Review

Dear MR. SEARPAUSKI

I am an active member of the United Forties Civic Association and wish to express my feelings about the following conditions. The areas on both sides of the Newtown Creek have been subjected to all kinds of pollution and contamination for the past one hundred years. The creek has been contaminated to such an extent, that there is no life form that can exist in it's waters. In addition to the pollution and contamination, the residents have been subjected to the most foul odors and smells emanating from such manufacturing plants as Phelps Dodge, Van Idersteins, Sea Foo Fat, and many others.

I believe with many other residents that we have been a dumping ground for all unwanted businesses for too long a period (100 Yrs.) There are at present several proposals being considered for this area. The Cross Harbor Tunnel with an adjoining Intermodal at the old Phelps Dodge site, would bring more heavy truck traffic in our already saturated area and bring with it more noise and air pollution. There is also another proposal on the table for a Department of Sanitation solid waste facility on Review Avenue, to alleviate the shipment of solid waste by truck and ship it by rail or barge from that facility. We are told it will only handle waste from our area, but politics being what it is we will end up handling the waste from the borough or possibly the city.

I have researched these proposals and can only come to the conclusion that the city intends to keep this area as a "dumping ground". The Cross Harbor Tunnel project will provide rail transport to the Maspeth area (Phelps Dodge) of huge ship containers from the New Jersey ports to be further transported by truck to New England and Long Island. This will result in thousands of trucks entering and leaving this area every day, and absolutely no one will keep these trucks on designated "truck routes". This heavy trucking will eventually cut through our residential areas, in order to avoid congested truck routes. These same containers will assuredly not be returning empty and therefore I feel it safe to assume that they will be filled with the solid waste from the D. of S. facility and shipped out by rail from the Maspeth intermodal. This has to result in eventually our receiving

a great deal of the city's waste to be shipped out from this facility and again subjecting the residents to noise, pollution and odors that will affect the environment and quality of life. You have undoubtedly heard of the opposition to these proposals as shown by the large billboard sign alongside the Long Island Expressway advising people to call Mr. Nadler and express their opposition to his proposals. Mr. Nadler takes the heavy traffic from his area and is trying to dump it in ours. The residents of this area have had enough and will not stand for being stepped on again and again and THEY WILL VOTE ACCORDINGLY.

Respectfully yours

GUS AMATO

These same containers will assuredly not be returning empty and therefore I feel it safe to assume that they will be filled with the solid waste from the D. of S. facility and shipped out by rail from the Maspeth intermodal. This has to result in eventually our receiving

a great deal of the city's waste to be shipped out from this facility and again subjecting the residents to noise, pollution and odors that will affect the environment and quality of life. You have undoubtedly heard of the opposition to these proposals as shown by the large billboard sign alongside the Long Island Expressway advising people to call Mr. Nadler and express their opposition to his proposals. Mr. Nadler takes the heavy traffic from his area and is trying to dump it in ours. The residents of this area have had enough and will not stand for being stepped on again and again and THEY WILL VOTE ACCORDINGLY.

Respectfully yours

Sherman McDowell

Dear Mr. Searpanski

I am an active member of the United Forties Civic Association and wish to express my feelings about the following conditions. The areas on both sides of the Newtown Creek have been subjected to all kinds of pollution and contamination for the past one hundred years. The creek has been contaminated to such an extent, that there is no life form that can exist in it's waters. In addition to the pollution and contamination, the residents have been subjected to the most foul odors and smells emanating from such manufacturing plants as Phelps Dodge, Van Idersteins, Sea Foo Fat, and many others.

I believe with many other residents that we have been a dumping ground for all unwanted businesses for too long a period (100 Yrs.) There are at present several proposals being considered for this area. The Cross Harbor Tunnel with an adjoining Intermodal at the old Phelps Dodge site, would bring more heavy truck traffic in our already saturated area and bring with it more noise and air pollution. There is also another proposal on the table for a Department of Sanitation solid waste facility on Review Avenue, to alleviate the shipment of solid waste by truck and ship it by rail or barge from that facility. We are told it will only handle waste from our area, but politics being what it is we will end up handling the waste from the borough or possibly the city.

I have researched these proposals and can only come to the conclusion that the city intends to keep this area as a "dumping ground". The Cross Harbor Tunnel project will provide rail transport to the Maspeth area (Phelps Dodge) of huge ship containers from the New Jersey ports to be further transported by truck to New England and Long Island. This will result in thousands of trucks entering and leaving this area every day, and absolutely no one will keep these trucks on designated "truck routes". This heavy trucking will eventually cut through our residential areas, in order to avoid congested truck routes. These same containers will assuredly not be returning empty and therefore I feel it safe to assume that they will be filled with the solid waste from the D. of S. facility and shipped out by rail from the Maspeth intermodal. This has to result in eventually our receiving

a great deal of the city's waste to be shipped out from this facility and again subjecting the residents to noise, pollution and odors that will affect the environment and quality of life. You have undoubtedly heard of the opposition to these proposals as shown by the large billboard sign alongside the Long Island Expressway advising people to call Mr. Nadler and express their opposition to his proposals.
