of the County of New York on the 16th day of December, 1907, and of ascertaining and defining the extent and boundaries of the respective tracts or parcels of land to be taken or to be assessed therefor, and of performing the trusts and duties required of us by chapter 17, title 4, of the Greater New York Charter as amended, and the acts or parts of acts supplementary thereto or amendatory thereof.

All parties and persons interested in the real estate taken or to be taken for the purpose of opening and extending the said street or avenue and affected thereby, and having any claim or demand on account thereof, are hereby required to present the same, duly verified, to us, the undersigned Commissioners of Estimate, at our office, ninth floor, Nos. 90 and 92 West Broadway, in the Borough of Manhattan, in The City of New York, with such affidavit or other proof as the owners or claimants may desire, within ten days after the date of this notice.

And we, the said Commissioners, will be in attendance at our said office on the 3d day of March, 1908, at 4 o'clock in the afternoon of that day, to hear the said parties and persons in relation thereto. And at such time and place, and at such further or other time and place as we may appoint, we will hear such owners in relation thereto and examine the proofs of such claimant or claimants, or such additional proofs and allegations as may then be offered by such owner, or on behalf of The City of New York.

Dated Borough of Manhattan, City of New York, February 17, 1908.

THOMAS C. LARKIN,  
MARTIN J. MOORE,  
MICHAEL E. DEVLIN,  
Commissioners.

JOHN P. DUNN,  
Clerk.

## FIRST DEPARTMENT.

In the matter of the application of The City of New York relative to acquiring title, wherever the same has not been heretofore acquired for the same purpose in fee, to the lands, tenements and hereditaments required for the opening and extending of SENECA AVENUE, from Hunts Point road to the Bronx River, in the Twenty-third Ward, Borough of The Bronx, City of New York.

NOTICE IS HEREBY GIVEN THAT BY an order of the Supreme Court, bearing date the 29th day of October, 1907, and duly entered in the office of the Clerk of the County of New York, at his office in the Borough of Manhattan, in The City of New York, on the 16th day of December, 1907, a copy of which order was duly filed in the office of the Register of the County of New York and indexed in the Index of Conveyances, Blocks 2761 and 2762, we, John Lanzer, J. Frederick Cryer and Sidney B. Hickox, were appointed Commissioners of Estimate for the purpose of making a just and equitable estimate and assessment of the loss and damage to the respective owners, lessees, parties and persons respectively entitled unto or interested in the lands, tenements, hereditaments and premises required for the purpose by and in consequence of opening and extending the above-mentioned street or avenue, the same being particularly set forth and described in the petition of The City of New York, and also in the notice of the application for the said order thereto attached, filed herein in the office of the Clerk of the County of New York on the 16th day of December, 1907, and the said John Lanzer was appointed Commissioner of Assessment for the purpose of making a just and equitable estimate and assessment of the value of the benefit and advantage of the said street or avenue so to be opened and extended, to the respective owners, lessees, parties and persons respectively entitled unto or interested in the respective lands, tenements, hereditaments and premises situated within the area of assessment adopted by the Board of Estimate and Apportionment and not required for the purpose of opening and extending the same but benefited thereby, the said area of assessment being particularly set forth and described in the petition of The City of New York, and also in the notice of the application for the said order thereto attached, filed herein in the office of the Clerk of the County of New York on the 16th day of December, 1907, and of ascertaining and defining the extent and boundaries of the respective tracts or parcels of land to be taken or to be assessed therefor, and of performing the trusts and duties required of us by chapter 17, title 4 of the Greater New York Charter, as amended, and the acts or parts of acts supplementary thereto or amendatory thereof.

All parties and persons interested in the real estate taken or to be taken for the purpose of opening and extending the said street or avenue and affected thereby, and having any claim or demand on account thereof, are hereby required to present the same, duly verified, to us, the undersigned Commissioners of Estimate, at our office, ninth floor, Nos. 90 and 92 West Broadway, in the Borough of Manhattan, in The City of New York, with such affidavit or other proof as the owners or claimants may desire, within ten days after the date of this notice.

And we, the said Commissioners, will be in attendance at our said office on the 3d day of March, 1908, at 3 o'clock in the afternoon of that day, to hear the said parties and persons in relation thereto. And at such time and place, and at such further or other time and place as we may appoint, we will hear such owners in relation thereto and examine the proofs of such claimant or claimants, or such additional proofs and allegations as may then be offered by such owner, or on behalf of The City of New York.

Dated Borough of Manhattan, City of New York, February 17, 1908.

J. FREDERICK CRYER,  
SIDNEY B. HICKOX,  
JOHN LANZER,  
Commissioners.

## FIRST DEPARTMENT.

In the matter of the application of The City of New York, relative to acquiring title, wherever the same has not been heretofore acquired for the same purpose in fee, to the lands, tenements and hereditaments required for the opening and extending of BOSTON ROAD (although not yet named by proper authority), from White Plains road to north line of the city, in the Twenty-fourth Ward, Borough of The Bronx, City of New York.

NOTICE IS HEREBY GIVEN THAT, BY an order of the Supreme Court, bearing date the 29th day of October, 1907, and duly entered in the office of the Clerk of the County of New York, at his office in the Borough of Manhattan in The City of New York, on the 16th day of December, 1907, a copy of which order was duly filed in the office of the Register of the County of New York, we, O. De Lancey Coster, Robert Wallace and John A. Hawkins were appointed Commissioners of Estimate for the purpose of making a just and equitable estimate and assessment of the loss and damage to the respective owners, lessees, parties and persons respectively entitled unto or interested in the lands, tenements, hereditaments and premises required for the purpose by and in consequence of opening and extending the above-mentioned street or avenue, the same being particularly set forth and described in the petition of The City of New York, and also in the notice of the application for the said order thereto attached, filed herein in the office of the Clerk of the County of New York on the 16th day of December, 1907, and the said John A. Hawkins was appointed Commissioner of Assessment for the purpose of making a just and equitable estimate and assessment of the value of the benefit and advantage of the said street or avenue so to be opened and extended, to the respective owners, lessees, parties and persons respectively entitled unto or interested in the respective lands, tenements, hereditaments and premises situated within the area of assessment adopted by the Board of Estimate and Apportionment and not required for the purpose of opening and extending the same, but benefited thereby, the said area of assessment being particularly set forth and described in the petition of The City of New York, and also in the notice of the application for the said order thereto attached, filed herein in the office of the Clerk of the County of New York on the 16th day of December, 1907, and of ascertaining and defining the extent and boundaries of the respective tracts or parcels of land to be taken or to be assessed therefor, and of performing the trusts and duties required of us by chapter 17, title 4, of the Greater New York Charter, as amended, and the acts or parts of acts supplementary thereto or amendatory thereof.

All parties and persons interested in the real estate taken or to be taken for the purpose of opening and extending the said street or avenue and affected thereby, and having any claim or demand on account thereof, are hereby required to present the same, duly verified, to us, the undersigned Commissioners of Estimate, at our office, ninth floor, Nos. 90 and 92 West Broadway, in the Borough of Manhattan, in The City of New York, with such affidavit or other proof as the owners or claimants may desire, within ten days after the date of this notice.

And we, the said Commissioners, will be in attendance at our said office on the 3d day of March, 1908, at 11 o'clock in the forenoon of

that day, to hear the said parties and persons in relation thereto; and at such time and place, and at such further or other time and place as we may appoint, we will hear such owners in relation thereto, and examine the proofs of such claimant or claimants, or such additional proofs and allegations as may then be offered by such owner, or on behalf of The City of New York.

Dated Borough of Manhattan, City of New York, February 17, 1908.

O. DE LANCEY COSTER,  
ROBERT WALLACE,  
JOHN A. HAWKINS,  
Commissioners.

JOHN P. DUNN,

## FIRST DEPARTMENT.

In the matter of the application of The City of New York, relative to acquiring title, wherever the same has not been heretofore acquired for the same purpose, in fee, to the lands, tenements and hereditaments required for the opening and extending of EAST TWO HUNDRED AND TWENTY-SEVENTH STREET, between Laconia avenue and Bronxwood avenue, and EAST TWO HUNDRED AND TWENTY-EIGHTH STREET, between Chapin street (First street) and Laconia avenue, both of said streets being in the Twenty-fourth Ward, Borough of The Bronx, City of New York.

**NOTICE IS HEREBY GIVEN THAT BY** an order of the Supreme Court, bearing date the 29th day of October, 1907, and duly entered in the office of the Clerk of the County of New York at his office in the Borough of Manhattan in The City of New York, on the 16th day of December, 1907, a copy of which order was duly filed in the office of the Register of the County of New York, we, Nicholas J. O'Connell, Louis Falk and Martin J. Donnelly, were appointed Commissioners of Estimate for the purpose of making a just and equitable estimate and assessment of the loss and damage to the respective owners, lessees, parties and persons respectively entitled unto or interested in the lands, tenements, hereditaments and premises required for the purpose by and in consequence of opening and extending the above mentioned streets or avenues, the same being particularly set forth and described in the petition of The City of New York, and also in the notice of the application for the said order thereto attached, filed herein in the office of the Clerk of the County of New York on the 16th day of December, 1907, and the said Nicholas J. O'Connell was appointed Commissioner of Assessment, for the purpose of making a just and equitable estimate and assessment of the value of the benefit and advantage of the said streets or avenues so to be opened and extended, to the respective owners, lessees, parties and persons respectively entitled to or interested in the respective lands, tenements, hereditaments and premises situated within the area of assessment adopted by the Board of Estimate and Apportionment and not required for the purpose of opening and extending the same, but benefited thereby, the said area of assessment being particularly set forth and described in the petition of The City of New York, and also in the notice of the application for the said order thereto attached, filed herein in the office of the Clerk of the County of New York on the 16th day of December, 1907, and of ascertaining and defining the extent and boundaries of the respective tracts or parcels of land to be taken or to be assessed therefor, and of performing the trusts and duties required of us by chapter 17, title 4, of the Greater New York Charter, as amended, and the acts or parts of acts supplementary thereto or amendatory thereof.

All parties and persons interested in the real estate taken or to be taken for the purpose of opening and extending the said streets or avenues, and affected thereby, and having any claim or demand on account thereof, are hereby required to present the same, duly verified, to us, the undersigned Commissioners of Estimate, at our office, ninth floor, Nos. 90 and 92 West Broadway, in the Borough of Manhattan, in The City of New York, with such affidavit or other proof as the owners or claimants may desire, within ten days after the date of this notice.

And we, the said Commissioners, will be in attendance at our said office on the 3d day of March, 1908, at 12 o'clock noon of that day, to hear the said parties and persons in relation thereto; and at such time and place as we may appoint, we will hear such owners in relation thereto and examine the proofs of such claimant or claimants, or such additional proofs and allegations as may then be offered by such owner, or on behalf of The City of New York.

Dated Borough of Manhattan, City of New York, February 17, 1908.

## SUPREME COURT—SECOND DEPARTMENT.

## SECOND JUDICIAL DISTRICT.

In the matter of the application of The City of New York to acquire certain real estate in the Towns of Lewisboro, Poundridge and Bedford, Westchester County, New York, under chapter 490 of the Laws of 1883 and the laws amendatory thereof, for the purpose of a dam and reservoir on Cross River, and for the purpose of supplying The City of New York with an increased supply of pure and wholesome water.

CROSS RIVER DAM AND RESERVOIR, FIRST DIVISION.

Notice of Filing and of Motion to Confirm Eighth Separate Report.

**PUBLIC NOTICE IS HEREBY GIVEN** that the eighth separate report of Daniel F. Cohalan, John F. Brennan and Benoni Platt, Commissioners of Appraisal in the above-entitled matter, was filed in the office of the Clerk of the County of Westchester, at White Plains in said county, on November 15, 1907.

Notice is further given that said eighth separate report includes and affects the parcels of land designated as Parcels Nos. 27, 27½, 29½, 32 and 40½ in said proceeding.

Notice is further given that an application will be made at a Special Term of the Supreme Court of the State of New York, to be held in and for the Ninth Judicial District, at the chambers of Mr. Justice Martin J. Keogh, in the City of New Rochelle, Westchester County, New York, on the 28th day of March, 1908, at 10 o'clock in the forenoon of that day, or as soon thereafter

after as counsel can be heard, for an order confirming said report and for such other and further relief as may be just.

Dated New York, February 21, 1908.  
FRANCIS K. PENDLETON,  
Corporation Counsel.  
Hall of Records, Borough of Manhattan, New York City.

## SECOND DEPARTMENT.

In the matter of acquiring title by The City of New York to certain lands and premises situated on the SOUTHEASTERN SIDE OF BROADWAY, between Elizabeth and Vreeland streets, in the Borough of Richmond, in The City of New York, duly selected as a site for school purposes, according to law.

**NOTICE IS HEREBY GIVEN THAT THE** report of Frederick S. Mullin, Edward Sidney Rawson and James G. Timolat, Commissioners of Estimate and Appraisal, duly appointed in the above-entitled proceeding, which report bears date the 8th day of November, 1908, was filed in the office of the Board of Education of The City of New York on the 28th day of February, 1908, and a duplicate of said report was filed in the office of the Clerk of the County of Richmond on the same day.

Notice is further given that the said report will be presented for confirmation to the Supreme Court of the State of New York, in the Second Judicial District, at Special Term for the hearing of motions, to be held at the County Court House in the Borough of Brooklyn, in The City of New York, on the 10th day of March, 1908, at the opening of the Court on that day, and that then and there, or as soon thereafter as counsel can be heard thereon, a motion will be made that the said report be confirmed.

Dated New York, February 28, 1908.  
FRANCIS K. PENDLETON,  
Corporation Counsel.  
Hall of Records, Borough of Manhattan, City of New York.

f29,m11

## SECOND DEPARTMENT.

In the matter of the application of The City of New York, relative to acquiring title, wherever the same has not been heretofore acquired, to the lands, tenements and hereditaments required for the opening and extending of CHURCH AVENUE, from Flatbush avenue to East Eleventh street, in the Twenty-ninth Ward, Borough of Brooklyn, City of New York.

**WE, THE UNDERSIGNED COMMISSIONERS** of Estimate and Assessment in the above-entitled matter, hereby give notice to all persons interested in this proceeding, and to the owner or owners, occupant or occupants of all houses and lots and improved and unimproved lands affected thereby, and to all others whom it may concern, to wit:

First—That we have completed our estimate and assessment, and that all persons interested in this proceeding, or in any of the lands, tenements and hereditaments and premises affected thereby, and having objections thereto, do present their said objections, in writing, duly verified, to us at our office, No. 166 Montague street, in the Borough of Brooklyn, in The City of New York, on or before the 18th day of March, 1908, and that we, the said Commissioners, will hear parties so objecting, and for that purpose will be in attendance at our said office on the 19th day of March, 1908, at 2.30 o'clock p. m.

Second—That the abstracts of our said estimate and assessment, together with our damage and benefit maps, and also all the affidavits, estimates, proofs and other documents used by us in making the same, have been deposited in the Bureau of Street Openings in the Law Department of The City of New York, No. 166 Montague street, in the Borough of Brooklyn, in said City, there to remain until the 28th day of March, 1908.

Third—That the limits of our assessment for benefit include all those lands, tenements and hereditaments and premises situate, lying and being in the Borough of Brooklyn, in The City of New York, which, taken together, are bounded and described as follows, viz:

Beginning at a point on the westerly side of Flatbush avenue where the same is intersected by a line drawn parallel with Church avenue and distant two hundred feet northerly of the northerly side of Church avenue; running thence westerly and parallel with Church avenue to the easterly side of East Eleventh street or Stratford road; running thence southerly and along the easterly side of East Eleventh street or Stratford road to where a line drawn parallel with the southerly side of Church avenue and distant two hundred feet southerly therefrom would intersect the easterly side of said Stratford road; running thence easterly and parallel with Church avenue to the westerly side of Flatbush avenue; running thence northerly along the westerly side of Flatbush avenue to the point or place of beginning.

Fourth—That, provided there be no objections filed to either of said abstracts, our final report herein will be presented for confirmation to the Supreme Court of the State of New York, Second Department, at a Special Term thereof for the hearing of motions, to be held in the County Court House in the Borough of Brooklyn, in The City of New York, on the 12th day of May, 1908, at the opening of the Court on that day.

Fifth—In case, however, objections are filed to either of said abstracts of estimate and assessment, the notice of motion to confirm our final report herein will stand adjourned to the date to be hereafter specified, and of which notice will be given to all those who have theretofore appeared in this proceeding, as well as by publication in the City Record and in the corporation newspapers, pursuant to sections 981 and 984 of the Greater New York Charter, as amended by chapter 658 of the Laws of 1906.

Dated Borough of Brooklyn, New York, February 28, 1908.

JOHN M. ZURN,  
GEO. W. PALMER,  
Commissioners.

JAMES F. QUIGLEY,  
Clerk.

f28,m16

## SECOND DEPARTMENT.

In the matter of the application of The City of New York relative to acquiring title to NEW-ELL STREET, from Meserole avenue to Greenpoint avenue, in the Seventeenth Ward, in the Borough of Brooklyn, The City of New York.

**NOTICE IS HEREBY GIVEN THAT WE,** the undersigned, were appointed by an order of the Supreme Court, made and entered herein on the 12th day of November, 1907, and duly filed in the office of the Clerk of Kings County, a copy of which order was filed in the office of the Register of the County of Kings on the 7th day of December, 1907, and indexed in the Index of Conveyances in Section 9, Blocks 2577, 2578, 2600, 2601, Commissioners of Estimate and Assessment for the purpose of making a just and equitable estimate of the loss and damage, if any, to the respective owners, lessees, parties and persons entitled to or interested in the lands and premises to be taken for the purpose of opening the said street or avenue, as particularly described in the petition of The City of New York, filed with said order in the office of the Clerk of Kings County, and for the purpose of making a just and equitable assessment of the benefit of said street or avenue so to be opened to the respective owners, parties and persons respectively entitled to or interested in the lands and premises, and not required for the purpose of opening said street or avenue, but benefited thereby, and of ascertaining and defining the district benefited by said assessment, and the extent and boundaries of the respective tracts and parcels of land participating in said benefit, and of performing the trusts and duties required of us by title 4 of chapter 17 of the Charter of The City of New York, and the Acts or parts of Acts supplementary thereto or amendatory thereof.

All parties and persons interested in the lands and premises taken or to be taken for the purpose of opening said street or avenue, or affected thereby, and having any claim or demand on account thereof, are hereby required to present the same, duly verified, to us, the undersigned Commissioners of Estimate and Assessment, at our office in the Bureau of Street Openings of the Law Department, No. 166 Montague street, Borough of Brooklyn, in The City of New York, with such affidavits or other proofs as the said owner or claimants may desire, within twenty days after date of this notice.

And we, the said Commissioners, will be in attendance at our said office on the 16th day of March, 1908, at 11 o'clock in the forenoon of that day, to hear the said parties and persons in relation thereto; and at such time and place, and at such further or other time and place as we may appoint, we will hear such owners in relation thereto and examine proofs of such claimant or claimants, or such additional proofs and allegations as may then be offered by such owner, or on behalf of The City of New York.

Dated Borough of Brooklyn, City of New York, February 19, 1908.

OTTO G. FOELKER,  
ELISHA T. EVERETT,  
AARON SHERK,  
Commissioners.

JAMES F. QUIGLEY,  
Clerk.

f19,m13

## SECOND DEPARTMENT.

In the matter of the application of The City of New York relative to acquiring title to the lands, tenements and hereditaments required for the purpose of opening and extending EAST TWENTY-FIFTH STREET, from Foster avenue to Flatbush avenue, in the Twenty-ninth Ward in the Borough of Brooklyn, in The City of New York, as the same has been heretofore laid out.

**NOTICE IS HEREBY GIVEN THAT THE** bill of costs, charges and expenses incurred by reason of the proceedings in the above-entitled matter, will be presented for taxation to one of the Justices of the Supreme Court of the State of New York, at a Special Term thereof to be held for the hearing of motions, at the Kings County Court House, in the Borough of Brooklyn, in The City of New York, on the 5th day of March, 1908, at 10.30 o'clock in the forenoon of that day, or as soon thereafter as counsel can be heard thereon; and that the said bill of costs, charges and expenses has been deposited in the office of the Clerk of the County of Kings, there to remain for and during the space of ten days, as required by the provisions of section 999 of title 4 of chapter 17, of chapter 378 of the Laws of 1897, as amended by chapter 466 of the Laws of 1901.

Dated Borough of Brooklyn, New York, February 19, 1908.

H. DE SELDING,  
J. HERBERT WATSON,  
A. MCKINNEY,  
Commissioners.

JAMES F. QUIGLEY,  
Clerk.

f19,m2

## SECOND DEPARTMENT.

In the matter of the application of The City of New York relative to acquiring title, wherever the same has not been heretofore acquired, to the lands, tenements and hereditaments required for the opening and extending of BAY RIDGE PARKWAY, between Sixty-sixth street and Sixty-seventh street, and extending from a few feet east of Ninth avenue for a distance of 434 feet to a point about midway between Eighth and Ninth avenues, in the Thirtieth Ward, Borough of Brooklyn, City of New York.

**WE, THE UNDERSIGNED COMMISSIONERS** of Estimate and Assessment in the above-entitled matter, hereby give notice to all persons interested in this proceeding, and to

the owner or owners, occupant or occupants of all houses and lots and improved and unimproved lands affected thereby, and to all others whom it may concern, to wit:

First—That we have completed our estimate of damage, and that all persons interested in this proceeding, or in any of the lands, tenements and hereditaments and premises affected thereby, and having objections thereto, do present their said objections in writing, duly verified, to us at our office, No. 166 Montague street, in the Borough of Brooklyn, in The City of New York, on or before the 9th day of March, 1908, and that we, the said Commissioners, will hear parties so objecting, and for that purpose will be in attendance at our said office on the 11th day of March, 1908, at 3 o'clock p. m.

Second—That the abstracts of our said estimate of damage, together with our damage maps, and also all the affidavits, estimates, proofs and other documents used by us in making the same, have been deposited in the Bureau of Street Openings in the Law Department of The City of New York, No. 166 Montague street, in the Borough of Brooklyn, in said City, there to remain until the 17th day of March, 1908.

Third—That, provided there be no objections filed to said abstract, our final report herein will be presented for confirmation to the Supreme Court of the State of New York, Second Department, at a Special Term thereof for the hearing of motions, to be held in the County Court House in the Borough of Brooklyn, in The City of New York, on the 20th day of April, 1908, at the opening of the Court on that day.

Fourth—In case, however, objections are filed to said abstract of estimate of damage, the notice of motion to confirm our final report herein will stand adjourned to the date to be hereafter specified, and of which notice will be given to all those who have theretofore appeared in this proceeding, as well as by publication in the City Record and in the corporation newspapers, pursuant to sections 981 and 984 of the Greater New York Charter, as amended by chapter 658 of the Laws of 1906.

Dated Borough of Brooklyn, New York, February 18, 1908.

J. EDW. SWANSTROM,  
Chairman;  
ROBERT STEWART,  
ARCHIBALD J. QUAIL,  
Commissioners.

JAMES F. QUIGLEY,  
Clerk.

## SECOND DEPARTMENT.

In the matter of the application of The City of New York relative to acquiring title, wherever the same has not been heretofore acquired, to the lands, tenements and hereditaments required for the opening and extending of FORTY-SEVENTH STREET, from Eighteenth avenue to Gravesend avenue, in the Thirtieth Ward, Borough of Brooklyn, City of New York.

**WE, THE UNDERSIGNED COMMISSIONERS** of Estimate and Assessment in the above-entitled matter, hereby give notice to all persons interested, and to the owner or owners, occupant or occupants of all houses and lots and improved and unimproved lands affected thereby, and to all others whom it may concern, to wit:

First—That we have completed our estimate and assessment, and that all persons interested in this proceeding, or in any of the lands, tenements and hereditaments and premises affected thereby, and having objections thereto, do present their said objections in writing, duly verified, to us at our office, No. 166 Montague street, in the Borough of Brooklyn, in The City of New York, on or before the 9th day of March, 1908, and that we, the said Commissioners, will hear parties so objecting, and for that purpose will be in attendance at our said office on the 10th day of March, 1908, at 2 o'clock p. m.

Second—That the abstracts of our said estimate and assessment, together with our damage and benefit maps, and also all the affidavits, estimates, proofs and other documents used by us in making the same, have been deposited in the Bureau of Street Openings in the Law Department of The City of New York, No. 166 Montague street, in the Borough of Brooklyn, in said City, there to remain until the 17th day of March, 1908.

Third—That the limits of our assessment for benefit include all those lands, tenements and hereditaments and premises situate, lying and being in the Borough of Brooklyn, in The City of New York, which, taken together, are bounded and described as follows, viz:

Beginning at a point formed by the intersection of the westerly line of Gravesend avenue and southerly line of Eighteenth avenue, and running thence southerly along said westerly line of Gravesend avenue to its intersection with the northerly line of Avenue I; thence westerly along said northerly line of Avenue I to its intersection with the easterly line of West street, and thence northerly along said easterly line of West street to its intersection with the northerly prolongation of the northerly line of Forty-eighth street; thence northwesterly along said prolongation and northerly line of Forty-eighth street to its intersection with the southerly side of Nineteenth avenue; thence northerly to a point formed by the intersection of the northerly line of Nineteenth avenue with the centre line of the blocks between Forty-seventh and Forty-eighth streets; thence northerly along said centre line to its intersection with the southerly line of Eighteenth avenue; thence northerly and easterly along said southerly line of Eighteenth avenue to the point or place of beginning, as such area is shown on the benefit maps deposited as aforesaid.

Fourth—That, provided there be no objections filed to either of said abstracts, our final report herein will be presented for confirmation to the Supreme Court of the State of New York, Second Department, at a Special Term thereof for the hearing of motions, to be held in the County Court House in the Borough of Brooklyn, in The City of New York, on the 20th day of April, 1908, at the opening of the Court on that day.

Fifth—In case, however, objections are filed to either of said abstracts of estimate and assessment, the notice of motion to confirm our final report herein will stand adjourned to the date to be hereafter specified, and of which notice will be given to all those who have theretofore appeared in this proceeding, as well as by publication in the City Record and in the corporation newspapers, pursuant to sections 981 and 984 of the Greater New York Charter, as amended by chapter 658 of the Laws of 1906.

Dated Borough of Brooklyn, February 18, 1908.

THEODORE B. GATES,  
Chairman;  
R. H. ABERCROMBIE,  
ARTHUR R. SEWARD,  
Commissioners.

JAMES F. QUIGLEY,  
Clerk.

## SECOND DEPARTMENT.

In the matter of the application of The City of New York relative to acquiring title, wherever the same has not been heretofore acquired, to the lands, tenements and hereditaments required for the opening and extending of FIFTIETH STREET, from the old City line to New Utrecht avenue, in the Thirtieth Ward, Borough of Brooklyn, City of New York.

WE, THE UNDERSIGNED COMMISSIONERS of Estimate and Assessment in the above-entitled matter, hereby give notice to all persons interested in this proceeding, and to the owner or owners, occupant or occupants of all houses and lots and improved and unimproved lands affected thereby, and to all others whom it may concern, to wit:

First—That we have completed our estimate and assessment, and that all persons interested in this proceeding, or in any of the lands, tenements and hereditaments and premises affected thereby, and having objections thereto, do present their said objections in writing, duly verified, to us at our office, No. 166 Montague street, in the Borough of Brooklyn, in the City of New York, on or before the 9th day of March, 1908, and that we, the said Commissioners, will hear parties so objecting, and for that purpose will be in attendance at our said office on the 10th day of March, 1908, at 11 o'clock a. m.

Second—That the abstracts of our said estimate and assessment, together with our damage and benefit maps, and also all the affidavits, estimates and proofs and other documents used by us in making the same, have been deposited in the Bureau of Street Openings in the Law Department of The City of New York, No. 166 Montague street, in the Borough of Brooklyn, in said City, there to remain until the 17th day of March, 1908.

Third—That the limits of our assessment for benefit include all those lands, tenements and hereditaments and premises situate, lying and being in the Borough of Brooklyn, in the City of New York, which, taken together, are bounded and described as follows, viz.:

Beginning at a point formed by the intersection of the westerly line of New Utrecht avenue and a line drawn parallel to and distant one hundred (100) feet southerly from the southerly line of Fiftieth street, and running thence northwesterly along said parallel line to its intersection with the old City line; thence northeasterly along said old City line to its intersection with a line drawn parallel to and distant one hundred (100) feet northerly from the northerly line of Fiftieth street; thence southeasterly along said last mentioned parallel line to its intersection with the westerly line of New Utrecht avenue; thence southerly along said last mentioned line to the point or place of beginning, as such area is shown upon our benefit maps, deposited as aforesaid.

Fourth—That, provided there be no objections filed to either of said abstracts, our final report herein will be presented for confirmation to the Supreme Court of the State of New York, Second Department, at a Special Term thereof for the hearing of motions, to be held in the County Court House in the Borough of Brooklyn, in the City of New York, on the 20th day of April, 1908, at the opening of the Court on that day.

Fifth—In case, however, objections are filed to either of said abstracts of estimate and assessment, the notice of motion to confirm our final report herein will stand adjourned to the date to be hereafter specified, and of which notice will be given to all those who have theretofore appeared in this proceeding, as well as by publication in the CITY RECORD and in the corporation newspapers, pursuant to sections 981 and 984 of the Greater New York Charter, as amended by chapter 658 of the Laws of 1906.

Dated Borough of Brooklyn, New York, February 18, 1908.

A. I. NOVA, Chairman;  
GEO. E. GLENDENNING,  
OTTO WETZEL, Commissioners.

JAMES F. QUIGLEY, Clerk.

## SECOND DEPARTMENT.

In the matter of the application of The City of New York, relative to acquiring title, wherever the same has not been heretofore acquired, to the lands, tenements and hereditaments required for the opening and extending of CHARLES AVENUE (although not yet named by proper authority), from Richmond avenue to Nicholas avenue, in the Third Ward, Borough of Richmond, City of New York.

NOTICE IS HEREBY GIVEN THAT THE supplemental and additional bill of costs, charges and expenses incurred by reason of the proceedings in the above-entitled matter will be presented for taxation to one of the Justices of the Supreme Court of the State of New York, Second Department, at a Special Term thereof, to be held for the hearing of motions, at the County Court House in the Borough of Brooklyn, in the City of New York, on the 4th day of March, 1908, at 10.30 o'clock in forenoon of that day, or as soon thereafter as counsel can be heard thereon; and that the said bill of costs, charges and expenses has been deposited in the office of the Clerk of the County of Richmond, there to remain for and during the space of ten days, as required by the provisions of section 999 of the Greater New York Charter, as amended by chapter 466 of the Laws of 1901.

Dated Borough of Manhattan, New York, February 17, 1908.

WILLIAM T. CROAK,  
JOHN L. DERY, Commissioners.

JOHN P. DUNN, Clerk.  
f17,29

## SECOND DEPARTMENT.

In the matter of the application of The City of New York relative to acquiring title to HENRY STREET, from Ocean parkway to East Eighth street, in the Twenty-ninth Ward, in the Borough of Brooklyn, The City of New York.

NOTICE IS HEREBY GIVEN THAT WE, the undersigned, were appointed by an order of the Supreme Court, made and entered herein on the 12th day of November, 1907, and duly filed in the office of the Clerk of Kings County, a copy of which order was filed in the office of the Register of the County of Kings on the 7th day of December, 1907, and indexed in the Index of Conveyances in section 16, Blocks 53292, 53208, 53212, Commissioners of Estimate and Assessment for the purpose of making a just and equitable estimate of the loss and damage, if any, to the respective owners, lessees, parties and persons entitled to or interested in the lands and premises to be taken for the purpose of opening the said street or avenue, as particularly described in the petition of The City of New York, filed with said order in the office of the Clerk of Kings County, and for the

purpose of making a just and equitable assessment of the benefit of said street or avenue so to be opened to the respective owners, parties and persons respectively entitled to or interested in the lands and premises and not required for the purpose of opening said street or avenue, but benefited thereby, and of ascertaining and defining the district benefited by said assessment, and the extent and boundaries of the respective tracts and parcels of land participating in said benefit, and of performing the trusts and duties required of us by title 4 of chapter 17 of the Charter of The City of New York, and the acts or parts of acts supplementary thereto or amendatory thereof.

All parties and persons interested in the lands and premises taken or to be taken for the purpose of opening said street or avenue, or affected thereby, and having any claim or demand on account thereof, are hereby required to present the same, duly verified, to us, the undersigned Commissioners of Estimate and Assessment, at our office in the Bureau of Street Openings of the Law Department, No. 166 Montague street, Borough of Brooklyn, in the City of New York, with such affidavits or other proofs as the said owner or claimants may desire, within twenty days after date of this notice.

And we, the said Commissioners, will be in attendance at our said office on the 3d day of March, 1908, at 2 o'clock in the afternoon of that day, to hear the said parties and persons in relation thereto; and at such time and place, and at such further or other time and place as we may appoint, we will hear such owners in relation thereto and examine proofs of such claimant or claimants, or such additional proofs and allegations as may then be offered by such owner, or on behalf of The City of New York.

Dated, Borough of Brooklyn, The City of New York, February 6, 1908.

DAVID HIRSHFIELD,  
A. I. NOVA,  
CHAS. E. FISKE, Commissioners.

JAMES F. QUIGLEY, Clerk.

## SECOND DEPARTMENT.

In the matter of the application of The City of New York relative to acquiring title to SCOTT AVENUE, from Flushing avenue to St. Nicholas avenue, in the Twenty-seventh Ward, in the Borough of Brooklyn, The City of New York.

NOTICE IS HEREBY GIVEN THAT WE, the undersigned, were appointed by an order of the Supreme Court, made and entered herein on the 12th day of November, 1907, and duly filed in the office of the Clerk of Kings County, a copy of which order was filed in the office of the Register of the County of Kings on the 7th day of December, 1907, and indexed in the Index of Conveyances in section 10, Blocks 4797, 4798, 4801, 4802, 4803, Commissioners of Estimate and Assessment for the purpose of making a just and equitable estimate of the loss and damage, if any, to the respective owners, lessees, parties and persons entitled to or interested in the lands and premises to be taken for the purpose of opening the said street or avenue, as particularly described in the petition of The City of New York, filed with said order in the office of the Clerk of Kings County, and for the purpose of making a just and equitable assessment of the benefit of said street or avenue so to be opened to the respective owners, parties and persons respectively entitled to or interested in the lands and premises and not required for the purpose of opening said street or avenue, but benefited thereby, and of ascertaining and defining the district benefited by said assessment, and the extent and boundaries of the respective tracts and parcels of land participating in said benefit, and of performing the trusts and duties required of us by title 4 of chapter 17 of the Charter of The City of New York, and the acts or parts of acts supplementary thereto or amendatory thereof.

All parties and persons interested in the lands and premises taken or to be taken for the purpose of opening said street or avenue, or affected thereby, and having any claim or demand on account thereof, are hereby required to present the same, duly verified, to us, the undersigned Commissioners of Estimate and Assessment, at our office in the Bureau of Street Openings of the Law Department, No. 166 Montague street, Borough of Brooklyn, in the City of New York, with such affidavits or other proofs as the said owner or claimants may desire, within twenty days after date of this notice.

And we, the said Commissioners, will be in attendance at our said office on the 6th day of March, 1908, at 3.30 o'clock in the afternoon of that day, to hear the said parties and persons in relation thereto; and at such time and place, and at such further or other time and place as we may appoint, we will hear such owners in relation thereto and examine proofs of such claimant or claimants, or such additional proofs and allegations as may then be offered by such owner, or on behalf of The City of New York.

Dated Borough of Brooklyn, The City of New York, February 6, 1908.

HERBERT S. WORTHLEY,  
JACOB A. WILLIAMS,  
HARRY HOWARD DALE, Commissioners.

JAMES F. QUIGLEY, Clerk.

## SECOND DEPARTMENT.

In the matter of the application of The City of New York relative to acquiring title to EAST NINETY-FIFTH STREET, from East New York avenue to Rockaway avenue, in the Twenty-ninth and Thirty-second Wards, in the Borough of Brooklyn, The City of New York.

NOTICE IS HEREBY GIVEN, THAT WE, the undersigned, were appointed by an order of the Supreme Court, made and entered herein on the 12th day of November, 1907, and duly filed in the office of the Clerk of Kings County, a copy of which order was filed in the office of the Register of the County of Kings on the 7th day of December, 1907, and indexed in the Index of Conveyances in section 15, Blocks 4597, 4598, 4613, 4614, 4630, 4631, 4649, 4650, 4660, 4670, 4691, 4692, 4715, 4716, 4754, 4755, and section 24, Blocks 8112, 8113, 8120, 8121, 8127, 8128, 8144, 8145, 8163, 8164, 8182, 8183, 8202, 8203, 8221, 8222, 8240, 8241, 8259, 8260, 8278, 8279, 8297, 8298, 8317, 8318, Commissioners of Estimate and Assessment for the purpose of making a just and equitable estimate of the loss and damage, if any, to the respective owners, lessees, parties and persons entitled to or interested in the lands and premises to be taken for the purpose of opening the said street or avenue, as particularly described in the petition of The City of New York, filed with said order in the office of the Clerk of Kings County, and for the

purpose of making a just and equitable assessment of the benefit of said street or avenue so to be opened to the respective owners, parties and persons respectively entitled to or interested in the lands and premises and not required for the purpose of opening said street or avenue, but benefited thereby, and of ascertaining and defining the district benefited by said assessment, and the extent and boundaries of the respective tracts and parcels of land participating in said benefit, and of performing the trusts and duties required of us by title 4 of chapter 17 of the Charter of The City of New York, and the acts or parts of acts supplementary thereto or amendatory thereof.

All parties and persons interested in the lands and premises taken or to be taken for the purpose of opening said street or avenue, or affected thereby, and having any claim or demand on account thereof, are hereby required to present the same, duly verified, to us, the undersigned Commissioners of Estimate and Assessment, at our office in the Bureau of Street Openings of the Law Department, No. 166 Montague street, Borough of Brooklyn, in the City of New York, with such affidavits or other proofs as the said owner or claimants may desire, within twenty days after date of this notice.

And we, the said Commissioners, will be in attendance at our said office on the 5th day of March, 1908, at 2.30 o'clock in the afternoon of that day, to hear the said parties and persons in relation thereto; and at such time and place, and at such further or other time and place as we may appoint, we will hear such owners in relation thereto and examine proofs of such claimant or claimants, or such additional proofs and allegations as may then be offered by such owner, or on behalf of The City of New York.

Dated Borough of Brooklyn, The City of New York, February 6, 1908.

FRANCIS S. McDIVITT,  
WM. H. TAYLOR,  
JOS. H. BREAZNELL, Commissioners.

JAMES F. QUIGLEY, Clerk.

## SUPREME COURT—NINTH JUDICIAL DISTRICT.

NINTH JUDICIAL DISTRICT, WESTCHESTER COUNTY.

HILL VIEW RESERVOIR.

Section No. 1.

In the matter of the application and petition of J. Edward Simmons, Charles N. Chadwick and Charles A. Shaw, constituting the Board of Water Supply of The City of New York, to acquire real estate for and on behalf of The City of New York, under chapter 724 of the Laws of 1905 and the acts amendatory thereof, in the City of Yonkers, Westchester County, N. Y., for the purpose of providing an additional supply of pure and wholesome water for the use of The City of New York.

PUBLIC NOTICE IS HEREBY GIVEN that the first separate report of George N. Rigby, Bernard F. Martin and James P. Appar, Commissioners of Appraisal herein, appointed on May 4, 1907, was filed in the office of the County Clerk of Westchester County on January 17, 1908.

Notice is further given that an application will be made at a Special Term of the Supreme Court, in and for the Ninth Judicial District, to be held at the Court House at White Plains, N. Y., on the 7th day of March, 1908, at 10 o'clock in the forenoon of that day, or as soon thereafter as counsel can be heard, for an order confirming said report, and for such other and further relief as to the Court shall seem just and proper.

Dated February 6, 1908.  
FRANCIS KEY PENDLETON,  
Corporation Counsel.  
Hall of Records, Corner Chambers and Centre Streets, New York City.

## NINTH JUDICIAL DISTRICT, WESTCHESTER COUNTY.

CATSKILL AQUEDUCT.

Section No. 1.

Yorktown and Cortlandt, Westchester County.

In the matter of the application and petition of J. Edward Simmons, Charles A. Shaw and Charles N. Chadwick, constituting the Board of Water Supply of The City of New York, to acquire real estate for and on behalf of The City of New York, under chapter 724 of the Laws of 1905 and the acts amendatory thereof, in the Towns of Yorktown and Cortlandt, Westchester County, N. Y., for the purpose of providing an additional supply of pure and wholesome water for the use of The City of New York.

PUBLIC NOTICE IS HEREBY GIVEN that the fourth separate report of Edward G. Whitaker, William C. Kellogg and Arthur W. Lawrence, Commissioners of Appraisal in the above entitled proceeding, appointed by an order of the Supreme Court, dated January 19, 1907, was filed in the office of the County Clerk of Westchester County, February 6, 1908.

Said report includes parcels of land shown on the map in this proceeding, filed in the office of the Register of Westchester County on October 17, 1906, as Map No. 1665, designated thereon as Parcels 7, 11, 16, 22, 29, 37, 38, 39, 41, 43 and 50.

Notice is further given that an application will be made at a Special Term of the Supreme Court, held in and for the Ninth Judicial District, at the Court House, in White Plains, N. Y., on the 7th day of March, 1908, at 10 o'clock in the forenoon of that day, or as soon thereafter as counsel can be heard, for an order confirming said report, and for such other and further relief as to the Court may seem just and proper.

Dated February 6, 1908.  
FRANCIS KEY PENDLETON,  
Corporation Counsel.  
Office and Post-office Address, Hall of Records, Corner Chambers and Centre Streets, New York City.

## PROPOSALS FOR BIDS AND ESTIMATES FOR THE CITY OF NEW YORK.

## NOTICE TO CONTRACTORS.

## GENERAL INSTRUCTIONS TO BIDDERS.

The person or persons making a bid or estimate for any services, work, materials or supplies for The City of New York, or for any of its departments, bureaus or offices, shall furnish the same in a sealed envelope, indorsed with the title of the supplies, materials, work or services for which the bid or estimate is made, with his or their name or names and the date of presentation to the President or Board or to the head of the Department at his or its office, on or before the date and hour named in the advertisement for the same, at which time and place the estimates received will be publicly opened by the President or Board or head of said Department and read, and the award of the contract made according to law as soon thereafter as practicable.

Each bid or estimate shall contain the name and place of residence of the person making the same, and names of all persons interested with him therein, and, if no other person be so interested, it shall distinctly state that fact; also, that it is made without any connection with any other person making an estimate for the same purpose, and is in all respects fair and without collusion or fraud, and that no member of the Board of Aldermen, head of a department, chief of a bureau, deputy thereof, or clerk therein, or other officer of The City of New York is, shall be or become interested, directly or indirectly, as contracting party, partner, stockholder, surety or otherwise in or in the performance of the contract, or in the supplies, work or business to which it relates, or in any portion of the profits thereof. The bid or estimate must be verified by the oath, in writing, of the party or parties making the estimate that the several matters stated herein are in all respects true.

Each bid or estimate shall be accompanied by the consent, in writing, of two householders or freeholders in The City of New York, or of a guaranty or surety company duly authorized by law to act as surety, and shall contain the matters set forth in the blank forms mentioned below.

No bid or estimate will be considered unless, as a condition precedent to the reception or consideration of any proposal, it be accompanied by a certified check upon one of the State or National banks of The City of New York, drawn to the order of the Comptroller, or money to the amount of five per centum of the amount of the bond required, as provided in section 420 of the Greater New York Charter.

The certified check or money should not be inclosed in the envelope containing the bid or estimate, but should be either inclosed in a separate envelope addressed to the head of the Department, President or Board, or submitted personally upon the presentation of the bid or estimate.

For particulars as to the quantity and quality of the supplies, or the nature and extent of the work, reference must be made to the specifications, schedules, plans, etc., on file in the said office of the President, Board or Department.

No bid shall be accepted from or contract awarded to any person who is in arrears to The City of New York upon debt or contract, or who is a defaulter, as surety or otherwise, upon any obligation to the City.

The contract must be bid for separately. The right is reserved in each case to reject all bids or estimates if it is deemed to be for the interest of the City so to do.

Bidders will write out the amount of their bids or estimates in addition to inserting the same in figures.

Bidders are requested to make their bids or estimates upon the blank forms prepared and furnished by the City, a copy of which, with the proper envelope in which to inclose the bid, together with a copy of the contract, including the specifications, in the form approved by the Corporation Counsel, can be obtained upon application therefor at the office of the Department for which the work is to be done. Plans and drawings of construction work may also be seen there.

# THE CITY RECORD.

## OFFICIAL JOURNAL OF THE CITY OF NEW YORK.

There shall be published daily, Sundays and legal holidays excepted, under a contract to be made as hereinafter provided, a paper to be known as the CITY RECORD. And said CITY RECORD, and the newspapers now by law designated as corporation newspapers in the present City of Brooklyn, shall be the only papers to be included within the term corporation newspapers, as the same is used anywhere in this act; . . . There shall be inserted in said CITY RECORD nothing aside from such official matters as are expressly authorized. . . . All advertising required to be done for the City, except as in this act otherwise specially provided, and all notices required by law or ordinance to be published in corporation papers, shall be inserted at the public expense only in the CITY RECORD, and the publication therein shall be a sufficient compliance with any law or ordinance requiring publication of such matters or notices. . . . The Comptroller shall cause a continuous series of the CITY RECORD to be bound as completed, quarterly, and to be deposited with his certificate thereon in the office of the Register of Deeds of the County of New York in the County Clerk's office of said County, and in the office of the City Clerk, and copies of the contents of any of the same, certified by such Register, County Clerk or City Clerk, shall be received in judicial proceedings as prima facie evidence of the truth of the contents thereof.—§1526, Greater New York Charter.

## FEBRUARY, 1908.

VOL. XXXVI.

PART II.

### BOARD OF CITY RECORD:
