be, on account of the necessity of providing for the explanation and constant of the necessary, changes of temperature. It was necessary, at distances of about one hundred feet apart lengthwise, to have openings called expansion joints. Through these the water now runs after a heavy rain. It is proposed to place at these points inoughs of iron, like the caves gatters of houses, and carry the water to a downlall pipe, so that it will not inconvenience the public. Drainage holes have been left in the buckle plates also, but very little water dops through at such places. In reference to the argestion that the scame of the store pavement should have been filled with hot a-phalt and gravel, I have to report that they were so filled, and that the pavement is not rateoled.

NEW YORK, October 27, 1898.

To President, Board of Alderson, New York City: GRAVITERTN---It is not generally understood that the grade of sidewalks from house line to could line is fixed by ordinance or law, namely, two inches in every ten fost, three inches in fiftnem net and so on. There are many sidewalks laid in the Twenty-third Ward that exceed the above limit so far that it is impossible to keep your feet under you in frosty and cold weather. Many persons are thereby mained and loguest for life, and the City is multired in heavy damages. Your careful consideration is arged that the proper remody may be supplied.
