Citywide Administrative
Services

About DCAS

The Department of Citywide Administrative Services (DCAS) provides effective shared services to support the operations of New York City government. Its commitment to equity, effectiveness, and sustainability guides its work with City agencies on recruiting, hiring, and training employees; providing facilities management for 56 public buildings; acquiring, selling, and leasing City property; purchasing more than \$1 billion in supplies and equipment each year; and implementing conservation and safety programs throughout the City's facilities and vehicle fleet. DCAS manages a \$700 million annual energy supply budget and a \$2.7 billion 10-year capital budget to develop and implement programs to achieve the City's *One City: Built to Last* strategy of an 80% reduction of greenhouse gas emissions by 2050. Learn more at nyc.gov/dcas

About the Division of Energy Management

The DCAS Division of Energy Management leads the City's energy conservation and sustainability efforts. It oversees more than 10,000 utility accounts for city government agencies across 4,000 public buildings. It implements creative solutions to reduce energy consumption, promote energy efficiency in public buildings, and to generate clean energy on City-owned properties.

Executive Summary

This report was prepared in compliance with the requirements of Local Law 45 of 2018 (LL45). LL45 requires the Department of Citywide Administrative Services (DCAS) to report on annual electricity and fossil fuel usage, real-time metering, and assessments of and improvements made to the envelopes of covered facilities for four years from the effective date of the law. This is the last of four reports required by LL45, as prepared by DCAS's Division of Energy Management (DEM).

LL45 defines a *covered facility* as a facility where the City pays for at least one electricity account which had a peak demand of at least 300 kilowatts (kW) over the past fiscal year (Fiscal Year 2021). There are 572 covered facilities as of the end of Fiscal Year 2021 that meet this requirement. The City owns a subset of those, representing 459 facilities in total; the remainder are leased spaces. Per the requirements of LL45, for all covered facilities, this report identifies: (a) their electricity usage over the past fiscal year and change in usage over the last five fiscal years; (b) if they have equipment that allows electricity to be measured and reported in near real-time, referred to as *real-time meters* (RTM);¹ and (c) if they do not have RTM, whether such equipment is “appropriate and practicable,”² and the expected installation timeline. For City-owned covered facilities, the report also includes the facilities’ fossil fuel and steam usage over the past fiscal year,³ the change in fossil fuel and steam usage over the last five fiscal years, if their facility envelopes

have been subject to an assessment within the last fiscal year, and any envelope improvement projects commenced, continued, or were completed within the last fiscal year.

For this report, DCAS collected utility billing data for electricity, natural gas, and steam usage and City agency-reported usage and purchasing records for heating fuel oil, site inspections for information on covered facilities’ RTM “appropriate and practicable” status, and RTM installation records. The report drew upon several data sources to identify facility envelope assessment status, including Local Law 87 energy audits, Deep Energy Retrofit Program reports, and Expenses for Conservation and Efficiency Leadership project reports.

¹ In this report, RTM refers to “electricity usage telemetry equipment” cited in LL45.

² In this report, RTM installation was not deemed “appropriate and practicable” if a covered facility’s electricity utility meter room was inaccessible, or if the agency was planning to relocate from the covered facility within the next four years, as reported in the initial agency survey.

³ Fossil fuels include heating fuel oil and natural gas. District steam also is presented as it is produced by the burning of fossil fuels locally.

For the relevant five fiscal year period,⁴ total electricity usage has decreased by 12% for covered facilities,⁵ and fossil fuel and steam usage has increased by one percent for City-owned covered facilities.⁶ Considering only those facilities that have electricity usage for all five previous fiscal years examined, electricity usage as a whole decreased 13%. For those City-owned covered facilities which had fossil fuel or steam usage for all the previous five fiscal years examined, fossil fuel and steam usage also increased one percent. At the facility level, 82% of all covered facilities decreased electricity usage over the past five fiscal years, while 17% of covered facilities increased their usage.⁷

Eighty-seven percent of the 572 covered facilities already have electricity RTM installed. RTM installation may be appropriate and practicable at an additional nine percent of covered facilities. Thus, 96% of covered facilities either have RTMs installed or are potentially viable for future installations, which accounts for approximately 70% of municipal load.⁸

Fifty-one City-owned covered facilities underwent facility envelope assessments

⁴ The last five fiscal years reported for electricity usage span Fiscal Years 2017 through 2021. Fiscal Year 2020 is the most recent year for which full heating oil data is currently available. As a result, Fiscal Years 2016 through 2020 are reported for fossil fuel plus steam usage to allow for comparability in reporting and presentation of the five fiscal year fossil fuel change.

⁵ Unless otherwise specified, all percentages are rounded to the nearest whole number.

⁶ LL45 excludes leased covered facilities from the population required to report fossil fuel usage.

⁷ One percent of covered facilities did not have electricity usage reported in all five fiscal years.

⁸ Seventy percent of municipal electrical load determined from DCAS utility billing records.

in Fiscal Year 2021. Forty-four envelope improvement projects commenced, continued, or completed in Fiscal Year 2021. Of those 44, 42 were completed in Fiscal Year 2021; and two were continued in Fiscal Year 2021.

Table 1 shows all covered facilities and City-ownership designation by City agency. Section 1 and **Appendix A** include information on covered facilities' electricity usage, and Section 2 and **Appendix B** include information on RTM status. For City-owned covered facilities, Section 3 and **Appendix C** include information on fossil fuel usage, Section 4 and **Appendix D** include information on facility envelope status, and Section 4 and **Appendix E** include information about envelope improvement projects.

Section 1. Electricity Usage

Context and Data Collection

Methodology

LL45 requires DCAS to report on electricity usage over the past fiscal year and the change in usage over the last five fiscal years for covered facilities. Data about electricity usage is drawn from monthly utility billing information. In this report, electricity usage consists of both grid electricity and onsite solar generation.^{9,10} Electricity usage data from Fiscal Years 2017 through 2021 were available for this report.

Electricity Usage Overview

- See **Table 2** for the summary of electricity usage data.
- Total electricity usage decreased 12% in the past five fiscal years for all covered facilities (572).¹¹ With respect to covered facilities that have had electrical usage for all five fiscal years reviewed (563 facilities total), electricity usage decreased 13%.¹²
- Eighty-two percent¹³ (468 facilities) of covered facilities decreased electricity usage over the past five fiscal years; 8% (45 facilities) increased their usage by up to 10%; 5% (26 facilities) increased their electricity usage between 11% to 24%; 4% (24 facilities) of covered facilities increased their usage at least 25%, and 2% (9 facilities) of covered facilities did not have electricity data for all five fiscal years (**Figure 1**).

- There is insufficient data to distinguish COVID-19 related effects on usage and to separate that from the underlying downward trend in electricity usage observed through Fiscal Year 2019.
- Seventeen percent (95 covered facilities) of all covered facilities experienced an increase in electrical usage. Factors such as facility functional changes and additions in square footage and plug load may have contributed to the increase; such data was not available for all facilities.

⁹ On-site solar installations began generating electricity at some covered facilities in Fiscal Year 2014.

¹⁰ For solar generation systems without operational data acquisition systems, the annual generation is estimated as kW-DC x 1100 sun-hours/year for New York City, based on National Renewable Energy Laboratory (NREL) sun-hour data and an industry standard 25% discount factor to account for losses from imperfect azimuth angle, soiling, shading, degradation, and even losses due to irradiation from pollution, inter alia. For these systems, estimated annual generation (kWh) is reported as the same in each year based on this methodology.

¹¹ Usage data in the report reflects actual billings; it has not been weather-normalized.

¹² Fiscal Year 2021 had a slightly warmer summer compared to the Fiscal Year 2017 base, based on Degree Days (DD). Fiscal Year 2021 had an increase of 2% in Cooling Degree Days (CDD) compared to Fiscal Year 2017. CDD is a monthly count of daily degrees above 65, when energy is needed for cooling and moving air around a building.

¹³ Percentages in this report are rounded to nearest 1%, which may yield cumulative totals greater than or less than 100%.

- Of the 95 facilities with increased usage, 25% (24 covered facilities) increased consumption 25% or more. Sixty-six percent of the 24 facilities had equivalent increases in the Fiscal Year 2020 LL45 report. Again, this is due to listed contributing factors in previous fiscal years. The increases in previous years effectively become the new baseline for these facilities that, as a result of increased square footage, increased functional use, and other factors led to an expected increase in electrical usage.
- The remaining 33% of the 24 covered facilities that experienced at least 25% increased electricity usage over the past five fiscal years were public schools. Increases in this instance were driven by increased ventilation requirements due to pandemic-mode operations at schools.
- **Appendix A** lists each facility's Fiscal Year 2021 electricity usage and change in usage over the past five fiscal years.

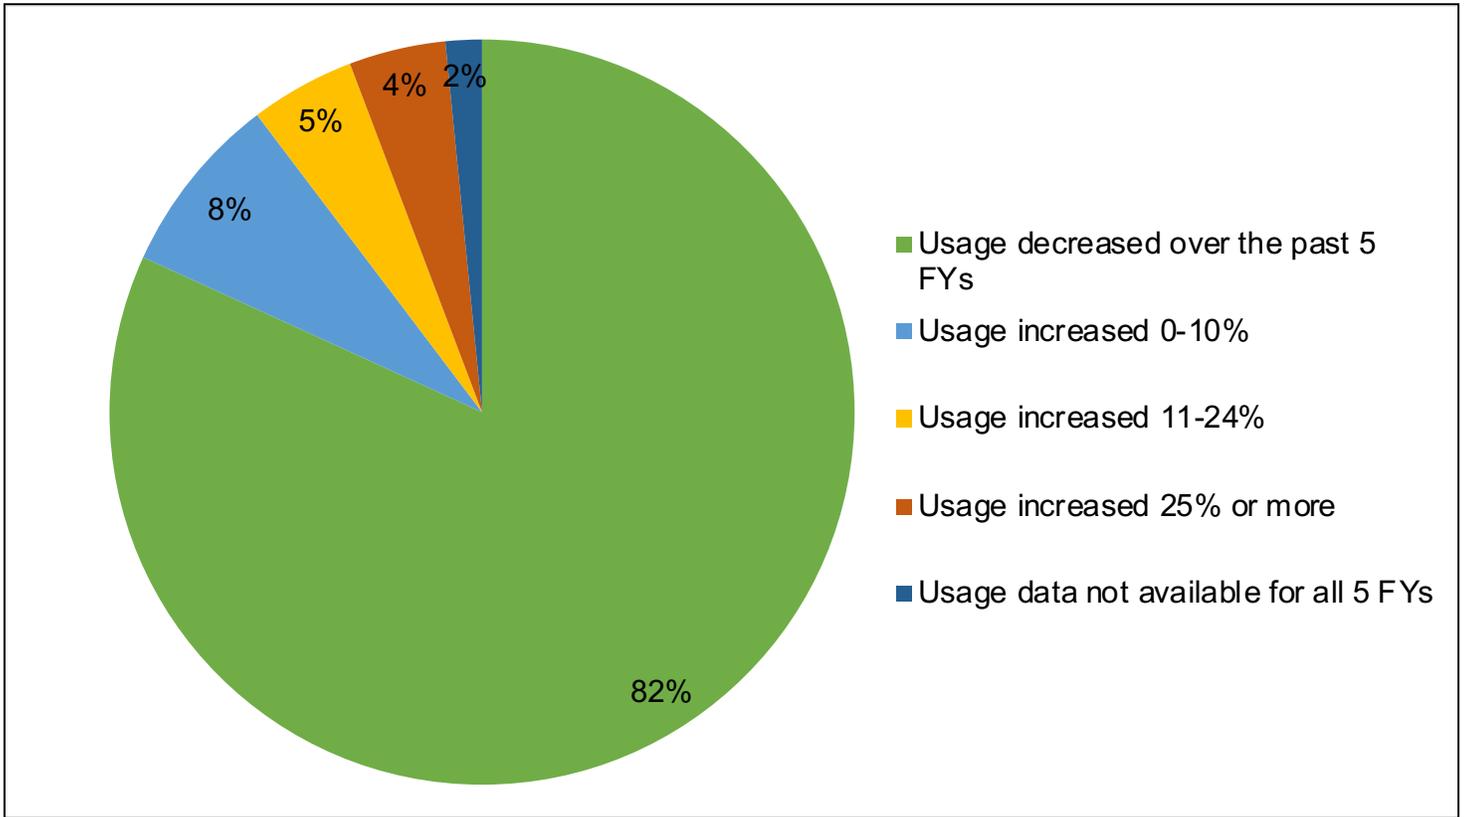

Table 2. Electricity Usage in Kilowatt-Hours for All Covered Facilities (572), Fiscal Years 2017-2021

	FY 2017	FY 2018	FY 2019	FY 2020	FY 2021	Change Over Last 5 FYs	Percentage Change Over Last 5 FYs
Grid Electricity Usage	2,677,721,021	2,642,575,383	2,587,961,704	2,395,793,835	2,348,994,104	-328,726,917	-12.3%
Solar Electricity Generation	6,867,632	7,064,436	6,622,655	7,408,418	7,473,386	605,753	8.8%
Total Electricity Usage	2,684,588,653	2,649,639,819	2,594,584,359	2,403,202,253	2,356,467,490	-328,121,164	-12.2%**

*Numbers rounded to the nearest 1 kWh

**Percent change using Fiscal Year 2017 as base year.

Figure 1. Electricity Usage Trends for All Covered Facilities, Fiscal Years 2017-2021

Section 2. Real-Time Metering Status

Context and Data Collection Methodology

LL45 requires DCAS to report on RTM status in covered facilities; specifically, which covered facilities have RTMs, whether RTM installation would be practicable and appropriate in those lacking RTMs, and, where installation is appropriate and practicable, in which fiscal year RTMs will be installed. Generally, RTMs are monitoring devices that automatically relay energy usage data from a utility meter to a digital centralized portal at regular, near real-time intervals. Facilities with RTMs installed now cover 70% of the City's manageable load.¹⁴

DCAS initially focused RTM installation efforts to support the Demand Response (DR) Program; more recently, DCAS has focused on expanding RTM installations to support enrollment in the Load Management (LM) Program. Through the DR Program, facilities reduce electric load during short-term periods of peak demand, to preserve grid reliability and limit the use of the most expensive, and often, the dirtiest, power plants. Through the newer LM Program, DCAS helps participating facilities identify additional time blocks in which they can reduce energy usage in addition to periods of peak demand. Through the LM Program, DCAS trains building operators to identify operational changes to their buildings that support efficient long-term energy management.¹⁵ In general, RTMs improve performance during DR events by providing near real-time information on the load amount that has been shed. For the LM program, electricity usage patterns

provided through RTMs are one important basis for both identifying potential savings periods and assessing the impacts of operational changes.

In Fiscal Year 2018, DCAS surveyed agencies to evaluate whether RTMs would be appropriate and practicable in covered facilities that do not yet have them. Since that survey, DCAS has conducted site surveys for nearly all covered facilities to determine the appropriateness and practicality of RTM installations. A small percentage of covered facilities still require a site inspection to determine whether RTM is appropriate and practicable.

Real-Time Metering Overview

- Of the 572 covered facilities, 87% (499 facilities) already have electricity RTM installed. This leaves a balance of 13% (73 facilities) that currently do not have installations (**Figure 2**).
- To date, of these 73 covered facilities without RTM installations, RTMs have been identified as appropriate and practicable for 54 facilities (74% of covered facilities without RTM installations). Twenty-two percent (16 facilities) of covered facilities without RTM installations indicated that RTM is not appropriate or practicable. The remaining 4% of the 73 facilities (three facilities) will require a site inspection,

¹⁴ Manageable load excludes electricity from street and traffic lighting.

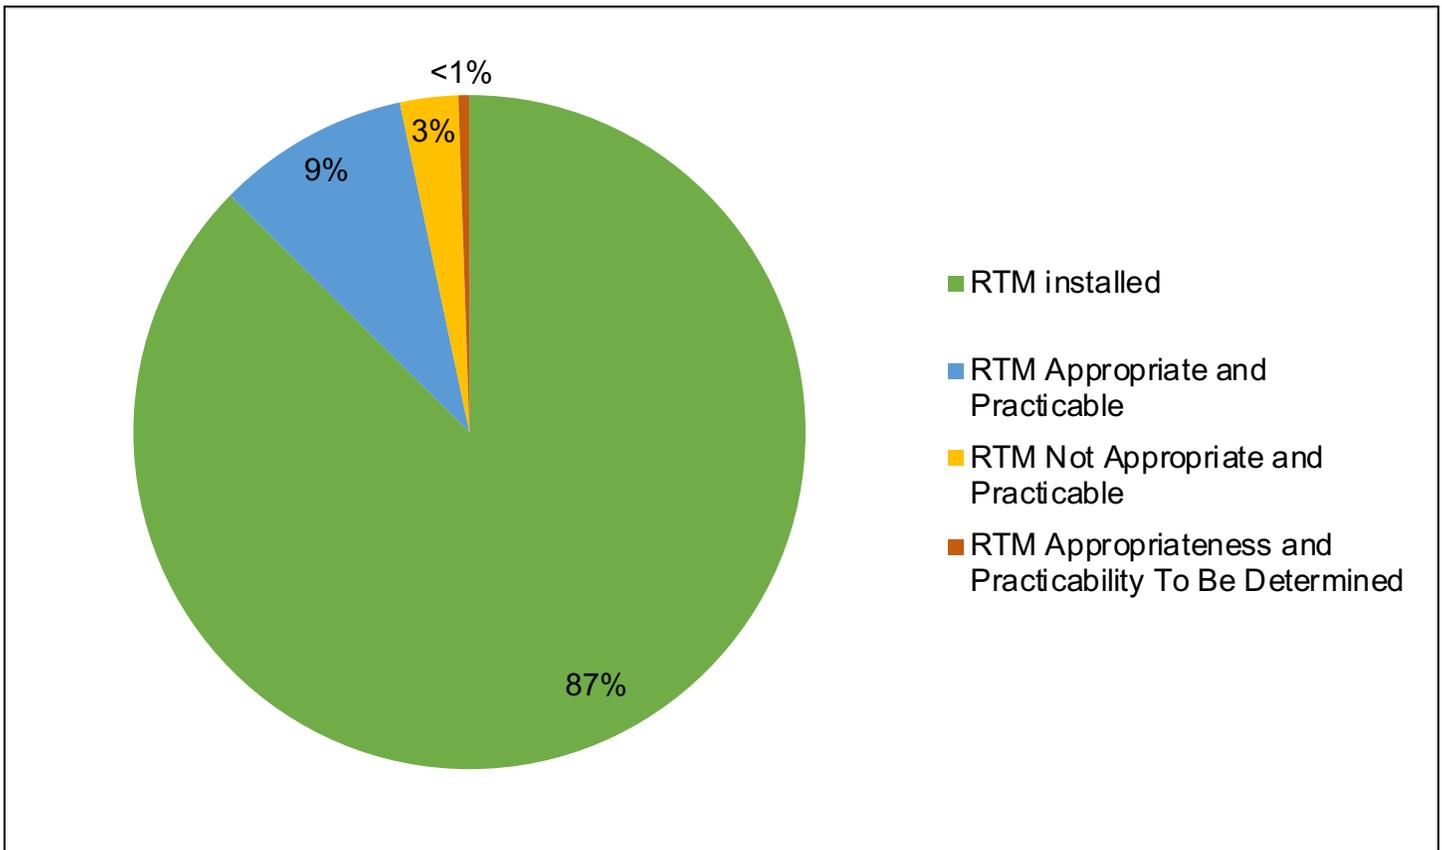

¹⁵ Changes may include, but not be limited to, adjusting heating and cooling setpoints; identifying and addressing simultaneous heating and cooling; and adjusting the operations schedule to perform functions during periods of lower overall energy demand.

so both the appropriateness and practicability of RTM and the potential schedule for installation can be determined. These site inspections will be scheduled in Fiscal Year 2022 and should be completed by the end of Fiscal Year 2022. Depending on the results of site surveys and current building usage, RTM installations,

where appropriate and practicable, are expected to be completed in Fiscal Year 2023.

- **Appendix B** includes the RTM status of each of the covered facilities for which electricity usage is reported.

Figure 2. RTM Status for All Covered Facilities

Section 3. Fossil Fuel and Steam Usage

Context and Data Collection Methodology

LL45 requires DCAS to report on fossil fuel use for the last fiscal year and change in usage over the last five fiscal years for City-owned covered facilities (459 total facilities). In this report, fossil fuels are defined as heating fuel oil (Fuel Oil Numbers 2, 4, 6) and natural gas. District steam usage from the Con Edison steam system is also included in this report because it is produced from fossil fuel combustion within New York City. Fossil fuels and steam primarily are used for heat and hot water in covered facilities. To curb criteria air pollutants,¹⁶ the City mandated the phasing out of heavy heating fuels (i.e., Fuel Oils Numbers 4 and 6),¹⁷ and has pursued efforts to switch facilities to natural gas and use oil as emergency back-up. Heavy fuel oil phase-out has reduced City CO₂ emissions by almost one million tons and PM_{2.5} emissions by 65% since 2011.¹⁸ Several covered facilities, such as schools and hospitals, still rely on Fuel Oil Number 2 for heating. New York City requires all fuel oil to be ultra-low sulfur with a minimum biodiesel content of five percent;¹⁹ this results in Fuel Oil Number 2 having 95% fewer PM_{2.5} emissions than those of now-phased-out Fuel Oil Number 6. As such, Fuel Oil Number 2 has a similar emission profile to that of natural gas.

Data on natural gas and district steam usage come from monthly utility billing information. For heating oil, some City agencies track their oil usage and report

usage to DCAS, while other heating oil data is derived from delivery reports. In this report, Fiscal Years 2016 through 2020 data are reported, since Fiscal Year 2020 is the most recent year for which full heating oil data is currently available. Natural gas and district steam usage are also reported for this period to allow for comparability in reporting and presentation of the five fiscal year fossil fuel change.

Fossil Fuel and Steam Usage Overview

- See **Table 3** for the fossil fuel and steam usage data summary for all covered facilities.

¹⁶ Criteria air pollutants, as defined by the U.S. Environmental Protection Agency, refer to ground-level ozone, fine particulate matter (PM_{2.5}), carbon monoxide, lead, sulfur dioxide, and nitrogen dioxide.

¹⁷ Local Law 43 of 2010, NYC Administrative Code Chapter 1 § 24-168.

¹⁸ Email communication from Milka Rodriguez (Mayor's Office of Climate & Sustainability) to Emily Poorvin (DCAS), 24 January 2020; "Inventory of New York City Greenhouse Gas Emissions," Mayor's Office of Sustainability, <https://nyc-ghg-inventory.cusp.nyu.edu/#data>.

¹⁹ Local Law 43 of 2010, NYC Administrative Code Chapter 1 § 24-169.

- Over the past five fiscal years, overall fossil fuel plus steam usage was close to level, increasing by one percent. Fossil fuel usage alone has increased by five percent. Steam usage has decreased by 14%; heating fuel oil usage has decreased 17%, reflecting the phasing out of Numbers 4 and 6 heavy fuel oils, while natural gas usage has increased by 13%, in part reflecting usage from locations that converted from fuel oil. Weather also contributed to the increase.^{20,21}
- For covered facilities which used fossil fuels or steam during each of the five fiscal years (425 facilities), overall fossil fuel and steam usage increased by one percent between Fiscal Years 2016 and 2020.
- See **Appendix C** for the table of fossil fuel usage and steam data.

²⁰ Fiscal Year 2020 had a markedly colder winter compared to that of Fiscal Year 2016, based on Degree Days. Fiscal Year 2020 had an increase of 11% in Heating Degree Days (HDD) compared to Fiscal Year 2016. HDD is a monthly count of daily degrees below 65, when energy is needed for heating and moving air around a building.

²¹ Given that only the last four months of Fiscal Year 2020 (March through June) overlapped with COVID-19-related facility occupancy changes, and only one of those months (March) is part of the six-month heating season, fossil fuel plus steam related usage changes in this report do not appear associated with COVID-19-related facility occupancy effects.

Table 3. Fossil Fuel and Steam Usage in MMBTU for All Covered Facilities, Fiscal Years 2016-2020

	FY 2016	FY 2017	FY 2018	FY 2019	FY 2020	Change Over Last 5 FYs	Percentage Change Over Last 5 FYs
Natural Gas	4,678,906	5,155,782	5,079,607	5,387,227	5,283,742	604,836	12.9%

Total Fossil Fuel + Steam Usage Percent Change from Previous Fiscal Year	n/a	5.3%	0.5%	3.3%	-7.5%	1.2%**	

*Numbers rounded to the nearest 1 MMBTU (Metric Million British Thermal Unit)

**Percent change using Fiscal Year 2016 as base year.

Section 4. Facility Envelope Assessment and Improvement Status

Context and Data Sources

LL45 requires DCAS to report on whether City-owned covered facilities have undergone facility envelope assessments and if any improvements to a facility's envelope commenced, continued, or completed during the previous fiscal year.²² This report interprets the terms *envelope assessment* and *envelope improvement* to refer to envelope thermal performance, defined as the capacity of a building's envelope to prevent undesired energy transfers between a building's interior environment and the exterior. Envelope thermal performance is a critical component to energy efficiency, as it serves to both reduce energy loss from inside a building, and temper influences from adverse external weather conditions on the building's interior environment, thereby reducing the amount of energy needed to maintain comfortable interior conditions.

Information on electricity usage, fossil fuel usage, and RTM installation status is collected by DCAS and its partner agencies. However, there is no comprehensive collection of information on statuses of envelope assessments or improvements across covered facilities. Therefore, DCAS has used information from the sources that are available.

Envelope Assessments

Overall, the available data sources can be grouped by those from which limited indirect thermal envelope performance information

may be inferred, and data sources that directly measure thermal performance. For this report, the indirect data sources used were Local Law 87 (LL87) energy audits. LL87 energy audits, conducted with DCAS's oversight for covered buildings that are 50,000 square feet and greater,²³ describe the condition of the audited structure's envelope based on visual observation; LL87 does not require a detailed or quantitative assessment of thermal performance. Forty-three City-owned covered facilities had energy audits associated with LL87 energy audits in Fiscal Year 2021, from which limited thermal performance may be inferred.

For this report in Fiscal Year 2021, a direct envelope data source was used: DCAS's Deep Energy Retrofit (DER) Program studies. Records from direct envelope data sources provide more detailed information about facilities' envelope thermal performance and other energy performance characteristics. The DER Program funds studies that describe the condition and quantify the approximate thermal performance of the studied building's major envelope elements. Some of these studies also include thermographic imaging to identify areas of high heat transfer and air or water infiltration (**Figure 3**).

The DER Program was established by DCAS in 2018 in response to Executive Order 26, and targets existing buildings with high

²² The facility envelope is the physical barrier between a building's interior environment and the exterior.

²³ Local Law 87 of 2009, NYC Administrative Code Chapter 3 §28-308.

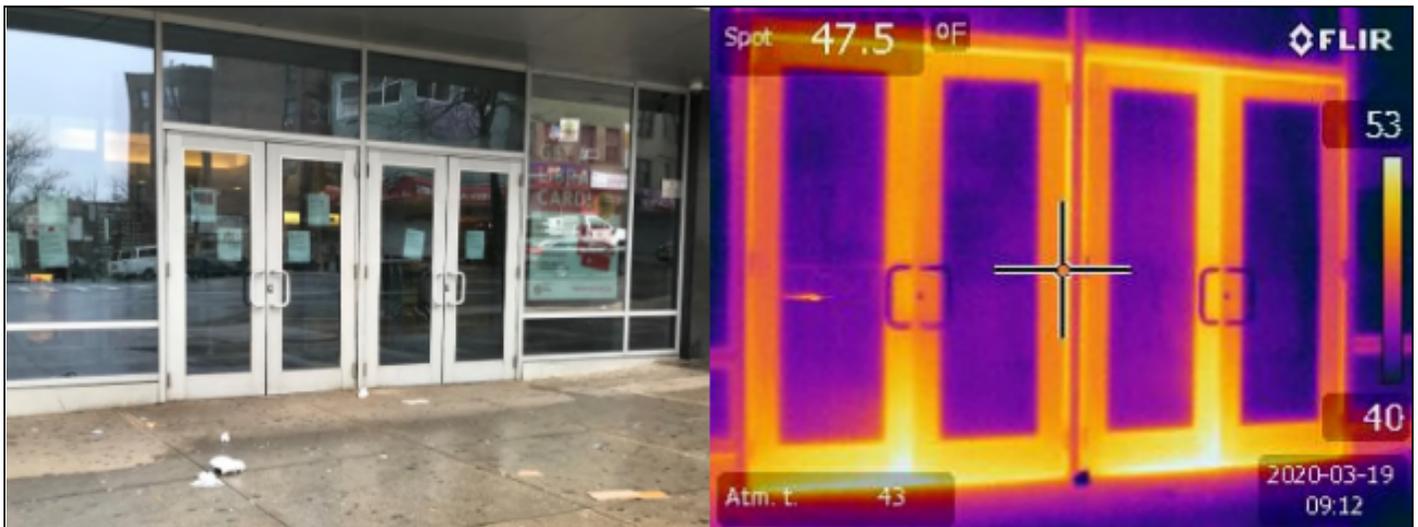

levels of greenhouse gas (GHG) emissions. During Fiscal Year 2019, DCAS continued our efforts within this Program, including drafting DER guidelines, which incorporate specific guidance on envelope assessments. Additionally, in Fiscal Year 2020, DCAS developed envelope assessment guidelines further detailing how envelopes should be studied above the requirements of the DER guidelines. The envelope assessment guidelines have been used for new studies scoped beginning in Fiscal Year 2021, as well as planned studies in upcoming fiscal years. The guidelines were identified as a crucial piece of documentation necessary to anticipate the needs of partner agencies and ensure proper assessment of City facilities. In Fiscal Year 2021, DCAS completed one DER study which is covered under this Local Law; this assessment was scoped in Fiscal Year 2020 before the envelope assessment guidelines were finalized.

The DER Program supports DCAS investments in major capital projects at the studied buildings. Lessons learned from such studies, such as the cost-effectiveness of triple-paned windows or the maximum

insulation that can be applied to the interior of a masonry façade without risking freeze-thaw damage, will also be applied to other energy projects undertaken by DCAS.

An additional source of data for envelope assessments for Fiscal Year 2021 came from the DCAS Expenses for Conservation and Efficiency Leadership (ExCEL) Program. The ExCEL Program is DCAS's largest competitive expense funding program for energy projects and awards funds for a variety of technical and non-technical project types including energy master plans, energy audits, and energy-related feasibility and design studies. The scale of the assessments awarded funding under the ExCEL Program varies based on the proposed project, so both direct and indirect envelope assessments are covered by the ExCEL Program. In Fiscal Year 2021, seven City-owned covered facilities had envelope assessments covered by the ExCEL Program with two of those being indirect assessments and five being direct assessments. **Appendix D** includes the envelope data discussed in this section.

Figure 3. Sample Thermographic Image of the Existing Bronx Library Façade

Thermographic image of exterior doors at the Bronx Library Center. The thermographic image shows two glass double doors with aluminum frames at the entrance to the library. Heat lost through the poorly insulated metal frames is shown in darker yellow; the bright yellow around the edges of the frames shows warm air leaking around the door where weather-stripping has worn away.

Envelope Improvements

Forty-four envelope improvement projects at City-owned covered facilities either commenced, continued, or completed in Fiscal Year 2021. Forty-two envelope improvement projects were completed in Fiscal Year 2021. Two envelope improvement projects were under construction in Fiscal Year 2021 at the time of this report. **Appendix E** includes information on envelope improvement projects.

Section 5. Conclusion

The City has made great progress in reducing its electric consumption over the last five fiscal years when taking into consideration portfolio growth using the City's annual budget as a proxy.²⁴

Between Fiscal Year 2016 and 2020, HDD increased 11%, which could lead to an expectation that significantly more fossil fuel and steam usage would be needed during this period. Despite the increased number of HDD, however, fossil fuel and steam usage remained relatively stable.

Nearly all covered facilities have RTM installed or will have RTM installed in the near future, and, currently, 70% of municipal electrical consumption is covered by RTMs.²⁵ The proliferation of RTMs is critical to helping DCAS's energy management programs. The DR Program uses RTM data to better track peak load reduction protocols during times of great stress on the grid. The LM Program uses RTM data to help identify and diagnose: a) potentially malfunctioning equipment which wastes energy and costs taxpayer dollars; and b) opportunities for more energy efficient operations in municipal buildings, which leads to more energy and cost savings.

Envelope improvement projects are complex and often intrusive enterprises with very long payback periods. However, in some instances such projects are needed to achieve deep decarbonization in buildings. To date, 168 improvement projects have been recommended and have either been completed or are in progress.

²⁴ "Fiscal History: Citywide Full-Time Employees & Total Expenditures Since 1980," Independent Budget Office of the City of New York, <https://ibo.nyc.ny.us/RevenueSpending/citywide-summary.html>.

²⁵ Eighty-seven percent of all covered facilities have RTM currently installed.

Appendix A: Covered Facilities' Electricity Usage

This appendix includes electricity usage information between Fiscal Years 2017 through 2021 for City-owned and City-leased covered facilities which had peak demand of 300 kW or more in Fiscal Year 2021. The last column is color-coded by usage change. For the last column, white indicates the covered facility was not using electricity in all five fiscal years; green indicates that the covered facility experienced a reduction in energy usage over the last five fiscal years; yellow indicates that the covered facility experienced an increase in energy usage of zero to 10%; orange indicates an increase in energy usage of 11 to 24%; and red indicates an increase in energy usage of 25% or more.

Facility	Address	Agency / Organization	City-Owned or Leased	Total Electricity (Utility+Solar), FY 2017	Total Electricity (Utility+Solar), FY 2018	Total Electricity (Utility+Solar), FY 2019	Total Electricity (Utility+Solar), FY 2020	Total Electricity (Utility+Solar), FY 2021	Change Over Last 5 FYs
