TCO	Temporary Certificate of Occupancy
VB	Vapor Barrier
VOCs	Volatile Organic Compounds

PHASE II WORK PLAN

1.0 INTRODUCTION

This Phase II Environmental Site Investigation (ESI) Work Plan and Health and Safety Plan (HASP) have been developed for Alma Realty Corp. for the site located at 8-01 26th Avenue, Astoria, New York 11102 in the Astoria section of Queens, New York (the Site). This project has been assigned project number OER Project number _____ by OER. This Work Plan describes the proposed investigation that will address the environmental concerns identified in the Phase I Environmental Site Assessment (ESA) report prepared for the Site by G. C. Environmental, Inc. dated 07/29/2013. The site-specific HASP (Appendix B) addresses potential hazards, contaminants of concern based on past use, and safety requirements associated with investigation activities, in accordance with ASTM and OSHA guidelines.

1.1 Site Location and Current Usage

The Site is located in the Astoria section of Queens, New York and is identified as Block 906, Lots 1 & 5; Block 907, Lots 1 & 8; Block 908, Lot 12; and Block 909, Lot 35 on the New York City Tax Map. Figure 1 is a Site Location map. The Site is 355,702 square feet and is comprised of six (6) parcels, developed with seven (7) buildings, which are as follows:

- a one-story warehouse with a mezzanine (Building A) in Parcel 3
- a one-story office/manufacturing building with a mezzanine and a partial basement (Building B) in Parcel 3
- a one-story warehouse with a partial basement (Building C) in Parcel 2
- a one-story warehouse (Building D) in Parcel 1
- a one-story office building (Building E) in Parcel 3
- a one-story manufacturing building (Building F) in Parcel 4
- a two-story manufacturing building (Building G) in Parcel 4

The Site is bounded by the East River to the north, 26th Avenue to the south, 9th Street to the east, and Commercial/Residential area, to the west. Currently, the Site is used by various tenants

for various uses, including Energex Wall Systems-manufacturer of stucco products, storage purposes, rigging, machine shop, scaffolding, lighting company, bus company and various commercial tenants.

1.2 Proposed Redevelopment Plan

The proposed action would facilitate a proposal by the applicant to construct a new mixed-use, predominantly residential, development on the approximately 377,726 square feet project site (the “proposed development”). The proposed development would include the following components:

- Up to approximately 1,701,126 gross square feet of residential floor area, comprised of a total of approximately 1,701 dwelling units, of which a minimum of 340 dwelling units (20 percent of residential floor area) would be affordable.
- Approximately 117,000 gross square feet of local retail space, including an approximately 25,000 gross square feet super market.
- An elementary school with approximately 456-seats (K-5)
- Approximately 940 accessory parking spaces
- Approximately 142,000 square feet of publicly accessible open space.

The 1,701 dwelling units are expected to include a mix of rental and condominium units. The proposed development is expected to be completed by 2023.

As part of the proposed action in conjunction with the proposed development, the mapped but unbuilt portion of 8th Street between 27th Avenue and the water front would be built out to provide pedestrian public access to the water front. In addition, the currently unimproved and inaccessible portion of 26th Avenue would also be built out in conjunction with the proposed development, thereby providing access to 9th Street and improving traffic circulation in the area. The applicant is also proposing the establishment of a public access easement within the Public Access area that would function as a public right-of-way. The applicant is also proposing to establish an extension of 4th Street from 26th Avenue to the water front esplanade to provide

public access to the proposed development and the waterfront. The site is currently zoned M1-1 north of 26th Avenue, and R-6 on the two upland lots south of 26th Avenue.

*Please note that the above is based on a preliminary concept design. The footprint and overall square footage of the building may change as concept design progresses.

1.3 Description of Surrounding Property

The Site is 355,702-square feet and bounded by the East River to the north, 26th Avenue to the south, 9th Street to the east, and Commercial/Residential area, to the west. Property use in the vicinity of the Property is primarily characterized by residential, commercial/manufacturing, and transportation, as well as vacant land.

According to New York City Department of Buildings, the additional addresses listed for the Property are 8-51 26th Avenue, 8-01 26th Avenue, 4-55 26th Avenue, 4-05 26th Avenue, 4-57 26th Avenue and 4-34 26th Avenue, Astoria, Queens, New York. According to the New York City Department of City Planning zoning map 9a, the Property is currently zoned as Manufacturing District MI-1.

2.0 PREVIOUS ENVIRONMENTAL DOCUMENTATION

2.1 Environmental Investigation Reports

The following environmental work plans and reports were developed for the Site:

Phase I Environmental Site Assessment, June 2006, prepared by G. C. Environmental, Inc.

Phase I Environmental Site Assessment, July 2013, prepared by G. C. Environmental, Inc.

Copies of the above referenced environmental work plans and reports are included in Appendix A.

2.2 Summary of Regulatory Correspondence

No pertinent regulatory correspondence related to the Site was found by GCE.

2.3 Phase I Summary

The Phase I report was prepared by G. C. Environmental, Inc. for Alma Realty Corp., (Mr. Dennis Moshopoulos) dated July/2013. This Phase I indentified eighteen (18) recognized environmental conditions (RECs):

This assessment has identified no evidence of *recognized environmental conditions (RECs)* in connection with the Property except for the following, and the following *conditions outside the scope of ASTM Practice E 1527-05* were identified in connection with the Property:

REC1- According to the Environmental Data Resources Report (EDR) dated July 16, 2013, Parcel 5 is included in “Underground Storage Tank (UST)” and “Historical Underground Storage Tank (HIST UST)” listings. The UST and HIST UST database listed the Parcel 5 property as “Superior Steel Studs Inc” under 4-57 26th Avenue, Astoria, New York. According to the New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage (PBS) database Parcel 5 was listed as Superior Steel Studs Inc. with PBS No. 2-305383, under 4-27 26th Avenue, Astoria, New York. No additional information is available for GCE’s review. According to the UST & HIST UST database and the NYSDEC PBS database, one (1) 4,000 gallon fuel oil UST was administratively closed at the property in 1996. No additional documentation was available for GCE’s review. The Parcel 5 property status listing in the UST and HIST UST database is considered to be a *recognized environmental condition*.

REC2- According to the Sanborn Maps provided by EDR dated July 16, 2013, there is one (1) gasoline tank listed as “GT” present inside the central portion of the existing Building E of Parcel 3. No additional information is available for GCE’s review. GCE did not get access to Building E during site inspection. According to Sanborn Maps, Building E was shown as “Auto Repair” from 1985-2006 maps. Furthermore, GCE’s review of the 1948, 1950, 1967, 1977, 1979 and 1981 Sanborn Fire Insurance maps indicate the presence of one (1) gasoline tank listed as “GT” of unknown size located within the asphalt-paved land on the southeastern exterior portion of the property, in close proximity to the east of Building E. GCE’s visual inspection revealed the presence of one (1) fill port, near steel plates on the southeastern exterior portion of Building E in Parcel 3. The historical potential presence of gasoline tanks and their usage may have

environmentally impacted Parcel 3 in general and is considered as a *recognized environmental condition*.

REC3- GCE's visual inspection revealed the presence of one (1) suspect fill port on the western interior portion of Building F in Parcel 4. No additional information is available for GCE's review. This portion of the building is currently utilized by Exterior Wall Supply. According to Sanborn Maps, Building F is historically utilized for Lumber Shed/Carpenter Shops. The historical potential presence of USTs and their usage may have environmentally impacted the Parcel 4 via USTs and is considered as a *recognized environmental condition*.

REC4- GCE's visual inspection revealed the presence of one (1) Above Ground Storage Tank of approximately 250-gallon, seen inside the tenant space of "Rainbow Transit" located on the northern portion of Building F in Parcel 4. GCE's visual inspection also revealed the presence of a machine/service shop for service of buses inside the building. Historical usage of service areas associated with the "Rainbow Transit" along with the AST may have environmentally impacted the Parcel 4 in general. This is considered to be a *recognized environmental condition*.

REC5- According to the Sanborn Maps provided by EDR on July 16, 2013, Parcel 4 Buildings F & G were identified as historical two (2)-story unidentified houses in 1898. The Building G is occupied with a "Planing Mill" and Building F was occupied with "Lumber/Carpenter Sheds" in 1915-1950. Buildings G & F were shown as occupied with wood working and machine shops. From 1967-1979. Wood working and Machine Shops were also shown from 1981-2006. Parcel 4 was listed as "Weisberg Baer Co sash trim" from 1934 to 1945, "Willys Plate Graining Corp", "Spaeth Displays Inc", "Intercoastal Door Corp", "Goldmark Plastic Compounds Inc" and "Century Laminated Prods Corp" in 1962, "Svce & Parts", "Royal Rose Range Co Inc", "Main Office", "Automatic Range Co Inc" in 1967 and 1970, "Federal Enterprises" in 1983, "Easyride Administration" and "Child Welfare Association" in 1991, "Retrospektiv", "Pstv Inflnc Fshns" and "Astron Iron Works" in 2000, "The Shop Inc", "Nova Star Electric Corp", "Floman Enterprises Inc", "Dalston NY Inc" and "Black Bull Corp" in 2007 and "Viv Contracting Corp", "Pancyprian Association Inc", "Envee Construction Inc", "Compsec Electric Corp", "Basset Inc", "B S Mechanical Contracting" and "Bay Contracting Corp" in 2012. According to the

New York City Building, Buildings F & G in Parcel 4 were constructed in c 1931. Taken together, these uses are considered to be a *recognized environmental condition*.

REC6- GCE's visual inspection revealed the presence of two (2) air stacks protruding from Building G which suggests wood manufacturing process was historically performed. In general, the main components generated from lumber and wood industry includes spent solvent-based adhesives, spent acetone, ammonia, spent bleaching agents, pigment wastes, boiler ash, dripped formulation mixed with rainwater and facility washdown water, kiln condensate, contact cooling water from surface protection and wood preserving processes etc. Historical property usages as "Wood Working" and "Lumber Storage/Planing Mill" may have environmentally impacted the Parcel 4 in general and are thus considered to be a *recognized environmental condition*.

REC7- According to the Sanborn Maps provided by EDR dated July 16, 2013, the Parcels 1, 2 and 3 (Buildings A, B, C, D & E) were identified as follows: Building A was occupied by "L Morton-Steam Stone" and "cutting and planing"; Building B was occupied by "Tisdale Lumber & Coal Yard" in 1898; a small dwelling and auto shop on the southern portion of Building A and Building B was occupied by "Geo. Brown & Co. Stream Stone Works" and developed with a historical one (1)-story cutting shed building; a historical one (1)-story stable, the existing Building B utilized for cutting and planing and office purposes in 1915; Building A was occupied by "Weisberg Baer Co-Sash Door Factory" and lumber shop; Building B as occupied by "Marcheth Marble Co, Inc- Machine Shop"; and in 1936 occupied by an unknown dwelling.

REC8- Buildings C & D were occupied by "Tisdale Lumber & Coal Yard" and developed with a historical two (2)-story building labeled "coal pockets" with an associated coal yard, a historical one (1)-story building utilized for the storage of shingles, several historical one (1) and two (2)-story lumber sheds and the remainder of the Site was utilized for the storage of lumber piles. the northern and eastern portions of the Site as occupied by Morey Machinery Co. Inc. and developed with the existing Buildings A, B, C, D and E, utilized for machinery and resembling purposes in 1948-1979. Buildings A, B, C, D and E and the southern portion of the Site as developed with a historical one (1)-story manufacturing building and occupied by "Superior

Steel Studs”. Taken together, these uses are considered to be a *recognized environmental condition*.

REC9- The 1985-2006 Sanborn shows Building E as occupied with “Auto Repair” facility. According to the New York City Building, Buildings A, B, C, D and E in Parcel 4 were constructed between c 1931 to 1943. The main contaminants generated from the metal manufacturing facilities include cutting oils, degreasing and cleaning solvents, acids, alkalis and heavy metals from metal cutting/forming process, solvents, emulsifying agents, acids and alkalis from surface preparation, acids, metals, solvents and paints from surface finishing process. Handling of chemicals from auto/service facilities may generate environmental pollution through activities associated with usual service work such as: the replacement of auto parts, oil changes, tune-ups and even through regular change of fluids (e.g., PCB’s, oil, transmission fluid). These repair/service activities introduce or have the potential to introduce contaminants (handled chemicals) in the environment through accidental spills or leaks, as well as through volatilization of the auto repair solvents during regular handling activities. Historical property usages as “Superior Steel Studs”, “Machine Shop”, “Auto Repair” and “Coal Yard/Door Factory” may have environmentally impacted the Parcel 4 in general and are thus considered to be a *recognized environmental condition*. #

REC10- Polychlorinated Biphenyls (PCBs) are a chemical component of dielectric fluids, coolants, or lubricating oils used in many types of equipment manufactured prior to 1979. Other equipment that may potentially contain PCBs includes hydraulically operated equipment, such as elevators, compaction equipment or manufacturing equipment. PCBs may have environmentally impacted the Site through historical usage of coolants/manufacturing equipment and is in consequence considered to be a *recognized environmental condition*.

REC11- According to the Sanborn Maps provided by EDR on July 16, 2013, Parcel 5 is used for storage of “Superior Studs Inc” and “Energex Wall Systems” manufacturing supplies. Parcel 6 is occupied for storage purposes. The 1948 sanborn map indicates that the adjacent property, to the eastern side of Parcel 6 property is occupied with “Metal Container Mfg”. GCE’s visual inspection revealed the storage of manufacturing supplies on Parcel 5. Historical property

usages as storage for manufacturing supplies may have environmentally impacted Parcels 5 and 6 in general and are thus considered to be a *recognized environmental condition*.

REC12- GCE's visual inspection revealed the presence of oil lines in Building C of Parcel 3. Historic USTs may have been present associated with the manufacturing process may have impacted Parcel 3 in general. This is considered to be a *recognized environmental condition*.

REC13- According to the prior Phase I report performed by GCE dated 2006, there is one (1) 5,000 gallon heating oil UST installed at the Site in 1942 (Building Department Records) and was abandoned c 2000. Also according to prior Phase I report, the fill port associated with this abandoned UST was historically located within the asphalt paved land adjacent to the Building C in Parcel 2. GCE's visual inspection did not reveal the presence of any fill port associated with this tank. No additional information is available for GCE's review. Historical potential presence of this UST and its usage may have environmentally impacted the property in general. This is considered to be a *recognized environmental condition*.

REC14- GCE's visual inspection revealed the presence of two (2) catch basins/drywells on the northern exterior portion of Parcel 4. GCE's visual inspection revealed that these drains are covered with closed manhole covers. No additional information is available for GCE's review. Historical usage of Parcel 4 as "Lumber/Wood working", "Rainbow Transit" and "Machine Shops" may have environmentally impacted the property via these catch basins/drywells. This is considered to be a *recognized environmental condition*.

REC15-GCE's visual inspection revealed the presence of suspect floor drains in Building F & G. Historical usage of Parcel 4 as "Lumber/Wood Working", "Rainbow Transit" and "Machine Shops" may have environmentally impacted the property via these floor drains. This is considered to be a *recognized environmental condition*.

REC16-GCE's visual inspection revealed the presence of oil stains on the floors in Building C associated with the historic use of machinery equipment. Poor housing was evident throughout the buildings B, C and D. GCE's visual inspection revealed the presence of leaked silica bags, paint buckets, empty 55-gallon drums, manufacturing supplies etc throughout and surrounding

these buildings. The poor housekeeping practices, with evidence of historic leaks associated with the machinery, and the observed current condition of the Site, is considered to be a *recognized environmental condition*.

REC17- GCE conducted a limited visual screening survey for the presence of Asbestos Containing Material (ACM) at the Site. GCE identified vinyl floor tiles in the areas of the office spaces located in Buildings F and G, piping insulation in Buildings A, B, C, F and G. These materials are suspect of containing ACM. These materials were observed to be undamaged and in good condition at the time of inspection. It should be noted that this survey was limited to visual observations of accessible areas and that the scope of work for this assessment did not include the collection and laboratory analysis of bulk samples of undamaged suspect ACM. Additional suspect ACM may be present in inaccessible areas, including, but not limited to, roofs, pipe chases behind solid walls and ceilings, concealed floor coverings and the interior of water and sewer systems. According to Sanborn maps, aerial photographs and online building records, the current buildings on the Site were identified from at least 1931. With structures that were constructed prior to 1980, the presence of ACM is a possibility and the possible presence of ACM onsite is considered to be a *recognized environmental condition*.

REC18- GCE conducted a limited visual screening survey for the presence of *Lead Based Paint* (LBP) at the Site. GCE observed white paint in good condition located in the office spaces in the on-site buildings. According to sanborn maps, aerial photographs and online building records, the current buildings on the Site were identified from at least 1931. With structures that were constructed prior to 1980, the presence of LBP is a possibility and the possible presence of LBP onsite is considered to be a *recognized environmental condition*.

2.4 FINDINGS OF PREVIOUS ENVIRONMENTAL INVESTIGATION

Below are the findings taken from prior reports:

Phase I Environmental Site Assessment, July 2013, prepared by G. C. Environmental, Inc.

1. Elevation of the property above mean sea level ranges from 22 to 23 feet.

2. Assumed depth to groundwater ranges from 10 to 25 feet below grade at the Site.
3. Assumed groundwater flow is generally towards north northwest beneath the Site.
4. No depth to bedrock information is available.

3.0 PHASE II ENVIRONMENTAL SITE INVESTIGATION

3.1 Investigation Rationale

The objective of the Phase II Site Investigation is to characterize the subsurface soils and groundwater at the Site on Block 906, Lots 1 & 5; Block 907, Lots 1 & 8; Block 908, Lot 12; and Block 909, Lot 35. This is required to determine if any historic or current on or off-site land uses have resulted in any environmental impacts to the proposed development site.

Geophysical Survey

GCE will have a geophysical survey performed for the exterior and accessible interior areas of the property to confirm the locations and estimated sizes of existing USTs and to confirm the absence and/or locations of removed USTs. The geophysical survey will also be used to identify potential subsurface obstructions (utilities, etc.) in the areas where soil borings are planned.

Soil, Soil Vapor and Groundwater

An investigation of soil and soil vapor is being performed to investigate for the existence of potential environmental contamination onsite. Groundwater is assumed to be encountered at a depth of 5- 10 feet below ground surface, so a minimum of eleven (11) groundwater samples will be collected and investigated. The rationale for the soil, groundwater and soil vapor borings are as follows:

- A total of forty two (42) borings will be completed at the site. Based on the Phase I investigations, an estimated six (6) soil borings on Parcel 1; an estimated eleven (11) borings on Parcel 2; an estimated twelve (12) borings on Parcel 3; an estimated eight (8)

borings on Parcel 4; an estimated three (3) borings on Parcel 5; and an estimated two (2) borings on Parcel 6 will be advanced to assess soil/water conditions of the Property.

- Six (6) borings will be completed on Parcel 1 to address historic property usage and poor housekeeping, storage of manufacturing products, leaked silica bags, paint buckets, empty 55-gallon drums, manufacturing supplies etc. at the site. Borings SB-1, SB-2, SB-3, SB-4, SB-5 and SB-6 will address REC 7 through REC 10 as identified in prior Phase I Environmental Site Assessment Report by GCE.
- Eleven (11) borings will be completed on Parcel 2 to address historic property usage, suspect oil stains, historic abandoned UST, suspect oil lines, historic machinery uses and poor housekeeping at the site. Borings SB-7, SB-8, SB-9, SB-10, SB-11, SB-12, SB-13, SB-14, SB-15, SB-16 and SB-17 will address REC 7 through REC 10, REC 13 & REC 16 as identified in prior Phase I Environmental Site Assessment Report by GCE.
- Twelve (12) borings will be completed on Parcel 3 to address historic property usage, suspect historic gas tanks, historic auto repair facility, suspect fill pipes, historic usage of manufacturing equipment etc at the site. Borings SB-18, SB-19, SB-20, SB-21, SB-22, SB-23, SB-24, SB-25, SB-26, SB-27, SB-28 and SB-29 will address REC 2, REC 7 through REC 10, REC 12 & REC 16 as identified in prior Phase I Environmental Site Assessment Report by GCE.
- Eight (8) borings will be completed on Parcel 4 to address historic property usage, suspect fill ports, service area, potential leaks/spills with AST, historic machinery uses, suspect air stacks, floor drains etc at the site. Borings SB-30, SB-31, SB-32, SB-33, SB-34, SB-35, SB-36, SB-37 and SB-38 will address REC 3 through REC 10, REC 14, REC 15 as identified in prior Phase I Environmental Site Assessment Report by GCE.
- Three (3) borings will be completed on Parcel 5 to address historic property usage, suspect UST, historic storage yards etc at the site. Borings SB-38, SB-39 and SB-40 will address REC 1 & REC 11 as identified in prior Phase I Environmental Site Assessment Report by GCE.

- Two (2) borings will be completed on Parcel 6 to address historic property usage, storage yard etc at the site. Borings SB-41 and SB-42 will address REC 11 as identified in prior Phase I Environmental Site Assessment Report by GCE.
- Collection of up to three (3) soil and or sludge samples from the accessible drainage structure locations which have the highest PID readings.
- In addition to the above, based on the results of the geophysical survey, an estimated up to (2) soil borings will be performed to assess soil/water conditions in proximity to identified USTs/AST and in areas where it appears that USTs/AST may have been removed. At each location the soil will be continuously sampled from grade to approximately 25 feet below ground surface (bgs) or ground water, whichever is encountered first, AST boring up to 10 feet bgs, and the retrieved samples will be examined by an environmental scientist and screened with a calibrated photoionization detector (PID) for indications of potential contamination. Boring logs will be prepared to document the observations and, if visible indications of potential contamination are noted, then at least one sample shall be collected from the affected soil for laboratory analysis.
- Eleven (11) soil boring locations will be converted into groundwater borings and eleven (11) groundwater samples (GW-1/GW-2/GW-3/GW-4/GW-5/GW-6/GW-7/GW-8/GW-9/GW-10/GW-11) will be collected as follows: GW-1 sample will be collected from the central exterior portion of Building D on Parcel 1, in the vacant storage area; GW-2 sample will be collected from the northwestern exterior portion of Building D on Parcel 1; GW-3 sample will be collected from the northeastern exterior portion of Building C on Parcel 2, in the area of suspect abandoned UST location; GW-4 sample will be collected from the northern interior portion of Building C on Parcel 2; GW-5 sample will be collected from the interior portion of Building E on Parcel 3; GW-6 sample will be collected from the exterior portion of Building E on Parcel 3, in the area of suspect gas tanks; GW-7 sample will be collected from the interior portion of Building B on Parcel 3; GW-8 sample will be collected from the interior portion of Building F on Parcel 4, in the

area of suspect fill pipe; GW-9 and GW-10 sample will be collected from the exterior portion of Building G on Parcel 4, in the area of floor/storm drain system; GW-11 sample will be collected in the vacant storage area/lot of Parcel 5.

- Soil Vapor (SV), Sub-slab Vapor (SSV) and Indoor Air (IA) samples will be collected from Parcels 1, 2, 4, 5 & 6 as follows: SV-1/SSV-1/IA-1 from Parcel 1; SV-2/SSV-2/IA-2 from Parcel 2; SV-4/SSV-4/IA-4 from Parcel 4; SV-5 from Parcel 5; and SV-6 from Parcel 6. SSV-3/SSV-3A/SV-3/SV-3A/IA-3 samples will be installed/collected in evenly spaced locations in Building E of the historical auto repair shop in Parcel 3 to detect potential sub slab vapor impacts.

Asbestos Containing Material (ACM)

GCE conducted a limited visual screening survey for the presence of Asbestos Containing Material (ACM) at the Site. GCE identified vinyl floor tiles in the areas of the office spaces located in Buildings F and G, piping insulation in Buildings A, B, C, F and G. These materials are suspect of containing ACM. These materials were observed to be undamaged and in good condition at the time of inspection.

An Asbestos Containing Material (ACM) survey is to be performed to investigate for the presence of ACM at the Property. The scope of the ACM is as follows:

- An asbestos site inspection/survey to be performed by New York City Department of Environmental Protection (NYCDEP) licensed inspector.
- Collect asbestos samples as necessary by the asbestos inspector.
- Generate an Asbestos Certification Report including sample results.

Lead Based Paint (LBP)

GCE conducted a limited visual screening survey for the presence of *Lead Based Paint* (LBP) at the Site. GCE observed white paint in good condition located in the office spaces in the on-site buildings.

A Lead Based Paint (LBP) survey is to be performed to investigate for the presence of LBP at the Property. The scope of the LBP is as follows:

- A surface-by-surface LBP inspection to be performed by Environmental Protection Agency (EPA) certified inspector.
- Collect LBP samples as necessary by the LBP inspector.
- Generate an LBP Certification Report including sample results.

3.2 Investigation Procedures

Prior to invasive work, a one-call utility mark-out will be completed in accordance with local laws to locate buried electric, natural gas, telecommunication utilities, etc.

Geophysical Survey

GCE will have a geophysical survey performed for the exterior and accessible interior areas of the property to confirm the locations and estimated sizes of existing USTs and to confirm the absence and/or locations of removed USTs. The geophysical survey will also be used to identify potential subsurface obstructions (utilities, etc.) in the areas where soil borings are planned.

Soil Sampling

A qualified environmental driller will advance forty two (42) investigative borings. GCE's field geologist will supervise the site work under the supervision of a QEP. Soil samples from the borings will be placed into glass containers equipped with a teflon lined closure for soils. The quantity of soil will be split as follows: the head space of the 8-oz glass container was allowed to develop and was subsequently field screened for the presence of total VOCs using MultiRAE systems portable photoionization detector (PID) with a 10.6 e.V. lamp, calibrated for isobutylene standards. The geologist engineer will screen the soil samples for environmental impacts and collect environmental samples for laboratory analysis. Site work will comply with safety guidelines outlined in the HASP (Appendix C).

The investigative borings will be advanced to the depth of at least fourteen (14) feet below grade or to groundwater (whichever is encountered first) using a direct push drilling method.

The proposed boring location plan is attached as Figure 2. Soil will be collected continuously to the boring termination depth with a Geoprobe macrocore sampler in two-foot increments using acetate sleeves. Each sample will be screened for organic vapors with a photo-ionization detector (PID) and evaluated for visual and olfactory indications of environmental impacts. Soil descriptions will be recorded in a field log.

At least two (2) soil samples will be collected from each borehole, one sample to be collected at the 0-2 foot interval below grade and the deeper sample to be collected at the depth of the excavation and or groundwater interface (see table 1). In the event that evidence of contamination is observed in the boring, an additional sample will be taken from that location. If the boring reaches bedrock at a shallower depth than the proposed excavation depth, the deeper soil sample will be taken from 2 feet above the bedrock. A total of at least ninety-five (95) samples will be analyzed which are as follows; three (3) discrete soil/sludge samples from the three drainage structures, one (1) soil from the AST location, eighty four samples (84) samples - from 0-2 feet and groundwater interface/excavation depth from forty two (42) borings across all the parcels, at least seven (7) samples randomly collected in the areas of suspected USTs/ASTs and from historical areas of concern etc. If elevated PID readings or visual impact is discovered additional samples will be required. The samples collected will be analyzed by a NYSDOH Environmental Laboratory Approval Program (ELAP) certified laboratory for the presence of VOC's using EPA Method 8260, B/N's using EPA Method 8270, Pesticides using EPA Method 8081, PCBs using EPA Method 8082 and TAL Metals using 6010/7000.

Samples will not be composite samples but will be discrete grab samples.

Table 1: Soil Borings/Depths/Type

GW-1 thru GW-11	Assumed 15-25	Groundwater
Soil Vapor SV-1-SV-6	5-6' below ground surface	Discrete
Sub Slab SSV-1-SSV 4	1" below slab	Discrete
Indoor Air IA-1-IA-4	Indoor	Discrete

A public utility mark-out will be obtained on the subject property prior to drilling activities.

If in any case drill refusal occurs by the Geoprobe, or if mechanical boring is not possible due to the proximity to utilities, a hand auger (consisting of a three (3) inch diameter bucket, a five (5) foot long extension rod and “T” handle) will be used for shallow depths (0-5 feet).

Groundwater Sampling

Groundwater elevation is expected between 15- 25 feet bgs. The groundwater samples will be collected using a Geoprobe Sampler. The assembled screen point groundwater sampler will be driven (with drive cap) to the subsurface using standard Geoprobe rods. Extension rods are used until the sampler tip has reached approximately one foot below the target sampling depth. After reaching the groundwater depth, the rods are pulled back at a distance of about 2 feet. At this point, the groundwater depth/level is measured by lowering the sensor of a Solinst electronic interface meter. After recording the water level depth, the indicator sensor is removed from the geoprobe rods. (Please see Figure 2 for well locations). Tubing with a check valve or smaller diameter bailer is then inserted into the probe rods to collect the water sample. Sampling will be conducted in accordance with NYSDEC Draft DER-10 Technical Guidance for Site Investigation and Remediation, dated December 2002, and Sampling Guidelines and Protocols, dated March 1991. Following sample collection, boreholes will be backfilled with soil cuttings. Any suspect contaminated soil cuttings will be placed in sealed and labeled DOT approved 55-gallon drums pending off-site disposal at a permitted facility.

Eleven (11) soil boring locations will be converted into groundwater borings and eleven (11) groundwater samples (GW-1/GW-2/GW-3/GW-4/GW-5/GW-6/GW-7/GW-8/GW-9/GW-10/GW-11) will be collected and analyzed by a NYSDOH- ELAP certified laboratory for the presence of VOC's using EPA Method 8260, B/N's using EPA Method 8270, Pesticides using EPA Method 8081, PCBs using EPA Method 8082 and TAL Metals (filtered and unfiltered) using 6010/7000.

Three-to-five well bore volumes will be purged from the each groundwater boring before the groundwater sample is collected. Each of the groundwater samples will be appropriately

containerized when collected and immediately maintained in an ice-packed cooler. After each day's sampling is done, the samples will be transported under strict chain-of-custody to an NYSDOH-ELAP certified laboratory.

All drilling equipment utilized in boring advancement will be steam cleaned prior to initial use. All metal parts of the Geoprobe sampler shall be cleaned using mechanical and chemical cleaning procedures which consisted of brushing and sweeping off loose dirt followed by detergent washing and potable water rinsing.

Soil Vapor Sampling

A total of sixteen (16) of soil vapor/sub slab/ indoor air (screening) samples will be collected from the proposed soil vapor locations on the Sampling Location Map (Figure 2). All samples will be collected in accordance with the Final Guidance for Evaluating Soil Vapor Intrusion in the State of New York (NYSDOH October 2006). Conditions in the field may require adjustment to the sampling locations.

Samples will be collected in Summa canisters which have been certified clean by the laboratory and analyzed by using USEPA Method TO-15. Flow rate of both purging and sampling will not exceed 0.2 L/min. Sampling will occur for the duration of two (2) hours. A sample log sheet will be maintained summarizing sample identification, date and time of sample collection, sampling depth, identity of samplers, sampling methods and devices, soil vapor purge volumes, volume of the soil vapor extracted, vacuum of canisters before and after the samples are collected, apparent moisture content of the sampling zone, and chain of custody protocols.

For sub-slab samples, as part of the vapor intrusion evaluation, a tracer gas will be used in accordance with NYSDOH protocols to serve as a quality assurance/quality control (QA/QC) device to verify the integrity of the soil vapor probe seal. Helium will be used as the tracer gas and a box will serve to keep it in contact with the probe during testing. A portable monitoring device will be used to analyze a sample of soil vapor for the tracer prior to sampling. If the tracer sample results show a significant presence of the tracer, the probe seals will be adjusted to prevent infiltration. At the conclusion of the sampling round, tracer monitoring will be performed a second time to confirm the integrity of the probe seals.

Investigation Derived Waste

All investigation-derived waste (e.g., drill cuttings, decontamination water, etc.) will be containerized in a NYSDOT-approved 55-gallon drum temporarily staged on-site for future sampling and off-site disposal. All disposable personal protective equipment used during the site investigation will be appropriately containerized prior to off-site disposal.

3.3 Sample Analysis

Soil and Groundwater samples will be submitted to a New York State Department of Health (NYSDOH) Environmental Laboratory Accreditation Program (ELAP)-certified laboratory for Full analysis:

- Volatile Organic Compounds by EPA Method 8260;
- Semi-volatile organic compounds by EPA Method 8270;
- Pesticides by EPA Method 8081;
- PCBs by EPA Method 8082;
- Target Analyte List Metals by EPA Method 6010-Soil; and
- Target Analyte List Metals (filtered & unfiltered) by EPA Method 6010-GW

If either LNAPL and/or DNAPL are detected, appropriate samples will be collected for characterization and “finger print analysis” and required regulatory reporting (i.e. spills hotline) will be performed.

- Soil vapor samples will be analyzed for VOCs by using USEPA Method TO-15.

Number of Samples

- A total of at least ninety-five (95) soil samples will be analyzed which are as follows; three (3) discrete soil/sludge samples from the three drainage structures, one (1) soil from the AST location, eighty four samples (84) samples - from 0-2 feet and groundwater interface/excavation depth from forty two (42) borings across all the parcels, at least seven (7) samples randomly collected in the areas of

suspected USTs/ASTs and from historical areas of concern etc. If elevated PID readings or visual impact is discovered additional samples will be required.

- Eleven (11) groundwater samples (GW-1/GW-2/GW-3/GW-4/GW-5/GW-6/GW-7/GW-8/GW-9/GW-10/GW-11) will be collected and analyzed.
- A total of sixteen (16) of soil vapor/sub slab/ indoor air (screening) samples will be collected from the proposed soil vapor locations.
- Four (4) duplicate samples (two soil and two groundwater samples) will be collected to evaluate field sampling precision or reproducibility of measurements of the same parameter under the given set of conditions
- Analysis of two (2) trip blanks (VOCs only) for groundwater sampling

3.4 Reporting

A Phase II ESI Report will be prepared following completion of the field activities and receipt of the laboratory data. The Report will be prepared using the OER template for the Phase II ESI Report and will provide detailed summaries of the investigative findings and soil, soil vapor and groundwater analytical results compared to the NYSDEC Part 375-6.8(a) Unrestricted Used Soil Cleanup Objectives, appropriate Part 375-6.8(b) Restricted Soil Cleanup Objectives, NYSDEC CP-51 Soil Cleanup Guidance, NYSDOH Soil Vapor Intrusion Guidance and NYSDEC Part 703 Groundwater Quality Standards (GQS) (class GA) or Division of Water Technical and Operational Guidance Series (TOGS) 1.1.1 Ambient Water Quality Standards (AWQS). The Report will include an updated Site Plan and remedial recommendations, as warranted.

4.0 QUALITY ASSURANCE/QUALITY CONTROL

4.1 Quality Assurance/Quality Control Procedures

QA/QC procedures will be used to provide performance information with regard to accuracy, precision, sensitivity, representation, completeness, and comparability associated with the sampling and analysis for this investigation. Field QA/QC procedures will be used (1) to

document that samples are representative of actual conditions at the Site and (2) identify possible cross-contamination from field activities or sample transit. Laboratory QA/QC procedures and analyses will be used to demonstrate whether analytical results have been biased either by interfering compounds in the sample matrix, or by laboratory techniques that may have introduced systematic or random errors to the analytical process. A summary of the field and laboratory QA/QC procedures is provided below.

4.2 Field QA/QC

Field QA/QC will include the following procedures:

- Calibration of field equipment, including PID, on a daily basis;
- Analysis of trip blank (VOCs only) and duplicate samples;
- Use of dedicated and/or disposable field sampling equipment;
- Proper sample handling and preservation;
- Proper sample chain of custody documentation; and
- Completion of report logs.

The above procedures will be executed as follows:

- Four duplicate samples (two soil and two groundwater samples) will be collected to evaluate field sampling precision or reproducibility of measurements of the same parameter under the given set of conditions;
- Disposable sampling equipment, including acetate sleeves, latex gloves, and disposable bailers (or sample tubing), will be used to minimize cross-contamination between samples;
- For each of the parameters analyzed, a sufficient sample volume will be collected to adhere to the specific analytical protocol, and provide sufficient sample for reanalysis if necessary;
- Because plasticizers and other organic compounds inherent in plastic containers may contaminate samples requiring organic analysis, samples will be collected in glass containers, with the exception of the nitrate-preserved groundwater sample for metals

analysis;

- Appropriate sample preservation techniques, including cold temperature storage at 4° C, will be utilized to ensure that the analytical parameters concentrations do not change between the time of sample collection and analysis; and
- Samples will be analyzed prior to the expiration of the respective holding time for each analytical parameter to ensure the integrity of the analytical results.

4.3 Sample Custody

Sample handling in the field will conform to appropriate sample custody procedures. Field custody procedures include proper sample identification, chain-of-custody forms, and packaging and shipping procedures. Sample labels will be attached to all sampling bottles before field activities begin to ensure proper sample identification. Each label will identify the site and sample location. Styrofoam or bubble wrap will be used to absorb shock and prevent breakage of sample containers. Ice or ice packs will be placed in between the plastic bags for sample preservation purposes.

After each sample is collected and appropriately identified, the following information will be entered into the chain-of-custody form:

- Site name and address;
- Sampler(s)' name(s) and signature(s);
- Names and signatures of persons involved in the chain of possession of samples;
- Sample number;
- Number of containers;
- Sample location;
- Date and time of collection;
- Type of sample, sample matrix and analyses requested;
- Preservation used (if any); and
- Any pertinent field data collected (pH, temperature, conductivity, Dissolved Oxygen

[DO]).

The sampler will sign and date the “Relinquished” blank space prior to removing one copy of the custody form and sealing the remaining copies of the form in a Ziploc plastic bag taped to the underside of the sample cooler lid. The sample cooler will be sealed with tape prior to delivery or shipment to the laboratory.

4.4 Report Logs

Field logs and borings logs will be completed during the course of this investigation. A field log will be completed on a daily basis which will describe all field activities including:

- Project number, name, manager, and address;
- The date and time;
- The weather conditions;
- On-site personnel and associated affiliations;
- Description of field activities; and
- Pertinent sample collection information including sample identification numbers, description of samples, location of sampling points, number of samples taken, method of sample collection and any factors that may affect its quality, time of sample collection, name of collector, and field screening results.

A boring log will be completed for each boring and will include the following information:

- Project number, name, manager, and location;
- The date and time;
- Drilling company and method used;
- Boring number;
- Total boring depth and water table depths; and
- Pertinent soil sample information including sample number, interval, depth, amount recovered, color, composition, percent moisture, visual and olfactory observations of contamination, and PID readings.

4.5 Laboratory QA/QC

An ELAP-certified laboratory will be used for all sample analyses. The laboratory will follow the following QA/QC protocols. All samples will be delivered to the laboratory within 24 hours of sample collection. Samples will be received by laboratory personnel, who will inspect the sample cooler(s) to check the integrity of the custody seals. The cooler(s) will then be opened, the samples unpackaged, and the information on the chain-of-custody form examined. If the shipped samples match those described on the chain-of-custody form, the laboratory sample custodian will sign and date the form on the next “Received” blank and assume responsibility for the samples. If problems are noted with the sample shipment, the laboratory custodian will sign the form and record problems in the “Remarks” box. The custodian will then immediately notify the Project Manager so appropriate follow-up steps can be implemented on a timely basis.

A record of the information detailing the handling of a particular sample through each stage of analysis will be maintained by the laboratory. The record will include:

- Job reference, sample matrix, sample number, and date sampled;
- Date and time received by laboratory, holding conditions, and analytical parameters;
- Extraction date, time and extractor’s initials (if applicable), analysis date, time, and analyst’s initials; and
- QA batch number, date reviewed, and reviewer’s initials.

5.0 HEALTH AND SAFETY PLAN (HASP)

5.1 Health and Safety Plan (HASP)

The investigation Health and Safety Plan (HASP) is included in Appendix C. The Site Supervisor will be Mr. Ravi Kumar Kolaventi. Investigative work performed under this Work Plan will be in full compliance with applicable health and safety laws and regulations, including Site and OSHA worker safety requirements and HAZWOPER requirements. Confined space entry, if any, will comply with OSHA requirements and industry standards and will address

potential risks. The parties performing the investigation work will ensure that performance of work is in compliance with the HASP and applicable laws and regulations.

All field personnel involved in investigation activities will participate in training required under 29 CFR 1910.120, including 40-hour hazardous waste operator training and annual 8-hour refresher training. Site Safety Officer will be responsible for maintaining workers training records.

Personnel entering any exclusion zone will be trained in the provisions of the HASP and be required to sign a HASP acknowledgment. Site-specific training will be provided to field personnel. Additional safety training may be added depending on the tasks performed. Emergency telephone numbers will be posted at the site location before any work begins. A safety meeting will be conducted before each shift begins. Topics to be discussed include task hazards and protective measures (physical, chemical, environmental); emergency procedures; PPE levels and other relevant safety topics. Meetings will be documented in a log book or specific form. Potential on-site chemicals of concern include VOCs, SVOCs, PCBs, and Heavy Metals (specifically arsenic, lead, and mercury at a minimum). Information fact sheets for each contaminant group and/or MSDS' are included in the HASP.

An emergency contact sheet with names and phone numbers for all pertinent project personnel as well as regulatory hotline information is included in the HASP. That document will define the specific project contacts for use in case of emergency.

GCE Project No. 13-098-00

Dear Mr. Moshopoulos:

Enclosed please find the Phase I Environmental Site Assessment (the Report) prepared by G. C. Environmental, Inc. (GCE) for the subject Site. This Report was completed according to the terms and conditions authorized by you, and in general conformance with the ASTM Standard E 1527-05 and GCE scope of work.

The purpose of this Report was to identify recognized environmental conditions, by observation or documentation that could have an adverse environmental impact on the Site.

If you have any questions concerning this project, please do not hesitate to contact the undersigned.

Very truly yours,

A handwritten signature in black ink, appearing to read 'G. Collins', is written over a light blue horizontal line.

* Please refer to the Phase I ESA report for complete details of the identified REC(s).

EXECUTIVE SUMMARY

This *Phase I Environmental Site Assessment* (the Report) has been prepared in reference to the Site located at 4-05, 4-34, 4-55, 4-57, 8-01 and 8-51 26th Avenue, Astoria, Queens, New York 11102, in accordance with the scope and limitations of *ASTM Standard E 1527-05, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. This Report was prepared with no exceptions or deletions from ASTM Standard E 1527-05. Please refer to Figure 2 – Property Plan in Appendix B.

Hereinafter, the term "Site" shall refer to six (6) parcels, namely 8-51 26th Avenue (Block 906, Lot 1), 8-01 26th Avenue (Block 906, Lot 5), 4-55 26th Avenue (Block 907, Lot 1), 4-05 26th Avenue (Block 907, Lot 8), 4-57 26th Avenue (Block 908, Lot 12) and 4-34 26th Avenue (Block 909, Lot 35) as described in the report. The term "Parcel 1" shall refer to 8-51 26th Avenue as described in the report; the term "Parcel 2" shall refer to 8-01 26th Avenue as described in the report; the term "Parcel 3" shall refer to 4-55 26th Avenue as described in the report; the term "Parcel 4" shall refer to 4-05 26th Avenue as described in the report; the term "Parcel 5" shall refer to 4-57 26th Avenue as described in the report; and the term "Parcel 6" shall refer to 4-34 26th Avenue as described in the report.

During the site inspection, all areas of the Site were inspected, except for the roofs of all existing seven (7) office/manufacturing buildings, interior of Building E, and some of the tenant spaces in Buildings F & G, access to which were not provided.

The Site location consists of an approximately 8.16 acres (355,702 sq. ft) irregular-shaped parcel of land and is comprised of six (6) parcels, developed with seven (7) buildings, which are as follows: a one-story warehouse with a mezzanine (Building A) in Parcel 3; a one-story office/manufacturing building with a mezzanine and a partial basement (Building B) in Parcel 3; a one-story warehouse with a partial basement (Building C) in Parcel 2; a one-story warehouse (Building D) in Parcel 1; a one-story office building (Building E) in Parcel 3; a one-story manufacturing building (Building F) in Parcel 4; and a two-story manufacturing building (Building G) in Parcel 4. The onsite facilities were constructed between as early as 1897 and as late as 1943.

- Parcel 1 consists of approximately 27,565 sq. ft, located on the southeastern portion of the Site
- Parcel 2 consists of approximately 42,051 sq. ft, located on the southeastern portion of the Site, west side of Parcel 1
- Parcel 3 consists of approximately 101,500 sq. ft, located on the central portion of the Site, west side of Parcel 2
- Parcel 4 consists of approximately 119,349 sq. ft, located on the northwestern/central portion of the Site, west side of Parcel 3
- Parcel 5 consists of approximately 36,580 sq. ft, located on the southeastern portion of the Site, south of Parcel 1
- Parcel 6 consists of approximately 28,657 sq. ft, located on the southern portion of the Site, south side of Parcels 2 and 3.

Parcel 1 is developed with a one-story manufacturing building (Building D) with basement level located on the southeastern portion of the Site. The building is currently occupied by Energex Wall Systems, which manufactures stucco wall systems. The remainder of the property is occupied by asphalt paved parking and outdoor storage

Parcel 2 is developed with a one -story manufacturing/warehouse building (Building C) with a partial basement level located on the southeastern portion of the Site. The building is currently used by Enege x Wall Systems for storage of stucco products. The remainder of the property is occupied by an asphalt paved parking lot.

Parcel 3 is developed with three (3) one-story office/warehouse/ manufacturing buildings (Buildings A, B and E) with mezzanine and a partial basement level located on the central portion of the Site. Building A is currently occupied for Rigging, Machine Shop, Scaffolding; Building B is currently occupied by Energex Wall Systems for storage of stucco products and GCE did not get access into Building E. The remainder of the property is occupied by an asphalt paved parking lot.

Parcel 4 is developed with two (2) buildings, namely Building F, a one-story manufacturing building with mezzanine and a partial basement level, and Building G, a two (2)-story manufacturing building, located on the northwestern/central portion of the Site. The buildings are currently occupied by manufacturing and commercial tenants. The remainder of the property is occupied by an asphalt paved parking lot.

Parcel 5 and 6 are vacant lots utilized for storage of trailers, trucks etc.

Based on GCE's review of available information, the Site was occupied by various manufacturing tenants since at least 1897. The Parcels 1, 2, 3, 5 and 6 were occupied by Super Stud Building Products Inc since at least 1973. Parcel 4 was occupied by various Lumber, Wood Manufacturing and several commercial tenants since at least 1897.

The surrounding area is utilized for commercial, residential and transportation purposes. Several of the nearby properties are listed in the regulatory databases reviewed. Based on their status, description and/or location, none of the nearby sites listed may have environmentally impacted the Site. The Site location is bounded approximately by the East River (North), 9th Street (East), 26th Avenue (South) and Commercial/Residential Area (West).

According to the Environmental Data Resources, Inc. (EDR) report, the Site is named in the Underground Storage Tank (UST), Historical Underground Storage Tank (HIST UST), RCRA (Resource Conservation Recovery Act) Non Gen, FINDS (Facility Index System) and NY SPILLS site listings.

The Site is listed in EDR report as shown below:

Superior Steel Studs Inc

UST, HIST UST

4-57 26th Avenue, Astoria, NY – Parcel 5

The Target property is listed in the “Underground Storage Tank (UST)” and “Historical Underground Storage Tank (HIST UST)” databases. Also, according to New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage (PBS) database (PBS No.2-305383) and EDR report, there is one (1) ‘closed-in-place’ 4,000- gallon UST listed for this site, which was closed in 1996. The site is not listed in leaking storage tanks incident reports and/or NY Spills incident database (SPILLS) with respect to this tank. The property status listing in the UST & HIST UST database is considered to be a *recognized environmental condition*. Additional investigation is necessary to know the subsurface conditions at the 4-57 address - Parcel 5.

Pleks Products/Pleko East Inc.

NYS Spills, RCRA NonGen, FINDS

4-57 26th Avenue (corner property, also referred to as 25-50 9th Street) - Parcel 5

The Target property is listed as a NY SPILLS site. According to NYSDEC Spills database (Spill No.9710268) and EDR report, the SPILLS case was opened on December 03, 1997, when an unknown quantity of an amount of material was spilled onto surface water due to an unknown cause. This SPILLS case was closed on December 5, 1997. The site is also listed in the RCRA Non Generator and FINDS database. No violations were recorded for the site. Based on their status and description, these SPILLS, RCRA Non Gen and FINDS listings issued for the site are not likely to environmentally impact the Site.

Super Stud Building

NYS Spills

8-01 26th Avenue – Parcel 2

The Target property is listed as a NY SPILLS site. According to NYSDEC Spills database (Spill No.9602429) and EDR report, the SPILLS case was opened on May 20, 1996, when an unknown quantity of an amount of limestone was spilled onto surface water due to an unknown cause. This SPILLS case was closed on May 21, 1996. Based on their status and description, this SPILLS listing issued for the site is not likely to environmentally impact the Site.

Of the eleven (11) additional EDR-listed sites of concern, within ¼ mile of the Site and located hydrologically up-gradient of the Site, an investigation of site status reveals that the characteristics listed in the EDR report are not likely to environmentally impact the Site. The remaining EDR-listed sites, located on the subject Site, on adjacent properties, or located hydrologically up-gradient of the Site, are not likely to environmentally impact the Site, based on status and location.

According to available online information from the New York City Building Department, no Certificates of Occupancies were available for Buildings A to G. According to available information from the online New York City Map, Buildings A, B and E were constructed in c 1931, Building C was constructed in c 1943, Building D was constructed in c 1935 and Buildings F and G were constructed in c 1931. According to available information from Mr. Christopher

Giovanis, representative of the property owner, the existing buildings have been used for industrial and commercial uses since the 1970s.

This assessment has identified evidence of *recognized environmental conditions (REC)* in connection with the Site as noted below, *Conditions outside the scope of ASTM Practice E 1527-05* were identified in connection with the Site, and are also noted below.

- According to UST & HIST UST database and NYSDEC PBS database, one (1) 4,000 gallon fuel oil UST was administratively closed at the property in 1996. The Parcel 5 property status listed under UST and HIST UST database is considered to be a *recognized environmental condition*.
- According to the Sanborn Maps provided by EDR on July 16, 2013, there is one (1) gasoline tank listed as “GT” present inside the central portion of the existing Building E of Parcel 3. Furthermore, GCE’s review of the 1948, 1950, 1967, 1977, 1979 and 1981 Sanborn Fire Insurance maps indicate the presence of one (1) gasoline tank listed as “GT” of unknown size located in a close proximity to the east of Building E. The historical potential presence of the gasoline tanks and their usage may have environmentally impacted Parcel 3 in general and is considered as a *recognized environmental condition*.
- GCE’s visual inspection revealed the presence of one (1) suspect fill port on the western interior portion of Building F in Parcel 4. The potential historical presence of USTs and their usage may have environmentally impacted Parcel 4. This is considered as a *recognized environmental condition*.
- GCE’s visual inspection revealed the presence of one (1) Above Ground Storage Tank of approximately 250-gallon, inside the tenant space of “Rainbow Transit” located on the northern portion of Building F in Parcel 4. GCE’s visual inspection also revealed the presence of a machine/service shop for service of buses inside the building. Historical usage of service area associated with the “Rainbow Transit” along with the AST may have environmentally impacted Parcel 4 in general and are thus considered to be a *recognized environmental condition*.
- According to historical Sanborn Maps provided by EDR in their report of July 16, 2013, Parcel 4 (Buildings F & G) was identified historically as “Planing Mill/Wood Working” and “Lumber/Carpenter Sheds”. Historical property usages as “Wood Working” and “Lumber Storage/Planing Mill” may have environmentally impacted the Parcel 4 in general and are thus considered to be a *recognized environmental condition*.
- According to historical Sanborn Maps provided by EDR in their report of July 16, 2013, Parcels 1, 2 and 3 (Buildings A, B, C, D & E) were identified as “L Morton-Steam Stone” and “Cutting and Planing”, “Tisdale Lumber & Coal Yard”, “Geo. Brown & Co. Stream Stone Works, “Weisberg Baer Co-Sash Door Factory” “Marcheth Marble Co, Inc- Machine Shop, “Superior Steel Studs” etc. Historical property usages as “Superior Steel Studs”, “Machine Shop”, “Auto Repair” and “Coal Yard/Door Factory” may have environmentally impacted Parcel 4 in general and are thus considered to be a *recognized environmental condition*.

- PCBs may have environmentally impacted the Site through historical usage of cutting oils/manufacturing equipment/coolants/lubricants and is therefore considered to be a *recognized environmental condition*.
- According to historical Sanborn Maps provided by EDR in their report of July 16, 2013, Parcel 5 is used for storage of “Superior Studs Inc” and “Energex Wall Systems” manufacturing supplies. Parcel 6 is occupied for storage purposes. The 1948 sanborn map indicates that the adjacent property, to the eastern side of the Parcel 6 property is occupied by “Metal Container Mfg”. GCE’s visual inspection revealed the presence of storage of manufacturing supplies on Parcel 5. Historical property usages as storage of manufacturing supplies may have environmentally impacted Parcels 5 and 6 in general and are thus considered to be a *recognized environmental condition*.
- According to the prior Phase I report prepared by GCE and dated 2006, there is one (1) 5,000 gallon heating oil UST, installed at the Site in 1942 (Building Department Records) and abandoned c 2000. Historical potential presence of this UST and its usage may have environmentally impacted the property in general and is thus considered to be a *recognized environmental condition*.
- GCE’s visual inspection revealed the presence of two (2) catch basins/drywells on the northern exterior portion of Parcel 4. Historical usage of Parcel 4 as “Lumber/Wood working”, “Rainbow Transit” and “Machine Shops” may have environmentally impacted the property via these catch basins/drywells. This is considered to be a *recognized environmental condition*.
- GCE’s visual inspection revealed the presence of suspect floor drains in Building F & G. Historical usage of Parcel 4 as “Lumber/Wood working”, “Rainbow Transit” and “Machine Shops” may have environmentally impacted the property via these floor drains. This is considered to be a *recognized environmental condition*.
- GCE’s visual inspection revealed the presence of oil stains on the floors in Building C associated with the historic use of machinery equipment. Poor housekeeping was evident throughout the buildings B, C and D. GCE’s visual inspection revealed the presence of leaked silica bags, paint buckets, empty 55-gallon drums, manufacturing supplies etc throughout and surrounding these buildings. The poor housekeeping practices with evidence of historic leaks associated with the machinery and the observed current condition of the Site is considered to be a *recognized environmental condition*.
- GCE conducted a limited visual screening survey for the presence of Asbestos Containing Material (ACM) at the Site. GCE identified vinyl floor tiles in the areas of the office spaces located in Buildings F and G, piping insulation in Buildings A, B, C, F and G and such material is suspect of containing ACM. With structures that were constructed prior to 1980, the presence of ACM is a possibility and the possible presence of ACM onsite is considered to be a *recognized environmental condition*.

- GCE conducted a limited visual screening survey for the presence of *Lead Based Paint* (LBP) at the Site. GCE observed white paint in good condition located in the office spaces in the on-site buildings. According to Sanborn maps, aerial photographs and online building records, the current buildings on the Site were identified from at least 1931. With structures that were constructed prior to 1980, the presence of LBP is a possibility and the possible presence of LBP onsite is considered to be a *recognized environmental condition*.

GCE recommends the following based on the above *recognized environmental condition (REC)* findings for the Site:

A limited Phase II Environmental Site Assessment should be performed at the Site as follows:

- A geophysical survey should be performed throughout the Site which includes the areas of suspected and historical UST locations to identify the presence of any USTs at the Site.
- Subsurface investigations should be performed throughout the Site, which includes potential historic/present UST areas, storm drain areas, suspect floor drain areas, all Buildings, vacant lot areas, parking areas and in general areas where historical Site usage as manufacturing metal/machine shops, lumber/wood working/assembling, auto repair shop, etc may have environmentally impacted the Site.
- Soil Vapor testing should be performed at Building E, proximate to former auto repair facilities, to test for presence of chlorinated hydrocarbon solvents in subsurface soils, related to auto repair and auto body work.
- ACM and LBP are conditions outside the scope of ASTM E 1527-05 and a survey should be conducted at the Site to investigate these conditions.

Although it is not a recognized environmental condition, it should be noted that, according to the Flood Insurance Rate Map for the City of New York, New York Bronx, Richmond, New York, Queens and Kings Counties, Community Panel No. 360497 0032B, effective date November 16, 1983, the northern portion of the Site is located within an area between the limits of the 100-year floor and 500-year flood; or certain areas subject to 100-year flooding with average depths less than one (1) foot or where the contributing drainage area is less than one (1) square mile; or areas protected by levees from the base flood (Zone B). The southern portion of the Site is also located within an area of minimal flooding outside the 500-year flood zone (Zone C).

The results of GCE's review of any outstanding information may or may not result in changes in the Findings, Conclusions or Opinions of this report.

Since soil or groundwater testing was not performed as part of this assessment, GCE makes no direct representation of soil or groundwater quality conditions.

1.0 INTRODUCTION

This Report documents the findings, opinions, and conclusions of a Phase I Environmental Site Assessment (ESA) of the property located at 8-51 26th Avenue, 8-01 26th Avenue, 4-55 26th Avenue, 4-05 26th Avenue, 4-57 26th Avenue and 4-34 26th Avenue, Astoria, Queens, New York.

Hereinafter, the term "Site" shall refer to six (6) parcels, namely 8-51 26th Avenue (Block 906, Lot 1), 8-01 26th Avenue (Block 906, Lot 5), 4-55 26th Avenue (Block 907, Lot 1), 4-05 26th Avenue (Block 907, Lot 8), 4-57 26th Avenue (Block 908, Lot 12) and 4-34 26th Avenue (Block 909, Lot 35) as described in the report. The term "Parcel 1" shall refer to 8-51 26th Avenue as described in the report; the term "Parcel 2" shall refer to 8-01 26th Avenue as described in the report; the term "Parcel 3" shall refer to 4-55 26th Avenue as described in the report; the term "Parcel 4" shall refer to 4-05 26th Avenue as described in the report; the term "Parcel 5" shall refer to 4-57 26th Avenue as described in the report; and the term "Parcel 6" shall refer to 4-34 26th Avenue as described in the report.

1.1 PURPOSE

The purpose of this ESA was to identify *recognized environmental conditions* and certain environmental conditions outside the scope of ASTM Practice E 1527-05 in connection with the property at the time of the property reconnaissance.

1.2 SCOPE-OF-SERVICES

This ESA was conducted utilizing a standard of good commercial and customary practice that was consistent with the ASTM Standard Practice E 1527-05. Any significant scope-of-work additions, deletions or deviations to ASTM Practice E 1527-05 are noted below or in the corresponding sections of this Report. The scope-of-work for this assessment included an evaluation of the following:

- Physical characteristics of the Site through a review of referenced sources for topographic, geologic, soils and hydrologic data.
- Site history through a review of referenced sources such as land deeds, fire insurance maps, city directories, aerial photographs, prior reports, and interviews.
- Current Site conditions, including observations and interviews regarding the following: the presence or absence of hazardous substances or petroleum products; generation, treatment, storage, or disposal of hazardous, regulated, or biomedical waste; equipment that utilizes oils which potentially contain PCBs; and storage tanks (aboveground and underground).
- Usage of surrounding area properties and the likelihood for releases of hazardous substances and petroleum products (if known and/or suspected) to migrate onto the Site.
- Information in referenced environmental agency databases and local environmental records, within specified minimum search distances.

- Past ownership through a review of available prior reports and local municipal file review. The scope-of-work also included consideration of the following potential environmental conditions that are outside the scope of ASTM Practice E 1527-05: asbestos-containing materials (ACM), lead-containing paint (LBP), wetlands and radon.

1.3 ASSUMPTIONS, LIMITATIONS AND EXCEPTIONS

This *Phase I Environmental Site Assessment* (the Report) has been prepared in reference to six (6) parcels, namely 8-51 26th Avenue (Block 906, Lot 1), 8-01 26th Avenue (Block 906, Lot 5), 4-55 26th Avenue (Block 907, Lot 1), 4-05 26th Avenue (Block 907, Lot 8), 4-57 26th Avenue (Block 908, Lot 12) and 4-34 26th Avenue (Block 909, Lot 35) as described in the report. . The Report is in accordance with an agreement in place with Mr. Dennis Moshopoulos, on the date of this Report, and with the limitations described below, all of which are integral parts of this Report. Please refer throughout to Figure 2 – Property Plan, Appendix B.

GCE has performed this Phase I Environmental Site Assessment in general conformance with the scope and limitations of *ASTM Standard E 1527-05, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. This Report was prepared with no exceptions or deletions from ASTM Standard E 1527-05.

This *Phase I Environmental Site Assessment* has been prepared to assess 6 adjoining parcels with industrial/manufacturing facilities, with respect to the range of contaminants within the scope of the *Comprehensive Environmental Response, Compensation and Liability Act (CERCLA)* (42 U.S.C. §9601), and with respect to petroleum products as well. As such, this practice is intended to permit Mr. Dennis Moshopoulos, owner, to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability: that is, the practices that constitute “all appropriate inquiry into the previous ownership and uses of the Site consistent with good commercial or customary practice” as defined in 42 U.S.C. § 9601(35) (B).

In defining a standard of good commercial and customary practice for conducting an environmental site assessment of a parcel of property, the goal of the processes established by this practice is to identify *recognized environmental conditions*. The term recognized environmental conditions means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis conditions* that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not recognized environmental conditions. A *business environmental risk* is defined in ASTM E 1527-05 as a risk which can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice.

The information reported was obtained through sources deemed reasonably ascertainable, as defined in ASTM Standard E 1527-05; a visual site survey of areas readily observable, easily accessible or made accessible by the Site contact and interviews with owners, agents, occupants, or other appropriate persons involved with the Site. Municipal information was obtained through review of reasonably ascertainable standard government record sources and interviews with the authorities having jurisdiction over the Site. Findings, conclusions, and recommendations included in the Report are based on our visual observations in the field, the municipal information reasonably obtained, information provided by the Client, and/or a review of readily available and supplied documents and drawings. GCE relies completely on the information, whether written, graphic, or verbal, provided by the Site contact or as shown on any documents reviewed or received from the Site contact, owner or agent, or municipal source, and assumes that information to be true and correct. Although there may have been some degree of overlap in the information provided by these various sources, GCE did not attempt to independently verify the accuracy or completeness of all information reviewed or received during the course of these environmental services.

The observations in this Report are valid on the date of the investigation. Where access to portions of the Site or to structures on the Site was unavailable or limited, GCE renders a limited opinion based solely on information obtained as part of this report as to the presence of hazardous substances or petroleum products in that portion of the Site or structure. Inaccessible portions of the Site are described below. In addition, GCE renders a limited opinion based solely on information obtained as part of this report as to the presence of, or indirect evidence relating to, hazardous substances or petroleum products where direct observation of the interior walls, floor, or ceiling of a structure was obstructed by objects or coverings on or over these surfaces.

It is acknowledged that GCE judgments shall not be based on scientific or technical tests or procedures beyond the scope of the Services or beyond the time and budgetary constraints imposed by the Client. It is acknowledged further that GCE conclusions shall not rest on pure science but on such considerations as economic feasibility and available alternatives. The Client also acknowledges that, because geologic and soil formations are inherently random, variable, and indeterminate in nature, the Services and opinions provided under this Agreement with respect to such Services are not guaranteed to be a representation of actual conditions on the Site, which are also subject to change with time as a result of natural or man-made processes, including water permeation. In performing the Services, GCE shall use that degree of care and skill ordinarily exercised by environmental consultants or engineers performing similar services in the same or similar locality. The standard of care shall be determined solely at the time the Services are rendered and not according to standards utilized at a later date. The Services shall be rendered without any other warranty, expressed or implied, including, without limitation, the warranty of merchantability and the warranty of fitness for a particular purpose.

The Client and GCE agree that to the fullest extent permitted by law, GCE shall not be liable to the Client for any special, indirect or consequential damages whatsoever, whether caused by GCE'S negligence, errors, omissions, strict liability, breach of contract, breach of warranty or other cause or causes whatsoever.

The ASTM Standard E 1527-05 does not encompass analytical testing to evaluate asbestos containing materials, radon, lead-containing paint, drinking water quality, indoor air quality,

stored chemicals, debris, fill materials, surface water, or subsurface samples (soil and groundwater) as part of a Phase I ESA. Any analytical testing performed at the Site has been conducted in accordance with the agreement in place with Mr. Dennis Moshopoulos. Unless otherwise specified herein, such testing involves screening methods intended to provide a broad and approximate evaluation of conditions at readily accessible portions of the Site, limited by project constraints, and should not be construed as a comprehensive program designed to comply with a specific regulatory program. If a thorough and regulatory-compliant study is warranted based on the findings of the Phase I ESA, GCE will recommend the appropriate further investigation. In certain cases, quantitative laboratory testing is performed as part of the assessment and analyses have been conducted by an outside laboratory. GCE relies upon the data provided by the outside laboratory, and has not conducted an independent evaluation of the reliability of this data.

The assessment was conducted in a manner consistent with the level of care and skill ordinarily exercised by members of the profession, and in accordance with generally accepted practices of other consultants currently practicing in the same locality under similar conditions. No other representation, expressed or implied, and no warranty or guarantee is included or intended. The Report speaks only as of its date, in the absence of a specific written update of the Report, signed and delivered by GCE.

Additional information that becomes available after our survey and draft submission concerning the Site should be provided to GCE so that our conclusions may be revised and modified if necessary, at additional cost. This Report has been prepared in accordance with our Standard Conditions for Engagement, which is an integral part of this Report.

1.4 SPECIAL TERMS AND CONDITIONS (USER RELIANCE)

This *Phase I Environmental Site Assessment* (the Report) has been prepared for Mr. Dennis Moshopoulos for the property. This Report can be relied upon by only the parties stated in the transmittal letter at the front of this Report. GCE's liability to the user of the Report is limited to the cost of the Report. Amendments to GCE's limitations as stated herein that may occur after issuance of the Report are considered to be included in this Report. Payment for the Report is made by, and GCE's contract and Report extends to Mr. Dennis Moshopoulos only, in accordance with the agreement in place with Mr. Dennis Moshopoulos.

1.5 SIGNIFICANT DATA GAPS

Any data gaps identified herein, as defined by ASTM Practice E 1527-05 § 3.2.20, are not considered to have significantly affected the ability to identify recognized environmental conditions in connection with the Site and do not alter the conclusions of this Report.

2.0 PROPERTY DESCRIPTION

2.1 SITE LOCATION

The Site is comprised of six (6) discrete parcels as noted above and is located between 4th Street and 9th Street, approximately 20 feet from the northeastern intersection of 4th Street and 26th Avenue. According to the New York City Building Department, the subject Site is legally designated as six (6) lots: Block 906, Lot 1; Block 906, Lot 5; Block 907, Lot 1; Block 907, Lot 8; Block 908, Lot 12; and Block 909, Lot 35; and is zoned as Industrial and Manufacturing District. The Site location is bounded approximately by the East River (North), 9th Street (East), 26th Avenue (South) and Commercial/Residential Area (West).

2.2 PROPERTY DESCRIPTION

The Site location consists of an approximately 8.16 acres (355,702 sq. ft) irregular-shaped parcel of land and is comprised of six (6) parcels, developed with seven (7) buildings, which are as follows: a one-story warehouse with a mezzanine (Building A) in Parcel 3; a one-story office/manufacturing building with a mezzanine and a partial basement (Building B) in Parcel 3; a one-story warehouse with a partial basement (Building C) in Parcel 2; a one-story warehouse (Building D) in Parcel 1; a one-story office building (Building E) in Parcel 3; a one-story manufacturing building (Building F) in Parcel 4; and a two-story manufacturing building (Building G) in Parcel 4. The onsite facilities were constructed between as early as 1897 and as late as 1943.

Super Stud Building Products Inc. utilizes the buildings located on the Property as follows: Buildings A, B and C for the manufacturing, packaging and distribution of steel studs for drywall and curtainwall framing; Building B and Building E for office purposes and Building D for the manufacturing and packaging of stucco, under the name Energex Wall Systems.

Parcel 1 consists of approximately 27,565 sq. ft, located on the eastern portion of the Site and is addressed as 8-51 26th Avenue, Astoria, Queens, New York. According to GCE's visual inspection, Parcel 1 is developed with a one (1) story manufacturing building (Building D) with a partial basement level. Building D is currently occupied by Energex Wall Systems, who manufactures stucco and other wall systems. The basement is used for general storage of stucco manufacturing supplies. The remainder of the property is occupied by an asphalt/concrete paved area. According to online NY City Speed database map, Building D was constructed c 1935, building covers approximately 10,700 sq. ft and is currently zoned for Industrial and Manufacturing District by the City of New York. The building is a load-bearing masonry structure constructed of brick and concrete-block walls. The manufacturing/warehouse area occupies approximately 90% of the overall square footage of the building while the remaining spaces were occupied by storage in the basement. The interior has been divided into several spaces designated for warehouse, storage etc. The building sits directly along the central portion of the property with the asphalt paved area surrounding the building.

Parcel 2 consists of approximately 42,051 sq. ft, located on the eastern portion of the Site and is addressed as 8-01 26th Avenue, Astoria, Queens, New York. According to GCE's visual inspection, Parcel 2 is developed with a one-story manufacturing/warehouse building (Building

C) with a partial basement level. Building C is currently occupied by Energex Wall Systems for storage of stucco products. The remainder of the property is occupied by an asphalt/concrete paved area. GCE's visual inspection revealed the storage of manufacturing supplies. GCE's visual inspection also revealed the presence of several empty drums, fuel oil lines, machine parts storage room, manufacturing equipment lines etc. Poor housekeeping with leaking water and stucco products dumping was evident in this building. GCE believes that this building was used for historic metal/stud manufacturing process. According to online NY City Speed database map, Building C was constructed c 1943, covers approximately 13,700 sq. ft and is currently zoned as Industrial and Manufacturing District by the City of New York. The building is a load-bearing masonry structure constructed of brick and concrete-block walls. The manufacturing/warehouse area occupies approximately 90% of the overall square footage of the building while the remaining spaces are occupied by storage in the basement. The interior has been divided into several spaces designated for warehouse, storage etc. The building sits within the central portion of the property with asphalt paved area surrounding the building.

Parcel 3 consists of approximately 101,500 sq. ft, located on the eastern portion of the Site and is addressed as 4-55 26th Avenue, Astoria, Queens, New York. According to GCE's visual inspection, Parcel 3 is developed with three (3) one (1) story buildings namely Building A, B and E. Building A is currently occupied for rigging, welding, engine repair purposes. Building B is currently occupied by Energex Wall Systems for storage and packaging of stucco products. GCE could not gain access to Building E, and based on a field interview, Building E is occupied for office purposes. GCE's visual inspection revealed the presence of overhead cranes for steel plates, 55 gallon drums, cranes etc in Building A, overhead cranes, office area in mezzanine level and ground level, and storage area in partial basement area in Building B. According to online NY City Speed database map, Building C was constructed c 1931, buildings cover approximately 78,000 sq. ft., and is currently zoned for Industrial and Manufacturing District by the City of New York. The building is a load-bearing masonry structure constructed of brick and concrete-block walls. The manufacturing/warehouse area occupies approximately 90% of the overall square footage of the building while the remaining spaces were occupied by storage in the basement. The interior has been divided into several spaces designated for warehouse, storage, office etc. The buildings sit within the central portion of the property with the asphalt paved area surrounding the building.

Parcel 4 consists of approximately 119,349 sq. ft, located on the eastern portion of the Site and is addressed as 4-05 26th Avenue, Astoria, Queens, New York. According to GCE's visual inspection, Parcel 4 is developed with two (2) buildings namely Building F, a one-story mixed-occupancy building and Building G, a two (2)-story manufacturing building. Building F is currently occupied by four (4) tenants, utilized for commercial purposes such as exterior wall supply, sound maintenance, IV Square and Rainbow transit. Rainbow transit has a mezzanine level. Building G is currently occupied by eight (8) tenants, utilized for wood shop, air conditioning, electrical appliances, Plumbing, Mechanical etc on the ground floor and a lighting fixtures corporation on the first floor. GCE could not gain access to some of the tenant spaces in both buildings. According to online NY City Speed database map, Building C was constructed c 1931, buildings cover approximately 90,000 sq. ft, and the property is currently zoned for Industrial and Manufacturing District by the City of New York. The building is a load-bearing masonry structure constructed of brick and concrete-block walls. The manufacturing/warehouse area occupies approximately 90% of the overall square footage of the building while the

remaining spaces were occupied by storage in the basement. The interior has been divided into several tenant spaces designated for warehouse, storage, office etc. The building sits directly along the central portion of the property with the asphalt paved area surrounding the building.

Parcel 5 consists of approximately 36,580 sq. ft, located on the eastern portion of the Site and is addressed as 4-57 26th Avenue, Astoria, Queens, New York. According to GCE's visual inspection, Block 908, Lot 12 is currently vacant.

Parcel 6 consists of approximately 28, 657 sq. ft, located on the eastern portion of the Site and is addressed as 4-34 26th Avenue, Astoria, Queens, New York. According to GCE's visual inspection, Block 909, Lot 35 is currently vacant.

2.3 SITE HISTORY

According to available online information from the New York City Building Department, no Certificates of Occupancies were available for Buildings A to G. According to available information from the online New York City Map, Buildings A, B and E were constructed in c 1931, Building C was constructed in c 1943, Building D was constructed in c 1935 and Buildings F and G were constructed in c 1931.

According to available information from Mr. Christopher Giovanis, from Alma Realty, representative of the property owner, the existing buildings have been used for industrial and commercial use since 1970s.

According to EDR Environmental Lien Search report and interview with Mr. Christopher Giovanis representative of the property owner, the owner for Parcels 1, 2, 3 and 5 is identified as Superior Steel Studs Inc, 4-57 26th Avenue, Astoria, Queens, New York 11102; owner for Parcel 4 is identified as Top Cove Associates Inc, 14-51 Broadway, Long Island, New York 11106; and the owner for Parcel 6 is identified as Rayan Realty Corp, 8-01 26th Avenue, Astoria, Queens, New York 11102. Further development history of the Site is discussed in Section 4.1.

2.4 SITE SERVICES & UTILITIES

The Property is serviced by the following municipal services and utilities:

PROPERTY - MUNICIPAL SERVICES AND UTILITIES	
Utility	Provider
Potable Water Supply	New York City
Sewage Disposal System	New York City
Electrical Service	Con Edison
Telephone	Verizon
Cooling Systems	Centralized, units
Heating	Con Edison
Natural Gas Service	Con Edison

2.5 ADJOINING PROPERTIES

Property use in the vicinity of the Site is primarily characterized by commercial use, business use and transportation, as well as undeveloped land.

ADJOINING PROPERTIES	
North	The Site is bounded to the north with East River.
South	The Site is bounded to the south by 26 th Avenue and commercial/residential properties.
East	The Site is bounded to the east by 9 th Street.
West	The Site is bounded to the west by commercial/residential/properties.

No visual evidence of adverse environmental conditions was observed during the survey of the adjoining properties. The Site listings are further discussed in Section 4.1.

3.0 USER PROVIDED INFORMATION

The following section summarizes information provided by Mr. Christopher Giovanis (representative of the client) with regard to this Phase I Environmental Site Assessment. The User Questionnaire was completed and submitted to GCE by Mr. Christopher Giovanis. The information requested in the User Questionnaire is intended to assist in gathering information that may be material to identifying recognized environmental conditions in connection with the Site.

3.1 TITLE AND JUDICIAL RECORDS

3.1.1 Environmental Liens

GCE's review of a the Environmental Lien Search Report, dated July 23, 2013, provided by Environmental Data Resources (EDR), and obtained by GCE for the client, did not reveal any environmental liens.

3.1.2 Activity and Use Limitations

GCE's review of a the Environmental Lien Search Report, dated July 23, 2013, provided by Environmental Data Resources (EDR), and obtained by GCE for the client, did not reveal any activity and use limitations.

3.2 SPECIALIZED KNOWLEDGE

Mr. Christopher Giovanis provided no specialized knowledge that is material to recognized environmental conditions in connection with the Site. GCE was provided with or made aware of previous environmental assessments or other documentation that is material to recognized environmental conditions in connection with the Site.

3.3 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

Mr. Christopher Giovanis has provided no commonly known or reasonably ascertainable information about the local community around the Site that is material to recognized environmental conditions in connection with the Site.

3.4 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

Mr. Christopher Giovanis has provided no information regarding valuation reduction for environmental issues in connection with the Site.

3.5 OWNER, PROPERTY MANAGER, AND OCCUPANT INFORMATION

According to EDR Environmental Lien Search report and interview with Mr. Christopher Giovanis representative of the property owner, the owner for Parcels 1, 2, 3 and 5 is identified as Superior Steel Studs Inc, 4-57 26th Avenue, Astoria, Queens, New York 11102; owner for Parcel 4 is identified as Top Cove Associates Inc, 14-51 Broadway, Long Island, New York 11106; and

owner for Parcel 6 is identified as Rayan Realty Corp, 8-01 26th Avenue, Astoria, Queens, New York 11102.

3.6 REASON FOR PERFORMING PHASE I ESA

Mr. Dennis Moshopoulos retained GCE to complete this Phase I Environmental Site Assessment for a property transaction.

4.0 RECORDS REVIEW

4.1 STANDARD ENVIRONMENTAL RECORDS

A review of standard environmental databases maintained by Federal, State, and tribal offices was completed through Environmental Data Resources, Inc. (EDR) of Milford, Connecticut. The databases were searched for properties with reported environmental conditions located within approximate minimum search distances as specified by ASTM Standard E 1527-05, by using geocoding information that identified the coordinates of the properties in the databases or by checking the street addresses of practically reviewable non-geocoded “orphan” properties within the same zip code. The database Report is presented in Appendix E.

The EDR report did not identify any “orphan sites.” Orphan sites are those facilities that could not be automatically mapped or geocoded due to inadequate location information.

The following table provides a summary of the findings of the environmental database report. Specific properties identified within the database report are further discussed below.

SUMMARY OF FEDERAL, STATE, AND TRIBAL AGENCY DATABASE FINDINGS			
Regulatory Database	Approximate Minimum Search Distance	Property Listings	Off-Site Listings
Federal NPL Sites	1.0 mile	0	0
Federal Delisted NPL Sites	1.0 mile	0	0
Federal CERCLIS Sites	0.5 mile	0	0
Federal CERCLIS NFRAP Sites	0.5 mile	0	0
Federal RCRA CORRACTS Sites	1.0 mile	0	0
Federal RCRA non-CORRACTS TSD Sites	0.5 mile	0	0
Federal RCRA Generators Sites	0.250	0	1
Federal Engineering / Institutional Control Sites	0.5 mile	0	2
Federal ERNS Sites	Target Property	0	0
State and Tribal equivalent CERCLIS Sites	1.0 mile	0	0
State Spills (NY Spills)	Target Property	2	18
State and Tribal Landfill or Solid Waste Disposal Sites	0.5 mile	0	0
State and Tribal Leaking Storage Tank Sites	0.5 mile	0	13
State and Tribal Registered Storage Tank Sites	0.25	1	19
Local Lists of Registered Storage Tank Sites	0.25	1	1
RCRA Non-Gen/NLR	0.25	0	9
FINDS	0.25	0	0
Manifest	0.25	0	10
US Hist Auto Stations	0.25	0	9
E Designation	0.25	0	0
Drycleaners	0.25	0	1

Brownfields	0.50	0	0
VCP	0.50	0	1
EDR MGP	1.00	0	2
US Hist Cleaners	0.25	0	9

The Site is listed in the below reviewed databases:

Site Name: SUPERIOR STEEL STUDS INC

Databases: UST, HIST UST

Address: 4-57 26th AVENUE – Parcel 5 ASTORIA, NY

Distance: TARGET PROPERTY

Direction: THE SITE

Comments: The Target property is listed in the “Underground Storage Tank (UST)” and “Historical Underground Storage Tank (HIST UST)” databases. According to New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage (PBS) database (PBS No.2-305383) and EDR report, there is one (1) ‘closed-in-place’ 4,000- gallon UST listed for this site and closed in 1996. The site is not listed as a leaking storage tanks incident report and/or NY Spills information database (SPILLS) with respect to this tank. The property status listed under UST & HIST UST database is considered to be a *recognized environmental condition*.

Site Name: PLEKS PRODUCTS

Databases: NYS SPILLS, RCRA NONGEN, FINDS

Address: 4-57 26th AVENUE/25-50 9th STREET – Parcel 5

Distance: TARGET PROPERTY

Direction: THE SITE

Comments: The Target property is listed as NY SPILLS site. According to NYSDEC Spills database (Spill No.9710268) and EDR report, the SPILLS case was opened on December 03, 1997, when unknown quantity of an amount of material was spilled onto surface water due to an unknown cause. This SPILLS case was closed on December 5, 1997. The site is also listed in RCRA Non Generator and FINDS database. No violations were recorded for the site. Based on their status and description, this SPILLS, RCRA Non Gen and FINDS listings issued for the site is not likely to environmentally impact the site.

Site Name: SUPER STUD BUILDING

Databases: NYS SPILLS

Address: 8-01 26th AVENUE – Parcel 2

Distance: TARGET PROPERTY

Direction: THE SITE

Comments: The Target property is listed in the NY SPILLS site database. According to NYSDEC Spills database (Spill No.9602429) and EDR report, the SPILLS case was opened on May 20, 1996, when unknown quantity of an amount of limestone was spilled onto surface water due to an unknown cause. This SPILLS case was closed on May 21, 1996. Based on their status and description, this SPILLS listing issued for the site is not likely to environmentally impact the site.

Site Name: SUPER STUD BUILDING

Databases: NYS SPILLS

Address: 8-01 26TH AVENUE – Parcel 2

Distance: TARGET PROPERTY

Direction: THE SITE

Comments: The Target Site is listed as NY SPILLS site. According to NYSDEC Spills database (Spill No.9602429) and EDR report, the SPILLS case was opened on May 20, 1996, when unknown quantity of an amount of limestone was spilled onto surface water due to an unknown cause. This SPILLS case was closed on May 21, 1996. Based on their status and description, this SPILLS listing issued for the site is not likely to environmentally impact the site.

Eleven (11) of the remaining EDR-identified sites are located hydrologically up-gradient of the Site but based on their status, these sites listed in the EDR report are not likely to environmentally impact the Site. None of the remaining sites listed in the EDR report are located on the Site, on the adjacent properties, or located hydrologically up-gradient of the Site. Based on their status and location, the remaining sites listed in the EDR report are not likely to environmentally impact the Site.

4.2 LOCAL REGULATORY AGENCY RECORDS

New York City Building Department

GCE has submitted a written request to the Building Department for information regarding the generation, transportation, storage, treatment, disposal, and/or spills or releases of hazardous substances or petroleum products at the Site. As of the date of this Report, GCE has not received a response to this inquiry. Upon receipt of the agency response, if the provided information has a material effect on the findings of this Report, GCE will forward this information as an addendum to this Report. If no response is received, or no material information is identified, our Report will not be modified.

New York State Department of Health (NYSDOH)

GCE has submitted a written request to the NYSDOH for information regarding the generation, transportation, storage, treatment, disposal, and/or spills or releases of hazardous substances or petroleum products at the Site. As of the date of this Report, GCE has not received a response to this inquiry. Upon receipt of the agency response, if the provided information has a material effect on the findings of this Report, GCE will forward this information as an addendum to this Report. If no response is received, or no material information is identified, our Report will not be modified.

New York State Fire Department (FDNY)

GCE has submitted a written request to the FDNY for information regarding the generation, transportation, storage, treatment, disposal, and/or spills or releases of hazardous substances or petroleum products at the Site. As of the date of this Report, GCE has not received a response to this inquiry. Upon receipt of the agency response, if the provided information has a material

effect on the findings of this Report, GCE will forward this information as an addendum to this Report. If no response is received, or no material information is identified, our Report will not be modified.

New York State Department of Environmental Conservation (NYSDEC)

GCE has submitted a written request to the NYSDEC for information regarding the generation, transportation, storage, treatment, disposal, and/or spills or releases of hazardous substances or petroleum products at the Site. As of the date of this Report, GCE has not received a response to this inquiry. Upon receipt of the agency response, if the provided information has a material effect on the findings of this Report, GCE will forward this information as an addendum to this Report. If no response is received, or no material information is identified, our Report will not be modified.

4.3 PHYSICAL SETTING

4.3.1 Topography

The Site is located at an elevation of approximately 23 feet above mean sea level (msl). The topography of the Site is level. The Site is located in a relatively flat area, and the general slope of the target property is the north northwest (NNW) (see the enclosed Figure 1: Locus Map in Appendix B, which depicts the location of the Site on the USGS topographic quadrangle).

4.3.2 Geology and Soils

According to the Hydrogeologic Framework of Long Island, New York, U.S. Geological Survey, 1989, the geology in the area of the Site consists of approximately 100 feet of glacial deposits composed of clay, sand, gravel and boulders, which form the Upper Glacial Aquifer, underlain by bedrock consisting of crystalline metamorphic and igneous rocks.

4.3.3 Hydrogeology and Hydrology

There are no surface water resources on the Site. According to the Flood Insurance Rate Map for the City of New York, New York Bronx, Richmond, New York, Queens and Kings Counties, Community Panel No. 360497 0032B, effective date November 16, 1983, the northern portion of the Site is located within an area between the limits of the 100-year floor and 500-year flood; or certain areas subject to 100-year flooding with average depths less than one (1) foot or where the contributing drainage area is less than one (1) square mile; or areas protected by levees from the base flood (Zone B). The southern portion of the Site is located within an area of minimal flooding outside the 500-year flood zone (Zone C).

Based on the USGS Water Table on Long Island, New York, March-April 1984, regional groundwater flow direction is to the north-northwest towards a portion of Pot Cove, an inlet of the East River located adjacent to the north-northwest of the Site. Based on the surface water elevation as observed in the nearby Pot Cove, depth to groundwater in the area of the Site is not expected to exceed approximately 5 feet below grade.

According to the State Soil Geographic Database (STATSGO) data, soil in the vicinity of the Site is represented by Urban Land. Soil permeability and erosion potential is not reported.

Storm water runoff from the northern portion of the Site in the area of Building F&G discharges via surface runoff into two (2) catch basin located on the northern portion of the Site, which, according to prior Phase I report, is connected to the municipal storm sewer system and via surface percolation to the north-northwest towards a portion of Pot Cove located adjacent to the north-northwest of the Site. No petroleum products and/or hazardous materials entering this catch basin were observed. Storm water runoff from the remainder of the Site discharges via both surface runoff and surface percolation to the north-northwest towards a portion of Pot Cove located adjacent to the north-northwest of the Site.

GCE's visual inspection revealed the presence of suspect floor drains in Building F & G. Historical usage of Parcel 4 as "Lumber/Wood working", "Rainbow Transit" and "Machine Shops" may have environmentally impacted the property via these floor drains.

Local groundwater gradient is expected to follow surface topography; therefore, groundwater flow near the Site is expected to flow to the north. Estimated groundwater levels and/or flow direction may vary due to seasonal fluctuations in precipitation, local usage demands, geology, underground structures, or dewatering operations. Groundwater depths and flow gradients are best evaluated by a subsurface investigation involving the installation of at least three groundwater monitoring wells and precise measurements of hydrostatic pressure. Monitoring wells were not observed on the Site.

4.4 HISTORICAL USE OF THE PROPERTY AND ADJOINING PROPERTIES

GCE attempted to determine the history of the Site and the surrounding area dating back to 1940 or to the first developed use. To determine this history, GCE relies upon the ASTM designated standard historical sources (which can include aerial photographs, fire insurance maps, property tax files, recorded land title records, USGS topographic maps, street directories, building department records, zoning/land use records, interviews and/or other historical sources). The following table summarizes the findings of the research presented below pertaining to historical Site and surrounding area uses.

HISTORICAL USE SUMMARY			
Period	Historical Uses		Source(s)
	Site	Surrounding Area	
Prior to 1940	Existing Buildings in all Parcels Parcel 5 and 6- Vacant	Commercial/Residential	-Sanborn Maps
1940 to 1960	Existing Buildings in all Parcels and occupied by various manufacturing, lumber/wood workings etc Parcel 5 and 6- Vacant	Commercial/Residential	- Online NY City information -Aerial Photographs -Sanborn Maps
1961 to Present	Existing Buildings in all		-Sanborn Maps

	Parcels Buildings A, B,C, D and Parcel 5 occupied by Superior Steel Products Inc Auto Repair Shop in Building E Parcel 6- Vacant	Commercial/Residential	-Aerial Photographs -USGS Topo Maps -City Directory -Building Dept records
--	---	------------------------	--

Based on GCE's review of the historical information obtained as part of this assessment, historical adjoining and surrounding property usage as automotive facilities may have environmentally impacted the Site and the presence of properties with these historical uses in the vicinity of the Site is considered to be a *recognized environmental condition*.

The review of historical information regarding the Site and surrounding areas is presented below.

STANDARD HISTORICAL SOURCES DETAIL SUMMARY	
Historical Source	Observations
Aerial Photographs	<p>Aerial photographs dated 1924, 1941, 1945, 1954, 1966, 1975, 1984, 1994, 1995, 2006, 2009 and 2011 were reviewed.</p> <p><u>Site:</u> 1966 aerial photograph show the northern and eastern portions of the Site as developed with the existing Buildings A, B, C, D and E and the western portion of the Site as developed with a historical shed. The 1975 aerial photograph map show the northern and eastern portions of the Site as developed with the existing Buildings A, B, C, D and E, the western portion of the Site as developed with a historical shed and the southern portion of the Site as developed with a historical one (1)-story manufacturing building. The 1984 and 1994 aerial photograph show the northern and eastern portions of the Site as developed with the existing Buildings A, B, C, D and E and the southern portion of the Site as developed with a historical one (1)-story manufacturing building.</p> <p><u>Surrounding Area:</u> The aerial photographs show the surrounding area as utilized for residential, commercial and transportation purposes.</p>
Fire Insurance Maps	<p>Sanborn maps dated 1898, 1915, 1928, 1936, 1948, 1950, 1967, 1977, 1979, 1981, 1985, 1986, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 1999, 2001, 2002, 2003, 2004, 2005 and 2006 were reviewed.</p> <p><u>Site:</u> Parcel 5 and 6 is shown as vacant, utilized for storage purposes in all sanborn maps.</p> <p>1898- The 1898 Sanborn Fire Insurance map shows Buildings F & G are developed with a historical two (2)-story unidentified houses, Building A as occupied by "L Morton-Steam Stone" and developed with a historical one (1)-story building utilized for "cutting and planing" and a historical two (2)-story unidentified house, Building B as occupied by "Tisdale Lumber & Coal Yard" and developed with a historical two (2)-story building utilized for the storage of coal products, a historical two (2)-story lumber shed with an attached one (1)-story stable and additional one (1)-story attachment utilized for unknown purposes, and two (2) one (1)-story unidentifiable structures, the east-northeastern portion of the Site as developed with a historical two (2)-story unidentified house and the southeastern portion of the Site as developed with a historical one (1)-story unidentified building with an attached two (2)-story stable and two (2) unidentified historical structures. In addition, a portion of Orchard Boulevard extends west-east through the central portion of the Site.</p> <p>1915 – The 1915 Sanborn Fire Insurance map shows Building G as occupied with "Planing Mill", Building F as occupied with "Lumber/carpenter Sheds", Building A as occupied with small dwelling and auto shop on the southern portion of Building A. Building B as occupied by</p>

	<p>“Geo. Brown & Co. Stream Stone Works” and developed with a historical one (1)-story cutting shed building, a historical one (1)-story stable, the existing Building B utilized for cutting and planing and office purposes, and several historical one (1)-story sheds, Building C & D as occupied by “Tisdale Lumber & Coal Yard” and developed with a historical two (2)-story building labeled “coal pockets” with an associated coal yard, a historical one (1)-story building utilized for the storage of shingles, several historical one (1) and two (2)-story lumber sheds and the remainder of the Site as utilized for the storage of lumber piles.</p> <p><i>1936</i> – The 1936 Sanborn Fire Insurance map shows Building G as occupied with “Planing Mill” and wood shops, Building F as occupied with “Lumber/Carpenter Sheds”, Building A as occupied with “Weisberg Baer Co-Sash Door Factory” and lumber shop. Building B as occupied with “Marcheth Marble Co, Inc- Machine Shop”. Building E occupied by unknown dwelling. The 1936 sanborn also shows one (1) underground storage tank listed as “Gas Tank” inside Building E. Building B as occupied by “Geo. Brown & Co. Stream Stone Works” and developed with a historical one (1)-story cutting shed building, a historical one (1)-story stable, the existing Building B utilized for cutting and planing and office purposes, and several historical one (1)-story sheds, Building C & D as occupied by “Tisdale Lumber & Coal Yard” and developed with a historical two (2)-story building labeled “coal pockets” with an associated coal yard, a historical one (1)-story building utilized for the storage of shingles, several historical one (1) and two (2)-story lumber sheds and the remainder of the Site as utilized for the storage of lumber piles.</p> <p>The 1948 and 1950 Sanborn Fire Insurance maps show Building G as occupied with “Planing Mill” and wood shops, Building F as occupied with “Lumber/Carpenter Sheds” the northern and eastern portions of the Site as occupied by Morey Machinery Co. Inc. and developed with the existing Buildings A, B, C, D and E, utilized for machinery and resembling purposes and the southern portion of the Site as developed two (2) historical one (1)-story storage buildings. The 1948 sanborn also shows one (1) underground storage tank listed as “Gas Tank” outside Building E.</p> <p>The adjacent property, to the eastern side of Parcel 6 property is occupied with “Metal Container Mfg” in 1948 sanborn map.</p> <p>The 1967-1979 Sanborn Fire Insurance maps show the northern and eastern portions of the Site as developed with the existing Buildings A, B, C, D and E and the western portion of the Site as developed with a historical shed. Building G & F as occupied with wood working and machine shops. The northern and eastern portions of the Site as occupied by Morey Machinery Co. Inc. and developed with the existing Buildings A, B, C, D and E, utilized for machinery and resembling purposes and the southern portion of the Site as developed two (2) historical one (1)-story storage buildings. The 1967-1979 sanborns also shows one (1) underground storage tank listed as “Gas Tank” exterior of Building E.</p> <p><i>1981 – 2006</i> – The 1981, 1985, 1986, 1988, 1989, 1990, 1991, 1992, 1993, 1994, 1995, 1996, 1999 and 2001-2006 Sanborn Fire Insurance maps and the 1984 and 1994 aerial photograph show the northern and eastern portions of the Site as developed with the existing Buildings A, B, C, D and E and the southern portion of the Site as developed with a historical one (1)-story manufacturing building and occupied by “Superior Steel Studs”. The 1981sanborn also shows one (1) underground storage tank listed as “Gas Tank” exterior of Building E. G & F as occupied with wood working and machine shops. The 1985-2006 shows Building E as occupied with “Auto Repair” facility.</p> <p><u>Surrounding Area:</u> The maps show the surrounding area as utilized for residential, commercial/industrial and transportation purposes.</p>
Topographic Maps	<p>Topographic maps dated 1897, 1947, 1956, 1966, 1979 and 1995 were reviewed.</p> <p><u>Site:</u> The 1897 historical topographic map shows the Site as developed with two (2) historical</p>

	structures of unknown usage located on the western portion of the Site and a historical structure located along the eastern border of the Site. The 1966-1979 and 1995 historical topographic maps show the Site as vacant land. <u>Surrounding Area:</u> The topographic maps depict some structures for the surrounding area along with the roadways and built up area.
City Directory	City directories dated 1922 through 2012 were reviewed. <u>Site:</u> According to the EDR City Directory report dated June 16, 2013, Parcel 2 was listed as “Superior Stud Bldg Products” in 1983, “Superior Stud Bldg Products” and “Pleko East Inc” in 1991, “Superior Stud Bldg Products”, “Pleko East Inc” and 12 th Street Ints From” in 2000, “Superior Stud Bldg Products” and “Pleko East Inc” in 2007, “Superior Stud Bldg Products” and “ U 2 Rigging & Hoisting Inc” in 2012; Parcel 4 was listed as “Weisberg Baer Co sash trim” from 1934 to 1945, “Willys Plate Graining Corp”, “Spaeth Displays Inc”, “Intercoastal Door Corp”, “Goldmark Plastic Compounds Inc” and “Century Laminated Prods Corp” in 1962, “Svce & Parts”, “Royal Rose Range Co Inc”, “Main Office”, “Automatic Range Co Inc” in 1967 and 1970, “Federal Enterprises” in 1983, “Easyride Administration” and “Child Welfare Association” in 1991, “Retrospektiv”, “Pstv Inflnc Fshns” and “Astron Iron Works” in 2000, “The Shop Inc”, “Nova Star Electric Corp”, “Floman Enterprises Inc”, “Dalston NY Inc” and “Black Bull Corp” in 2007 and “ Viv Contracting Corp”, “Pancyprian Association Inc”, “Envee Construction Inc”, “Compsec Electric Corp”, “Basset Inc”, “B S Mechanical Contracting” and “Bay Contracting Corp” in 2012; and Parcel 5 is listed as “Morey Machy Co Inc” in 1950.. The remaining years were not shown with any results in City Directory. <u>Surrounding Properties:</u> The surrounding area is listed as commercial properties.
Recorded Land Title Records	GCE’s review of a the Environmental Lien Search Report, dated July 23, 2013, provided by Environmental Data Resources (EDR), and obtained by GCE for the client, did not reveal any environmental liens or activity and use limitations.
Property Tax Records	According to EDR Environmental Lien Search report and interview with Mr. Christopher Giovanis, representative of the property owner, the owner for the Parcels 1, 2, 3 and 5 is identified as Superior Steel Studs Inc, 4-57 26 th Avenue, Astoria, Queens, New York 11102; owner for Parcel 4 is identified as Top Cove Associates Inc, 14-51 Broadway, Long Island, New York 11106; and owner for Parcel 6 is identified as Rayan Realty Corp, 8-01 26 th Avenue, Astoria, Queens, New York 11102.

4.5 PREVIOUS ENVIRONMENTAL REPORTS

A prior Phase I Environmental Site Assessment, except for Parcel 4 (Block 907, Lot 8), was conducted for the Site by GCE in June 2006. This prior report is available from GCE.

5.0 PROPERTY RECONNAISSANCE

On July 17, 2013, Mr. Ravi Kumar Kolaventi, of GCE conducted a site inspection to assess the possible presence of petroleum products or hazardous materials, substances or wastes. GCE’s investigation included reconnaissance of the Site and adjacent properties, to identify any potential for the presence of hazardous materials, substances or wastes or petroleum products at or in the vicinity of the Site.

5.1 METHODOLOGY AND LIMITING CONDITIONS

The Site reconnaissance consisted of visual and/or physical observations of the Site and improvements, adjoining properties as viewed from the Site boundaries, and the surrounding area based on visual observations made from adjacent public thoroughfares. At the time of the survey, the weather was overcast and approximately 95° Fahrenheit. GCE attempted to inspect all areas suspected to contain petroleum products and/or hazardous substances. During the site inspection, all areas of the Site were inspected, except for the roofs of all seven (7) existing,

office/manufacturing buildings, interior of Building E, and some of the tenant spaces in Buildings F & G, access to which was not provided.

5.2 HAZARDOUS SUBSTANCES AND PETROLEUM PRODUCTS

5.2.1 Hazardous Substances and Petroleum Products (Identified Uses)

GCE's visual inspection revealed the presence of one (1) Above Ground Storage Tank of approximately 250-gallon was seen inside the tenant space of "Rainbow Transit" located on the northern portion of Building F in Parcel 4. No information is available about the usage and contents of this AST.

5.2.2 Hazardous Substances and Petroleum Products (Unidentified Uses)

According to the Sanborn Maps provided by EDR dated July 16, 2013, there is one (1) gasoline tank listed as "GT" present inside the central portion of the existing Building E of Parcel 3. No additional information is available for GCE's review. GCE did not get access to Building E during site inspection. According to Sanborn Maps, Building E was shown as "Auto Repair" from 1985-2006 maps. Furthermore, GCE's review of the 1948, 1950, 1967, 1977, 1979 and 1981 Sanborn Fire Insurance maps indicate the presence of one (1) gasoline tank listed as "GT" of unknown size located within the asphalt-paved land on the southeastern exterior portion of the property, in a close proximity to the east of Building E. GCE's visual inspection revealed the presence of one (1) fill port, near the steel plates, on the southeastern exterior portion of Building E in Parcel 3. The historical potential presence of the gasoline tanks and their usage may have environmentally impacted Parcel 3 in general and is considered as a *recognized environmental condition*.

GCE's visual inspection revealed the presence of one (1) suspect fill port on the western interior portion of Building F in Parcel 4. No additional information is available for GCE's review. This portion of the building is currently utilized by Exterior Wall Supply. According to Sanborn Maps, Building F was historically utilized for Lumber Shed/Carpenter Shops. The potential historical presence of USTs and their usage may have environmentally impacted Parcel 4 via USTs and is considered a *recognized environmental condition*.

In addition to the petroleum products stored in the storage tanks as described in section 5.2, GCE's visual inspection revealed the presence of several empty 55-gallon drums of soluble cutting oils located in Buildings B & C. No spills and/or leaks associated with these drums were observed. Historical usage of cutting oils during manufacturing of metal studs may have environmentally impacted the Site. This is considered to be a *recognized environmental condition*.

In addition, GCE's visual inspection revealed the presence of a paint booth and several 1-gallon paint containers located in the southern portion of Building D and several silica bags located in the central portion of Building D. Spills and/or leaks associated with silica bags were observed inside and surrounding the Buildings B, C and D. Therefore, silica bags may have environmentally impacted the Site. This is considered to be a *recognized environmental condition*.

Furthermore, GCE's visual inspection revealed the presence of several dumpsters located throughout the Site and truck inside the southern portion of Building B. No spills and/or leaks associated with these materials were observed. Therefore, these dumpsters and a truck are not likely to environmentally impact the Site.

In addition, GCE's visual inspection revealed the presence of several steel plates located inside Building B, and exterior of Building E. No further information regarding these steel plates were provided to GCE. No spills and/or leaks associated with these steel plates were observed. However, potential environmental impact associated with these steel plates could not be determined.

5.2.3 Unidentified Substance Containers

GCE did not observe evidence of unidentified substance containers at the Site.

5.3 WASTE GENERATION, STORAGE, AND DISPOSAL

GCE identified the following waste streams generated at the Site:

WASTE GENERATION, STORAGE, AND DISPOSAL			
Classification	Type of Waste / Generation Process	Type of Storage / Location	Disposal Method / Contractor
Non-regulated Solid Waste	General site operations	Dumpsters	Private Carting Companies
Regulated Solid Waste	None Identified	NA	NA
WASTE GENERATION, STORAGE, AND DISPOSAL			
Classification	Type of Waste / Generation Process	Type of Storage / Location	Disposal Method / Contractor
Non-regulated Liquid Waste	Sanitary Sewage / Storm Runoff	Municipal System	New York City Sewage System
Regulated Solid or Liquid Waste	None Identified	NA	NA
Biomedical Waste	None Identified	NA	NA

GCE's GCE's visual inspection revealed the presence of oil stains in Building C in the area of historic oil lines.

5.4 STORAGE TANKS

5.4.1 Existing Storage Tanks

GCE's visual inspection revealed the presence of one (1) Above Ground Storage Tank of approximately 250-gallon was seen inside the tenant space of "Rainbow Transit" located on the

northern portion of Building F in Parcel 4. No information is available about the usage and contents of this AST.

5.4.2 Former Storage Tanks

According to the Sanborn Maps provided by EDR dated July 16, 2013, there is one (1) gasoline tank listed as “GT” present inside the central portion of the existing Building E of Parcel 3. No additional information is available for GCE’s review. GCE did not get access to Building E during site inspection. According to Sanborn Maps, Building E was shown as “Auto Repair” from 1985-2006 maps. Furthermore, GCE’s review of the 1948, 1950, 1967, 1977, 1979 and 1981 Sanborn Fire Insurance maps indicate the presence of one (1) gasoline tank listed as “GT” of unknown size located within the asphalt-paved land on the southeastern exterior portion of the property, in a close proximity to the east of Building E. GCE’s visual inspection revealed the presence of one (1) fill port, near the steel plates, on the southeastern exterior portion of Building E in Parcel 3. The historical potential presence of the gasoline tanks and their usage may have environmentally impacted Parcel 3 in general and is considered as *recognized environmental condition*.

GCE’s visual inspection revealed the presence of one (1) suspect fill port on the western interior portion of Building F in Parcel 4. No additional information is available for GCE’s review. This portion of the building is currently utilized by Exterior Wall Supply. According to Sanborn Maps, Building F is historically utilized for Lumber Shed/Carpenter Shops. The historical potential presence of USTs and their usage may have environmentally impacted the Parcel 3 via USTs and is considered as *recognized environmental condition*.

5.5 OIL-CONTAINING EQUIPMENT AND POLYCHLORINATED BIPHENYLS (PCBS)

Polychlorinated Biphenyls (PCBs) are a chemical component of dielectric fluids, coolants, or lubricating oils used in many types of equipment manufactured prior to 1979. Other equipment that may potentially contain PCBs includes hydraulically operated equipment, such as elevators, compaction equipment or manufacturing equipment.

The manufacture and distribution in commerce of PCBs was banned for use in 1979 by the United States Congress, which enacted the *Toxic Substance and Control Act* (TSCA). The following oil-containing equipment was identified at the Site:

According to the Sanborn Maps provided by EDR dated July 16, 2013, the Parcels 1, 2 and 3 (Buildings A, B, C, D & E) were identified as “L Morton-Steam Stone” and “Cutting and Planing”, “Tisdale Lumber & Coal Yard”, “Geo. Brown & Co. Stream Stone Works”, “Weisberg Baer Co-Sash Door Factory”, “Marcheth Marble Co, Inc- Machine Shop”. Buildings A, B, C, D and E and the southern portion of the Site as developed with a historical one (1)-story manufacturing building and occupied by “Superior Steel Studs”. The 1985-2006 shows Building E as occupied with “Auto Repair” facility. PCBs may have environmentally impacted the Francis Lewis Property through historical usage of coolants/manufacturing equipment and is therefore considered to be a *recognized environmental condition*.

OIL-CONTAINING EQUIPMENT			
Classification	Type of Equipment	Year Installed / Location	Staining / Releases Identified
Transformers and Oil-Containing Electrical Equipment	Electrical Equipment identified	N/A	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A
Hydraulic Equipment	Manufacturing Equipment- Historical Usage	N/A	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A
Other Oil-containing Equipment	Historical Usage	N/A	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A

GCE's visual inspection did not reveal the presence of any automotive equipment/machines at the Site. However several wood cutting equipments, stucco manufacturing machines were seen during GCE's visual inspection.

GCE's visual inspection revealed presence of several settling tank torches (which may have been used in manufacturing metal studs) inside Building B.

GCE's visual inspection revealed the presence of oil stains on the floors in Building C associated with the historic use of machinery equipment. Poor housing was evident throughout the buildings B, C and D. GCE's visual inspection revealed the presence of leaked silica bags, paint buckets, empty 55-gallon drums, manufacturing supplies etc throughout and surrounding these buildings. The poor housekeeping practices with evidence of historic leaks associated with the machinery and the observed current condition of the Site is considered to be a *recognized environmental condition*.

5.6 ADDITIONAL SITE CONDITIONS

The following is a summary of visual and/or physical observations of the Site on the day of the site visit. Photographs of pertinent Site features are presented in Appendix A.

ADDITIONAL SITE CONDITIONS	
Condition	Identified
Interior Drains, Trenches, or Sumps	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Interior Stains or Corrosion	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Unusual Odors	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Interior Pools of Liquid	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Stained Soil or Pavement	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Indications of Inappropriate Solid Waste Disposal	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Exterior Pits, Ponds or Lagoons	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Wastewater or Storm Water Discharge/Disposal	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Oil-Water Separators or Clarifiers	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Septic Systems or Cesspools	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Wells (Drinking Water Wells, Monitoring Wells, Agricultural/Irrigation Wells, or Process Water Wells)	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
Petroleum or Natural Gas Pipelines/Easements	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No

6.0 INTERVIEWS

The following persons were interviewed to obtain information regarding recognized environmental conditions in connection with the Site:

INTERVIEWS			
Contact / Affiliation / Contact Information	Date of Interview	Years Associated with Site	Interview Summary
Mr. Christopher Giovanis	06/17/13	1	Mr. Christopher Giovanis is the site representative of the Property owner. Only limited amount of information has been provided to GCE.

7.0 CONDITIONS OUTSIDE THE SCOPE OF ASTM PRACTICE E 1527-05

The following sections address environmental issues or conditions at the Site that parties may wish to assess in connection with this industrial/manufacturing site that are outside the scope of ASTM Practice E 1527-05 (non-scope considerations).

7.1 ASBESTOS-CONTAINING MATERIAL (ACM)

Asbestos is a term used to describe a group of six naturally occurring crystalline fiber minerals. Asbestos has excellent thermal stability, a high degree of tensile strength, and has been used extensively in the textile, insulation, and building industries, particularly as a component in fireproofing, decorative coatings, insulation materials, and as reinforcement for plaster binders in building products. Asbestos-containing building materials are generally classified as friable or non-friable. Friable materials are those which can be crumbled, pulverized, or reduced to powder by hand pressure, or by normal use or maintenance can be expected to emit asbestos fibers into the air. Non-friable ACM is a potential concern if it is damaged by maintenance work, demolition, or other activities, at which time it may be considered friable.

GCE conducted a limited visual screening survey for the presence of Asbestos Containing Material (ACM) at the Site. GCE identified vinyl floor tiles in the areas of the office spaces located in Buildings F and G, piping insulation in Buildings A, B, C, F and G. These materials are suspect of containing ACM. These materials were observed to be undamaged and in good condition at the time of inspection. It should be noted that this survey was limited to visual observations of accessible areas and that the scope of work for this assessment did not include the collection and laboratory analysis of bulk samples of undamaged suspect ACM. Additional suspect ACM may be present in inaccessible areas, including, but not limited to, roofs, pipe chases behind solid walls and ceilings, concealed floor coverings and the interior of water and sewer systems. According to sanborn maps, aerial photographs and online building records, the current buildings on the Site were identified from at least 1931. With structures that were constructed prior to 1980, the presence of ACM is a possibility and the possible presence of ACM onsite is considered to be a *recognized environmental condition*.

7.2 LEAD-CONTAINING PAINT (LBP)

Lead-based paint (LBP), which is greater than 0.5% by weight of lead, was banned by the EPA through HUD for residential use. However, the term LBP is applicable only to residential applications, and does not apply to commercial construction applications. For construction purposes, any paint with detectable concentrations of lead is considered lead-containing. Lead-containing paint (LBP) is still readily available.

For construction work, OSHA provides the governing regulations (OSHA Lead in Construction Standard: 29 CFR 1926.62 for Lead), and OSHA does not specify allowable limits of lead in paint. Rather than set a limit on an allowable amount of lead in paint, OSHA sets limits on the concentration of lead in air that a worker can breathe during a normal workday.

GCE conducted a limited visual screening survey for the presence of *Lead Based Paint* (LBP) at the Site. GCE did not observe any LBP in the areas of the building walls of the Site. According

to the New York City Building Department Records, the Site was issued with a building certificate dated 1946. According to aerial photographs provided by EDR dated June 09, 2013, the current buildings on the Site was identified from 1954 through 2011 aerials. According to Sanborn Maps provided by EDR dated May 22, 2013, the current building on 32nd Road Property was identified from 1934 through 2006 and the building in Francis Lewis Property was identified from 1951 through 2006. With structures that were constructed prior to 1980, the presence of LBP is a possibility and the possible presence of LBP onsite is considered to be a *recognized environmental condition*.

7.3 WETLANDS

According to the 1980 U.S. Department of the Interior, Fish and Wildlife Service, National Wetlands Inventory Map for Central Park, New York – New Jersey Quadrangle, the nearest designated wetlands is Pot Cove, an inlet of the East River, located adjacent to the north-northwest of the Site which is designated as Estuarine, Subtidal, Open Water, Subtidal (E1OWL). According to the 1975 New York State Department of Environmental Conservation (DEC) Freshwater Wetlands Map for Central Park, Queens County, New York Quadrangle, “there are New York wetlands on this map within this county that are regulated under the Freshwater Wetlands Act.”

According to the New York National Wildlife Refuge Map, there are no Wildlife Management Areas and/or State Parks located at the Site. Since the Site is located in a developed industrial area, endangered species are not likely to be present at the Site.

According to the State Historic Preservation Office (SHPO), the Site is located in an Archeo-Sensitive Area and is not listed in the National or State Register of Historic Places.

7.4 RADON

According to the data obtained from the New York State Department of Health (DOH), the mean radon value recorded for the Borough of Queens was 3.4 pico-Curies per liter (pCi/l). A total of 443 basements were screened. The data was obtained from a strictly voluntary sampling program, that is, the data was not gained from a scientifically designed study. The mean value represents DOH finding as of March 2006. According to a US Environmental Protection Agency (EPA) guidance document entitled "A Citizen's Guide to Radon", August 1986, radon exposures in the range of 4.0 pCi/l "are considered average or slightly above average for residential structures."

8.0 FINDINGS AND OPINIONS

GCE has performed this Phase I Environmental Site Assessment of the Site in conformance with the scope and limitations of ASTM Standard E 1527-05. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this Report. This assessment has identified no evidence of *recognized environmental conditions (REC)* in connection with the Site except as described below, and the following *conditions outside the scope of ASTM Practice E 1527-05* were identified in connection with the Site:

- According to the Environmental Data Resources Report (EDR) dated July 16, 2013, Parcel 5 is included in “Underground Storage Tank (UST)” and “Historical Underground Storage Tank (HIST UST)” listings. The UST and HIST UST database listed the Parcel 5 property as “Superior Steel Studs Inc” under 4-57 26th Avenue, Astoria, New York. According to the New York State Department of Environmental Conservation (NYSDEC) Petroleum Bulk Storage (PBS) database Parcel 5 was listed as Superior Steel Studs Inc with PBS No. 2-305383, under 4-27 26th Avenue, Astoria, New York. No additional information is available for GCE’s review. According to UST & HIST UST database and NYSDEC PBS database, one (1) 4,000 gallon fuel oil UST was administratively closed at the property in 1996. No additional documentation was available for GCE’s review. The Parcel 5 property status listed under UST and HIST UST database is considered to be a *recognized environmental condition*.
- According to the Sanborn Maps provided by EDR dated July 16, 2013, there is one (1) gasoline tank listed as “GT” present inside the central portion of the existing Building E of Parcel 3. No additional information is available for GCE’s review. GCE did not get access to Building E during site inspection. According to Sanborn Maps, Building E was shown as “Auto Repair” from 1985-2006 maps. Furthermore, GCE’s review of the 1948, 1950, 1967, 1977, 1979 and 1981 Sanborn Fire Insurance maps indicate the presence of one (1) gasoline tank listed as “GT” of unknown size located within the asphalt-paved land on the southeastern exterior portion of the property, in a close proximity to the east of Building E. GCE’s visual inspection revealed the presence of one (1) fill port, near the steel plates, on the southeastern exterior portion of Building E in Parcel 3. The historical potential presence of the gasoline tanks and their usage may have environmentally impacted Parcel 3 in general and is considered as *recognized environmental condition*.
- GCE’s visual inspection revealed the presence of one (1) suspect fill port on the western interior portion of Building F in Parcel 4. No additional information is available for GCE’s review. This portion of the building is currently utilized by Exterior Wall Supply. According to Sanborn Maps, Building F is historically utilized for Lumber Shed/Carpenter Shops. The historical potential presence of USTs and their usage may have environmentally impacted the Parcel 4 via USTs and is considered as a *recognized environmental condition*.
- GCE’s visual inspection revealed the presence of one (1) Above Ground Storage Tank of approximately 250-gallon, seen inside the tenant space of “Rainbow Transit” located on the northern portion of Building F in Parcel 4. GCE’s visual inspection also revealed the presence of a machine/service shop for service of buses inside the building. Historical usage of service areas associated with the “Rainbow Transit” along with the AST may have environmentally impacted the Parcel 4 in general. This is considered to be a *recognized environmental condition*.
- According to the Sanborn Maps provided by EDR on July 16, 2013, Parcel 4 Buildings F & G were identified as historical two (2)-story unidentified houses in 1898. The Building G is occupied with a “Planing Mill” and Building F was occupied with “Lumber/carpenter Sheds” in 1915-1950. Buildings G & F were shown as occupied with wood working and machine shops. From 1967-1979. Wood working and Machine Shops were also shown from 1981-

2006. Parcel 4 was listed as “Weisberg Baer Co sash trim” from 1934 to 1945, “Willys Plate Graining Corp”, “Spaeth Displays Inc”, “Intercoastal Door Corp”, “Goldmark Plastic Compounds Inc” and “Century Laminated Prods Corp” in 1962, “Svce & Parts”, “Royal Rose Range Co Inc”, “Main Office”, “Automatic Range Co Inc” in 1967 and 1970, “Federal Enterprises” in 1983, “Easyride Administration” and “Child Welfare Association” in 1991, “Retrospektiv”, “Pstv Inflnc Fshns” and “Astron Iron Works” in 2000, “The Shop Inc”, “Nova Star Electric Corp”, “Floman Enterprises Inc”, “Dalston NY Inc” and “Black Bull Corp” in 2007 and “ Viv Contracting Corp”, “Pancyprian Association Inc”, “Envee Construction Inc”, “Compsec Electric Corp”, “Basset Inc”, “B S Mechanical Contracting” and “Bay Contracting Corp” in 2012. According to the New York City Building, Buildings F & G in Parcel 4 were constructed in c 1931. Taken together, these uses are considered to be a *recognized environmental condition*.

- GCE’s visual inspection revealed the presence of two (2) air stacks protruding from Building G which suggests wood manufacturing process was historically performed. In general, the main components generated from lumber and wood industry includes spent solvent based adhesives, spent acetone, ammonia, spent bleaching agents, pigment wastes, boiler ash, dripped formulation mixed with rainwater and facility washdown water, kiln condensate, contact cooling water from surface protection and wood preserving processes etc. Historical property usages as “Wood Working” and “Lumber Storage/Planing Mill” may have environmentally impacted the Parcel 4 in general and are thus considered to be a *recognized environmental condition*.
- According to the Sanborn Maps provided by EDR dated July 16, 2013, the Parcels 1, 2 and 3 (Buildings A, B, C, D & E) were identified as follows: Building A was occupied by “L Morton-Steam Stone” and “cutting and planing”; Building B was occupied by “Tisdale Lumber & Coal Yard” in 1898; a small dwelling and auto shop on the southern portion of Building A and Building B was occupied by “Geo. Brown & Co. Stream Stone Works” and developed with a historical one (1)-story cutting shed building; a historical one (1)-story stable, the existing Building B utilized for cutting and planing and office purposes in 1915; Building A was occupied by “Weisberg Baer Co-Sash Door Factory” and lumber shop; Building B as occupied by “Marcheth Marble Co, Inc- Machine Shop”; and in 1936 occupied by an unknown dwelling.
- Buildings C & D were occupied by “Tisdale Lumber & Coal Yard” and developed with a historical two (2)-story building labeled “coal pockets” with an associated coal yard, a historical one (1)-story building utilized for the storage of shingles, several historical one (1) and two (2)-story lumber sheds and the remainder of the Site was utilized for the storage of lumber piles. the northern and eastern portions of the Site as occupied by Morey Machinery Co. Inc. and developed with the existing Buildings A, B, C, D and E, utilized for machinery and resembling purposes in 1948-1979. Buildings A, B, C, D and E and the southern portion of the Site as developed with a historical one (1)-story manufacturing building and occupied by “Superior Steel Studs”. Taken together, these uses are considered to be a *recognized environmental condition*.
- The 1985-2006 Sanborn shows Building E as occupied with “Auto Repair” facility. According to the New York City Building, Buildings A, B, C, D and E in Parcel 4 were

constructed between c 1931 to 1943. The main contaminants generated from the metal manufacturing facilities include cutting oils, degreasing and cleaning solvents, acids, alkalis and heavy metals from metal cutting/forming process, solvents, emulsifying agents, acids and alkalis from surface preparation, acids, metals, solvents and paints from surface finishing process. Handling of chemicals from auto/service facilities may generate environmental pollution through activities associated with usual service work such as: the replacement of auto parts, oil changes, tune-ups and even through regular change of fluids (e.g., PCB's, oil, transmission fluid). These repair/service activities introduce or have the potential to introduce contaminants (handled chemicals) in the environment through accidental spills or leaks, as well as through volatilization of the auto repair solvents during regular handling activities. Historical property usages as "Superior Steel Studs", "Machine Shop", "Auto Repair" and "Coal Yard/Door Factory" may have environmentally impacted the Parcel 4 in general and are thus considered to be a *recognized environmental condition*.

- Polychlorinated Biphenyls (PCBs) are a chemical component of dielectric fluids, coolants, or lubricating oils used in many types of equipment manufactured prior to 1979. Other equipment that may potentially contain PCBs includes hydraulically operated equipment, such as elevators, compaction equipment or manufacturing equipment. PCBs may have environmentally impacted the Site through historical usage of coolants/manufacturing equipment and is in consequence considered to be a *recognized environmental condition*.
- According to the Sanborn Maps provided by EDR on July 16, 2013, Parcel 5 is used for storage of "Superior Studs Inc" and "Energex Wall Systems" manufacturing supplies. Parcel 6 is occupied for storage purposes. The 1948 sanborn map indicates that the adjacent property, to the eastern side of Parcel 6 property is occupied with "Metal Container Mfg". GCE's visual inspection revealed the presence of storage of manufacturing supplies on Parcel 5. Historical property usages as storage of manufacturing supplies may have environmentally impacted the Parcels 5 and 6 in general and are thus considered to be a *recognized environmental condition*.
- GCE's visual inspection revealed the presence of oil lines in Building C of Parcel 3. Historic USTs may have been present associated with the manufacturing process may have impacted Parcel 3 in general. This is considered to be a *recognized environmental condition*.
- According to the prior Phase I report performed by GCE dated 2006, there is one (1) 5,000 gallon heating oil UST installed at the Site in 1942 (Building Department Records) and was abandoned c 2000. Also according to prior Phase I report, the fill port associated with this abandoned UST was historically located within the asphalt paved land adjacent to the Building C in Parcel 2. GCE's visual inspection did not reveal the presence of any fill port associated with this tank was observed. No additional information is available for GCE's review. Historical potential presence of this UST and its usage may have environmentally impacted the property in general. This is considered to be a *recognized environmental condition*.
- GCE's visual inspection revealed the presence of two (2) catch basins/drywells on the northern exterior portion of Parcel 4. GCE's visual inspection revealed that these drains are

covered with closed manhole covers. No additional information is available for GCE's review. Historical usage of Parcel 4 as "Lumber/Wood working", "Rainbow Transit" and "Machine Shops" may have environmentally impacted the property via these catch basins/drywells. This is considered to be a *recognized environmental condition*.

- GCE's visual inspection revealed the presence of suspect floor drains in Building F & G. Historical usage of Parcel 4 as "Lumber/Wood working", "Rainbow Transit" and "Machine Shops" may have environmentally impacted the property via these floor drains. This is considered to be a *recognized environmental condition*.
- GCE's visual inspection revealed the presence of oil stains on the floors in Building C associated with the historic use of machinery equipment. Poor housing was evident throughout the buildings B, C and D. GCE's visual inspection revealed the presence of leaked silica bags, paint buckets, empty 55-gallon drums, manufacturing supplies etc throughout and surrounding these buildings. The poor housekeeping practices with evidence of historic leaks associated with the machinery and the observed current condition of the Site is considered to be a *recognized environmental condition*.
- GCE conducted a limited visual screening survey for the presence of Asbestos Containing Material (ACM) at the Site. GCE identified vinyl floor tiles in the areas of the office spaces located in Buildings F and G, piping insulation in Buildings A, B, C, F and G. These materials are suspect of containing ACM. These materials were observed to be undamaged and in good condition at the time of inspection. It should be noted that this survey was limited to visual observations of accessible areas and that the scope of work for this assessment did not include the collection and laboratory analysis of bulk samples of undamaged suspect ACM. Additional suspect ACM may be present in inaccessible areas, including, but not limited to, roofs, pipe chases behind solid walls and ceilings, concealed floor coverings and the interior of water and sewer systems. According to Sanborn maps, aerial photographs and online building records, the current buildings on the Site were identified from at least 1931. With structures that were constructed prior to 1980, the presence of ACM is a possibility and the possible presence of ACM onsite is considered to be a *recognized environmental condition*.
- GCE conducted a limited visual screening survey for the presence of *Lead Based Paint* (LBP) at the Site. GCE observed white paint in good condition located in the office spaces in the on-site buildings. According to sanborn maps, aerial photographs and online building records, the current buildings on the Site were identified from at least 1931. With structures that were constructed prior to 1980, the presence of LBP is a possibility and the possible presence of LBP onsite is considered to be a *recognized environmental condition*.

9.0 RECOMMENDATIONS

GCE recommends the following based on the above *recognized environmental condition (REC)* findings for the Site:

A limited Phase II Environmental Site Assessment should be performed at the Site as follows:

- A geophysical survey should be performed throughout the Site, which includes the areas of suspected and historical UST locations to identify the presence of any USTs present at the Site.
- Subsurface investigations should be performed throughout the Site, which includes potential historic/present UST areas, storm drain areas, suspect floor drain areas, all Buildings, vacant lot areas, parking areas and in general areas where historical Site usage as manufacturing metal/machine shops, lumber/wood working/assembling, auto repair shop, etc may have environmentally impacted the Site.
- Soil Vapor testing should be performed at Building E, proximate to former auto repair facilities, to test for presence of chlorinated hydrocarbon solvents in subsurface soils, related to auto repair and auto body work.
- ACM and LBP are conditions outside the scope of ASTM E 1527-05 and a survey should be conducted at the Site to investigate these conditions.

The results of GCE's review of any outstanding information may or may not result in changes in the Findings, Conclusions or Opinions of this report.

Since soil or groundwater testing was not performed as part of this assessment, GCE makes no **direct representation of soil or groundwater quality conditions.**

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

PCB TRANSFORMER..... PCB Transformer Registration Database
US FIN ASSUR..... Financial Assurance Information
EPA WATCH LIST..... EPA WATCH LIST
COAL ASH DOE..... Steam-Electric Plant Operation Data

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 02/12/2013 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

<i>BLACK OX METAL FINISHING INC</i>	<i>27TH AVE</i>	<i>W 1/8 - 1/4 (0.195 mi.)</i>	<i>K48</i>	<i>101</i>

State and tribal leaking storage tank lists

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 05/21/2013 has revealed that there are 13 LTANKS sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/12/2013 has revealed that there are 9 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there are 2 EDR MGP sites within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

CON EDISON - EAST 108TH ST. ST	108TH ST. WEST OF FIRST	NNW 1/2 - 1 (0.963 mi.)	87	181

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station,

EXECUTIVE SUMMARY

service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 9 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

EDR US Hist Cleaners: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Cleaners list, as provided by EDR, has revealed that there are 9 EDR US Hist Cleaners sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

 DEC Region: 2
 DER Facility ID: 209232
 DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "SANGESLAND"2/6/03 - TTF LETTER SENT TO BRIDGEWATER II CO.11/21/05 - L. Alden - Called ProTest for information, talked to Jim. After initial test failure of 2/5/03, ProTest tested again on 5/9/03 and tank failed again. ProTest subbed the job to Yellowstone (now out of business.) ProTest retested again on 6/11/03 and tank passed. No information on what investigation or cleanup was done between tests. Suggested action: Site visit.11/16/06 - Austin - Reassigned to Ketani for followup/review - end12/1/06 - Raphael Ketani. I contacted Bob Urban at ProTest (631) 321-4670. I asked him for a copy of the passing tank test and any records of a cleanup. He said he will get back to me. I have the owners listed as Bridgeview II, LLC, 3840 Nostrand Avenue, Brklyn., 11235-2013. Block/lot 00903/0007. This information was from the NYC Property Tax database. Strangely, there were no listings in the White Pages phone books. The PBS case#2-061921 shows a 10,000 gal. tank that is in service since 2/1/72 with #2 oil.12/5/06 - Raphael Ketani. I called up Mr. Urban and asked whether he had found any information regarding the passing tank test and any cleanup. He said that he found the passing tank test report and will FAX it to me.He FAXed the passing tank test

U000394379

report. He had no other information to give me and didn't have any information as to whether any oil was released anywhere. 12/8/06 - Raphael Ketani. I made an unannounced site visit and met Mark, the super. He showed me the boiler room and the area where the tank is buried. The boiler room was free of oil. The burial area for the tank is a small private park for sitting that is owned by the building. There were no signs of oil staining on the ground. I checked the alleyway between the tank and the building. The alleyway wall from next to the tank to all the way up to the street where there is a gate by the playground was clean. However, the wall of the alleyway next to the playground and the sidewalk suggest that the fill line had been dug up at one time. The concrete work looked fairly recent. I took 6 pictures total of the tank area and the fill line area. 12/11/06 - Raphael Ketani. I called Mr. Urban of ProTest to find out if he had an information about the fill line repair. He said that ProTest did not. He suggested that Yellowstone may have done the line replacement. Based upon the lack of evidence of an oil leak, the passing tank test results, my observations during the site visit, and the inability to contact Yellowstone as they are out of business, I am closing the spill case.

DEC Memo: 12/21/07 - Raphael Ketani. I spoke to Nick Canonico of NOVA Consulting ((718) 343-4440/(516) 352-3233). He said he was working for a potential buyer of the property. Mr. Canonico told me that the site is a vacant commercial building. He did both a Phase I and a Phase II. The soil contamination was at or below TAGM, but the groundwater was above TAGM. The contaminants in the soil are not the same as the contaminants in the groundwater. Industrial areas are to the immediate south (far south there are apartment buildings), to the north and to the east. The area is residential to the west. Groundwater flows to the north. The source of the groundwater contamination is unknown. He does not know who called in the spill. His client has not made a decision as to whether to buy the property. There is no PBS case for the site. 12/26/07 - Raphael Ketani. I spoke to Mr. Canonico again. He will send me the owner's name and address and her lawyer's name, address, and phone number. The site location is block/lot 909/17. There were two owners listed for the deed, Isaac Silberstein and Shia Ostreicher. Mr. Silberstein is at 170 Ross Street, Brooklyn, 11211. Ms. Ostreicher is at 205 Keap Street, Brooklyn, 11211. I sent a CSL to both parties. Mr. Canonico called me back. He said the lawyer for the owner is Harry Freifeld (718) 338-1971. 3/6/08 - Raphael Ketani. Kris Almskog of P.W. Grosser (631) 589-6353 called to say that he represents the owner of the property. He said he has the NOVA consulting investigation reports and will send them to DEC. Mr. Almskog added that there is 200 ppb of PERC in the groundwater, and some other volatiles. The contamination will be addressed. I suggested that maybe an initial solution is to collect the groundwater with a guzzler and then resample the groundwater two weeks or so later. 3/7/08 - Raphael Ketani. Today I received the February 2006 PWGC SIR and the November 2007 NOVA Phase II ESA report. The 2006 SIR had soil analytical results which showed no VOC hits, but relatively high SVOC hits for SB-02, and low SVOC hits for SB-01. There were no groundwater VOC or SVOC hits. The 2007 Phase II ESA had analytical results from 11/2/07 for sediment, soil, and groundwater. There were only four scattered low level soil VOC hits. SVOC hits were concentrated in S-1, B-1, and B-3, and gave the appearance of historical fill. All five groundwater samples had hits of trichloroethene, and samples W-2, W-4, and W-5 had hits of 1,1-dichloroethane, and o,1,2-dichloroethene. There were several other scattered VOC hits amongst the samples. 2/11/08 - Raphael Ketani. Mr. Almskog called and said that he believes it's worth a try to vacuum up the contaminated groundwater, wait at least 2 weeks and sample it again. He will discuss the idea with his client. 3/27/08 - Raphael Ketani. Mr. Almskog called. He said that he was passing his case to John Eichler (631) 589-6353. Mr. Almskog set up a conference call between us. He said that P.W. Grosser looked for the wells that NOVA Consulting had installed, but didn't find any. So they took a geoprobe and did groundwater sampling at 4 locations through the geoprobe screen. Before sampling they purged 3 to 5 volumes. Mr. Almskog said that he was sure there was no cross contamination. He sent me the Groundwater Investigation report dated 3/27/08 by e-mail. I reviewed the report. The analytical results for the groundwater samples taken from the 2008 group of wells, MW-1 to MW-4, were completely non-detect, except for a laboratory cleaning chemical. According to the November 2007 NOVA Consulting report, trichloroethene was discovered in the soil sample from B-3 and in the

Remarks: groundwater sample from from W-2. These are two locations that are in the boiler room. The chemical may have been spilled in the past during the cleaning of parts for the boiler. This may explain why trichloroethene is present at B-3 and is highest in concentration in the water at W-2. I did not find any analyte concentrations that would preclude closure of the case. Based upon the analytical results in the P.W. Grosser 2/2006 SIR, the NOVA Consulting 11/2007 Phase II ESA, and the P.W. Grosser 3/27/08 Groundwater Investigation report, I am closing the spill case.

PHASE WAS DOWN AND SHOWED CONTAMINATION ; TEST DONE BY NOVA CONSULTING AND ENGINEERING #516-352-3233; NICHOLAS CANONICO WAS HEAD GUY AT THE SITE;

DEC Memo: 06/27/11-Vought-Secondday off hours repsonder. Responded to site on 6/24 as per DEC Austin. See also closed spill numbers 9812310 and 0812895 and PBS #2-061964 at same site. Vought also updated spill amount to approximately 400 gallons from the originally reported 1000-gallons based on filed observations. Chronological site history follows:6/24/11-Vought-Spoke to USCG Heather Clarke (Ph:347-582-8257 email:heather.l.clarke@uscg.mil) in route to site regarding possible impact to east river and she will be repsonding and Vought to provide her update once on site. Responded to Site and arrived on-scene at approximately 4pm. On-scene was: FDNY, FDNY Hazmat,NYCOEM (Mr. Conversano Ph:646-596-3097), NYCDOS, DEP Hazmat (Mohammed Abdel), DEP Industrial Waste (Andrew Kelley), Con Edison, NY1 News, Statewide Oil(Jose Martinez Ph:646-523-9130 and Mike Savino msavino@statewideoil.com), Hess Oil (Ray Soijka Ph:908-803-9863) Riteway Tank Maintenance and Allied Properties (Kathy Pappas Cell:347-613-0478 and Bella Ph:347-875-5601). Upon arrival Vought examined impact to East River (at end of 9th Street) and noted sheening in river (approximately 10'x10') with an overland flow source of oil down the embankment. No recoverable product noted however spill also located in Hells Gate section of river which is noted to have fast currents. Vought called RSE and USCG Clarke and informed them of presence and size of sheen in river. Spill caused by overflow of #2 fuel oil to 12,000-gallon UST adjacent to building and spill came out most probably from stick port, pooled on top of UST pad, and ran down gravel and soil embankment, flowed over emankment wall, across sidewalk, over the adjacent grass and concrete driveway at 26-26 9th Street, down the curb, across a Con Ed vault, and pooled at the low end of 9th Street in grass and weeds at end of street and then seeped into East River. Vought spoke with on-site super (Mark) who noted that he manually stuck UST on 6/23 and determined there was 1500-gallons of fuel in the tank and then called Axiom Management who

WARDELL APARTMENTS (Continued)

S111065204

placed an order of 6,000-gallons. The spill occurred when approximately 4400 gallons was delivered (as per Statewide Oil) and oil was observed flowing over the concrete embankment onto 9th Street. No spill observed out of vent pipe but pooled product noted ontop of tank pad by stick port and manway. Mark and Statewide noted recent repairs on UST system in past two months. The site is located on a steep hill and the UST is in soil right at level with the upper second story of a three story residential apartment located at 26-26 9th Street. Heavy soil contamination possibly exists immediately against the first and second floors of 26-26th 9th Street. FDNY and DEC performed site inspection of 26-26 9th Street and noted no petroleum vapors or seepage. Vought provided cell phone number and Spills Hotline number in case if odors arise or others issues to basement resident (Scott Levine Ph:917-771-8957) and third floor resident (Lyubomir Ph:646-239-5355). Vought required the mobilization of enough tank trucks to accomodate the 12,000-gallons of the tank (and hence emptying of the tank) in case the overfill caused the tank to rupture. Statewide requested the removal of approximately 5000-gallons of oil from the tank which would enable enough headspace for the driver to disconnect the fill line from the truck which is lower than the tank so that oil could be "blown back" into the UST instead of additional sidewalk and curb spillage and Vought approved. Statewide then also requested that in lieu of total recovery of 12000-gallons that the oil level be watched in the UST for a time period and if it continued to decrease it would then be recovered in total. Oil was pumped down to 82" via stick port measurement and decreased to 79" in about forty five minutes and therefore it was determined by all parties that all 12,000-gallons were to be emptied from UST which was completed at approximately 9:30pm. Vought observed free product pouring back through cinderblock into UST manway suggeseting heavy soil contamination around manway and possibly against wall of 26-26 9th Street. No spill noted inside Site as well. Kens Marine also arrived on-site and placed double boom at end of 9th Street as per instructions from USCG Clarke. Vought also spoke to Associated Environmental (Greg Ernst Ph:516-815-5151), hired by Axiom Management and updated him on site. RSE also arrived on-site as well. DEC required that soil impact area be covered with plastic and contractors to begin soil excavation on 6/27. Site management company (Kathy Pappas) noted that repairs on UST including tightness test was recently performed by ABC Tank (Christopher Quintana Ph:347-397-8298). DEC required: 1)that a structural engineer must be onsite to supervise the excavatio due to proximity to retaining wall and foundation wall of 26-26 9th Street 2)cancellation of all further deliveries.6/25/11-Vought-Site visit by Vought to inspect status of boom and site. Sheen only contained by boom and no recoverable product. Vought met onsite with EnviroTrac (David Lorthior Ph:631-872-0231) who was hired by Hess to oversee investigation and cleanup. Vought inspected site with David Lorthior and informed him of spill history and meeting scheduled for 6/27 at 10am.6/26/11-Vought-Received call from Pappas of building evacuation due to "gas" odors. Vought informed RSE and responded to Site and FDNY and FDNY Hazmat on-scene and Vought noted that complaint as per FDNY was pepper spray and not petroleum. Building reoccupied after ventilation of pepper spray fumes in lobby. Vought informed RSE of same.6/27-Vought-Meeting onsite with property owner Allied Properties (Tim Ziss Ph:347-875-5602 and Kathy Pappas), Statewide Oil(Savino and Martinez), Hess (Soijka), Associated (Ernst), ABC Tank (Quintanna),

WARDELL APARTMENTS (Continued)

S111065204

Riteway (Anthony Lara) and DEC Vought and Ajoku. DEC Ajoku performed site inspection and noted possible violations including lack of overfill prevention equipment and working petrometer. Vought inspected East River and only contained sheen noted within boom. Agreement reached that investigation and remediation to be performed by Allied Properties via Associated Environmental. ABC tank noted that UST was repaired in late May 2011 including repairs made to manway, replacement of suction and return lines and performance of a full system test (which passed) on 6/2. Repairs initially being performed on UST as part of seeking refinancing and a request by a bank. Agreement reached during meeting that spill amount was approximately 400-gallons of #2 fuel oil. UST will be tightness tested today however Vought noted that despite UST fitness it may still have to be removed to facilitate investigation and remediation due to the possible proximity of free product next to the first and second story residential apartments of 26-26 9th Street. (Site and UST in hill that is topographically above adjacent residence at 26-26 9th Street. Vought received email from Allied (Bella Poulos) that tenant in apt #216 (Dorothy Martinez) was claiming petroleum smell was making her "dizzy" and requested to move to vacant unit. Vought called and spoke to Bella and requested that they visit her apartment for olfactory inspection, ask Associated to take PID reading and relocate her if possible with note that NYCDOH can be called if situation cannot be rectified. Vought received later email from Cathy Pappas that a site visit was performed and the woman had her window "open a crack" and her air conditioning running. Window was closed and Associated to still perform inspection via PID. 6/28/11-Vought-Vought spoke to Associated (Ernst) who noted that UST passed tightness test but had "minor pinhole leak" however Vought noted that it may still have to be removed to facilitate investigation and remediation due to the possible proximity of free product next to the first and second story residential apartments of 26-26 9th Street. Greg also indicated that they would be removing concrete slab today around UST manway and Vought repeated request for site visit to Apt 216 with a PID. Vought sent email of same to all parties that spill transferred from Vought to Patel as per RSE and that UST may have to be removed to facilitate investigation and/or remediation despite passing tightness test. DEC possibly requires:1)delineation of soil and groundwater (if applicable) contamination of soil at both site and 26-26 9th Street driveway. (Note that full vertical delineation required due to proximity to residence at 26-26 9th Street and seepage out of BASE of retaining wall as per stains and observations by Statewide Oil).2)drum recovery3)collection of endpoint soil samples4)PBS tightness testing and inspection and repair and submission of all tests results to date.5)maintenance and replacement of boom in East River at end of 9th Street.6)CAMP due to proximity of soil excavation to building7)structural engineer to oversee possible excavation adjacent to building and retaining wall.8)Results of PID survey of Apt 216 at site due to vapor complaint.9)Meeting with DEC Urda, RSE and DEC Ajoku to discuss PBS violations and possible NOV.06/28/11-Hiralkumar Patel.2:00 PM:- visited site. met Tim, Greg and Dave. owner hired private contractor to break concrete on top of tank. Greg is monitoring the site. Greg checked the apartment 216 at 1:30 PM and found 0.5-0.8 ppm on PID. Greg was told that tenant of apartment 216 will be moved to another apartment temporarily by the management.inspected work area. odors found in close proximity to tank area, but not in on-site building

(in laundry room) or on street. inspected manhole area. no oil found in manhole. Greg mentioned that some oil found in manhole yesterday. after they broke concrete on top, they found hollow space around the manhole brick pit. contamination soil observed around the pit. Greg mentioned that they will finish exposing tank today. ABC tank performed a system test yesterday and found failed. after that, ABC tank dug a small pit where a coupling on fill line to make sure that coupling is not the source of leak. at that time, they found a tell-tale line (a remote vent line to fill port area) running along the fill line. ABC found the end of tell-tale line capped at the fill port area. ABC tank performed a testing of tell-tale line and confirmed no leak from it. after performing the test, ABC tank cut the tell-tale line and capped by the coupling area on fill line. once the tank top is exposed, ABC tank will performed an isolation test tomorrow. during inspection, found that fill port was not sealed as needed for isolation test. asked Tim to secure the fill port to prevent any misdelivery. asked Tim/Greg to investigate/clean any contamination on adjacent properties. inspected river. no sheen found in water. Ken's Marine was on-site changing booms. Greg mentioned that the tank is 8 ft in diameter and 31 ft long. 6/28/11-Vought-Secondary off-hours responder. Received call from Kathy Pappas during off-hours with note that tenant in Apt 216, Dorothy Martinez, was being temporarily relocated to another apartment and was also requesting to go to the hospital "for a few days". Pappas noted no odors in Apartment as she was on-site currently with Ms. Martinez. Ms. Martinez noted no current symptoms of petroleum exposure as per Pappas (eg headache, nausea, dizziness). Vought encouraged location to another apartment as soon as possible, also noted the .8ppb reading taken earlier (less than 5ppm limit as per NYCDOH), and noted that if she was not satisfied, DEC would consider contacting NYCDOH for a confirmatory site visit (via the same meter being a PID). Vought also asked Pappas to have Associated do another PID survey of Apt 216 on 6/29/11. Pappas also noted that Ms Martinez lived with both sister and daughter who were also there and could call an ambulance if needed. Vought requested to be contacted immediately if ambulance was called. Vought called RSE and informed him of same. 06/29/11-Hiralkumar Patel. alternate addresses: 8-01 to 8-15 27th Ave, 26-32 to 26-50 9th street. PBS #: 2-061964. as per PBS record, the site has one 12,000 gal #2 oil UST installed in Apr. 1970. other spills #: 9812310, 0812895. spill # 9812310 was reported on 01/05/1999 due to about 20 gal spilled in back concrete yard (probably from vent line). case closed. spill # 0812895 was reported on 02/27/2009 due to about 30 gal spilled from vent line during delivery. case closed. Chris mentioned in 25 minutes, system lost 3/10th of pound pressure (1.739 pound at beginning and 1.709 pound at end). he heard very low noise. he mentioned that ABC has not been hired for isolation test. he will talk to property manager and will call back. informed him that the department requires isolation test of each part. also discuss about the pit dug during system test on 06/27/11. Chris mentioned that they dug area on tank top to expose the fill port/tell-tale connection to the tank. he performed a system test with and without tell-tale line and result was same both time. he did not performed isolation test of the tell-tale line. informed Chris that tell-tale line must be tested during isolation test. 1:55 PM:- visited site. met Greg. inspected excavation area. crew has exposed the tank top. at the front end of the tank towards the street, found fill line and tell-tale line. tell-tale line was capped at tank end. fill/tell-tale lines from tank top runs towards the adjacent building foundation wall and then runs vertically down along the wall. found heavy contamination in area along the front end. Greg mentioned that concrete pad on tank top had ended right at the tank end area and then there was couple of inches drop. he suspects that oil might have pooled at the end of the concrete pad and seeped into ground along the tank end. found crack and some holes in adjacent building wall. this crack in wall is right after the adjacent building ends (see pics on e-docs). found electronic gauge line, supply line, return line and vent/stick line at the back end of the tank. vent and stick lines are connected right before entering into the tank. contamination found all around tank. crew will continue excavation, but only upto some limit as tank may roll over. asked Greg to cover and secure the excavation area over the weekend. 07/05/11-Hiralkumar Patel. 11:04 AM:-

MAP FINDINGS

WARDELL APARTMENTS (Continued)

S111065204

spoke with Greg. they continued excavation this morning. he found clean soil (below 10 ppm on PID) in area along the two sides of the tank, area at the tank end in back (by supply/return/vent/stick lines) and slope in front towards the street. he dug to the tank invert depth right by the tank end in frong (fill/tell-tale line) and still some contamination in area, but could not dig more. he has collected endpoint samples from all areas and will send to lab tomorrow. they will cover the excavation until gets the lab results. 11:12 AM:- left message for Tim. 07/06/11-Hiralkumar Patel. 1:22 PM:- received call from Pat from Ken's Marine inquiring what needs to be done about booms in water. asked him to contact Dave. PatKen's Marine Ph. (201) 339-0673 email: pat@kensmarine.net 1:26 PM:- spoke with Dave. he checked booms on 07/01/11 and found no product by booms or any discoloration in booms. he will check booms again tomorrow and will call Ken's Marine with updates. 07/13/11-Hiralkumar Patel. 9:12 AM:- received email from Dave with pic. they inspected boom. no more oil came out even after major rain/storm event. Dave requested to remove the boom. discussed with DEC Austin about boom removal. he asked to check with coast guard also. 4:38 PM:- sent email to Dave and asked him to consult with coast guard prior to removing boom. 07/14/11-Hiralkumar Patel. received call from Heather Clarke from Coast Guard. they will inspect the area today. Heather Clarke Ph. (347)

582-8257 email: heather.l.clarke@uscg.mil 07/19/11-Hiralkumar Patel. 11:44 AM:- spoke with Greg. they received endpoint sample results and found contamination in soil samples at the front end of tank and along the foundation wall of adjoining building. they are planning to resume excavation on 07/21/11. asked Greg to submit lab results today for review. 2:14 PM:- spoke with Greg. he mentioned that due to payment issue, they will not release the lab results. 2:15 PM:- spoke with Tim and asked him to submit lab results and site map (including endpoint sample locations) by end of today. 2:20 PM:- sent email to Tim requiring to submit lab results and site map by 4 PM today. email copied to Cathy, Greg and Dave. 07/20/11-Hiralkumar Patel. 3:27 PM:- received call from John from Associated environmental. 07/21/11-Hiralkumar Patel. 10:04 AM:- spoke with Greg. he is currently preparing report which will be submitted by tomorrow. asked Greg to submit lab result summary table and a site map with sample locations, for review. Greg mentioned that they are not doing any excavation today. 3:31 PM:- received call from Drew Pardus from Pardus Environmental, company working for property owner's attorney. informed Mr. Pardus about case history and current status. Drew Pardus Pardus Environmental Consulting Ph. (646) 577-8280 email: dpardus@tmo.blackberry.net 4:31 PM:- received email from Greg including sample results. found heavy contamination in samples EP-3 and EP-6. both samples were collected at 8 ft below surface. soil analyticals:

-----EP-3-----EP-6 Toluene-----
-----2,400-----2,400 Ethylbenzene-----5,
900-----3,900 Xylene-----76,000-----82,
0001,2,4-Trimethylbenzene-----110,000-----110,0001,3,
5-Trimethylbenzene-----30,000-----33,
000 Naphthalene-----50,000-----28,
000 n-Butylbenzene-----16,
000 n-Propylbenzene-----7,800-----3,400

document indicate that no sample was collected from area in front of tank end towards the street where heavy contamination observed at excavation

bottom.07/22/11-Hiralkumar Patel.11:42 AM:- spoke with Greg regarding sampling results and reason for not collecting any soil sample from area right under the front end of the tank where heavy contamination exists. Greg mentioned that PID readings in area in front of tank end was same as in EP-3 and EP-6. so to reduce cost, they did not collect sample from tank end area. he mentioned that a structural engineer has inspected the site and they could excavate another 4-5 ft in area of EP-6. in area of EP-3, they could dig (by hand only) for another 2 ft before they need to shore the tank. discussed about soil delineation prior to further excavation. Greg mentioned that in the area of EP-6, they have to backfill for geoprobe. as it could be waste of time, agreed with Greg's plan for further excavation in area of EP-6. Greg doesn't know anything about future use of tank.12:42 PM:- spoke with Tim and inquired him about future use of tank. Tim mentioned that the cleanup is not covered by building's insurance company and oil companies (Hess and Statewide) denies responsibility. so he has to do cleanup and he has no money to install new tank system and gas line. so he is planning to use the existing tank. informed him that the department requires complete delineation and remediation of soil (and possibly groundwater) contamination. he asked to talk to Greg for cleanup work. informed Tim that the isolation test of the entire tank system must be performed to identify the leak area. he will talk to tank testing company and will schedule a test.during conversation, he mentioned that super opened doors for truck driver (as he came to building first time) and he left to finish his other tasks. so during delivery, only the truck driver was there. he also mentioned that as per one of his tenant, the truck driver was sitting inside the truck during oil delivery and was not at the fill port.1:35 PM:- sent email to Michael at Statewide and asked him to submit copy of delivery record (including delivery tickets) from Aug. 2010 to Aug. 2011, by the end of 07/25/11. email copied to Tim, Cathy and Ray (Hess).1:49 PM:- sent email to Tim requiring to submit schedule for isolation test and further excavation by the end of 07/26/11. email copied to Cathy, Dave, Greg, Michael, Ray and Robert (Energi).07/27/11-Hiralkumar Patel.10:14 AM:- spoke with Greg. he will send draft report to his client for review and will submit to the department soon.12:30 PM:- spoke with Cathy and asked her to provide their insurance company's information including claim number. informed Cathy that the letter will be sent to property owner and Statewide as responsible parties. she questioned about not including Hess as responsible party. informed her that Hess was not involved in direct action, so it is not included as responsible party, but more parties may be considered responsible for spill, based on information submitted in future.1:10 PM:- received email from Cathy including their insurance company's information (listed above).sent letter to Tim and Mike (Statewide) requiring isolation test (result due on 08/10/11), complete soil delineation and endpoint samples. report for soil delineation and endpoint sample is due on 08/31/11.1:25 PM:- letter emailed to Mike, Mr. Dowling, Dave and Mr. Sojka.1:27 PM:- letter and a notice of violation (issued by DEC Ajoku for PBS violations) emailed to Tim, Cathy and Greg.1:48 PM:- letter emailed to Mr. Medkov.copy of letter mailed to Mr. Levine, Marilou Kirkpatrick (Tower Group) and William Greene (Tower Group).07/29/11-Hiralkumar Patel. received email from Chris (at 6:16 PM on 07/28/11) including letter. he confirmed that isolation test will be conducted on 08/04/11.08/01/11-Hiralkumar Patel.12:52 PM:- received message from Mr. Dowling from

Energi.08/03/11-Hiralkumar Patel.9:25 AM:- spoke with Mr. Dowling. he requested copy of PBS regulation. referred him to DEC public website. also asked him about cleanup status. he mentioned that Energi doesn't believe that oil company is at fault and they are not covering the cleanup cost.9:29 AM:- spoke with Greg about cleanup status. he mentioned that further cleanup has not been scheduled yet.9:31 AM:- spoke with Tim. he mentioned that he is meeting with Greg tomorrow during tank test and will discuss for further cleanup.9:34 AM:- spoke with Mike at Statewide and informed him about scheduled tank test tomorrow.08/04/11-Hiralkumar Patel.1:08 PM:- received call from Chris. he mentioned that they did whole system test today and found tank system tight. as the system is tight, asked him not to perform isolation test. he confirmed that no new pipes or joints installed or any repair done on the tank system. asked him to submit certified test result for review. he will submit results once get paid from customer.08/10/11-Hiralkumar Patel.10:30 AM:- met with Cathy, Greg and James Rigano (owner's attorney) in office during settlement conference for PBS NOV. asked Cathy to submit result of tank test, and reminded her that soil delineation and endpoint sample report is due on 08/31/11. Greg mentioned that they are planning to start further excavation next week.James P. RiganoRigano LLCPh. (631) 756-5900Fax (631) 756-0008email: jrigano@riganollc.comduring settlement conference, property manager told DEC Urda that the tank system failed a test in May 2011 but was not reported. there was some repair done and system passed the test in Jun 2011.11:15 AM:- spoke with Donna and Chris from ABC at DEC Urda's office. Chris mentioned that tank was pressure tested on 05/19/11 and it failed. the system failure was not reported as pressure test method is not acceptable by DEC or EPA. he mentioned that ABC uses pressure test method to quickly identify any problems. during pressure test, crew applies about 5 lbs of pressure. if pressure test fails, they do minor repairs (like joints/valve/gasket etc.) and then conduct a EZ3 Locator vacuum test. if the system fails EZ3 test, then they report system failure. Chris mentioned that while the pressure test method can detects leaks, it is not accurate for establishing tightness, so even after passing a pressure test, they do a vacuum test. asked Chris/Donna to submit result of tank system test and work history since May 2011, for the subject site.as per 6 NYCRR 613.8: "The results of any inventory record, TEST or inspection which shows a facility is leaking must be reported to the Department within two (2) hours of the discovery."informed DEC Urda about tell-tale line, and we discussed the above with DEC Albany Brauksieck.11:21 AM:- received email from Chris including tank test result. result shows tight tank, but doesn't include whether it was tank only or tank system test.1:19 PM:- sent email to Chris and asked him to submit revised test result confirming whether tank only or tank system test. also asked him to submit signed pdf copy (instead of unsigned excel file).12:32 PM:- received email from Donna including work history at the site. as per the letter- 05/17/11: the 12,000 gal tank was pumped out and squeegee cleaned- 05/18/11: performed tank only test. installed new gasket, nuts and bolts set- 05/19/11: performed pressure test of tank which failed. made repairs to two existing fittings on top of tank- 05/20/11: disconnected fill line and performed pressure test of tank only which passed- 05/25/11: steam cleaned suction and return lines. performed pressure test of suction and return lines which passed- 05/26/11: reconnected lines back to tank- 06/02/11: performed tightness test of tank system and it passed- 06/27/11: installed new

company's attorney**Louis, Johs, Avallone, AvilesPh. (631) 755-0101 Ext. 336email: smweinberg@louisjohs.com09/15/11-Hiralkumar Patel.10:36 AM:- received email from DEC Urda including response from by James Rigano (owner's attorney) regarding settlement conference on 08/10/11. Mr. Rigano stated, "It is our understanding that the tell-tale line was operational and that the oil delivery driver was not properly observing the delivery or the discharge from the tell-tale resulting in overfill."10:40 AM:- DEC Urda and I spoke with Chris (ABC tank) regarding condition of tell-tale line. Chris mentioned that when he responded to the site on 06/27/11, first time after spill event, he met with Anthony (Riteway Tank). they discussed about the amount lost during spill event. Chris mentioned that there are old heating coils in tank. he mentioned that if product is measured using stick line, the stick must be thin enough to go through gap between two coils. he suspected that product measurements right after the spill event were not correct and tank itself never leaked from any point. during same meeting with Anthony, Anthony mentioned about tell-tale line and they dug out the area around the fill port. they found the end of the tell-tale line in the fill box area. Chris mentioned that no product/staining/odors were detected in soil in fill box area indicating that tell-tale line was not functional. he said it looked like there was some kind of cap on tell-tale line or it was totally plugged by debris. asked Chris to send written confirmation about his observation while exposing tell-tale line.11:20 AM:- visited site with DEC Urda to check tell-tale line in fill box. upon arrival, found fill box filled with dirt and leaves. after removing debris, found clogged tell-tale line end in fill box area. minor odors noticed in dirt on top (could be minor spill during deliveries), but no odor/staining observed in soil close to/around the tell-tale line end. during visit, spoke with third floor resident who told that oil comes up from the driveway when it rains.during visit, inspected tank excavation area. found excavation area not covered and was not secured. no odors noticed in close proximity to the tank. observed tell-tale line along the adjacent building wall.1:05 PM:- DEC Urda and I spoke with Anthony at Riteway. he stated, "no oil came out of that tell-tale line."09/16/11-Hiralkumar Patel.3:54 PM:- received call from Tim. he mentioned that tank removal contractor visited site yesterday and mentioned that they may need NYC DOB permit for tank removal. he mentioned that contractor's expeditor is currently in NYC DOB's office. Tim asked for extension for tank removal. asked him to provide update on 09/19/11 including NYC DOB inspector's contact info prior to any discussion about time extension.9/19/11-Vought-After further discussion with DEC Patel and recent questions of the presence or absence of contamination by tell-tale line, Vought noted that during previous site visit on 6/27/11, tell-tale line was inspected by Vought along with Riteway Lara and ABC. Tell-tale line next to fill port was clogged with soil and showed no indications of seepage or free product. Furthermore, Vought observed no olfactory or visual evidence of petroleum contamination at fill port and tell-tale line.09/19/11-Hiralkumar Patel.3:45 PM:- received letter from ABC Tank confirming no contamination found by remote fill port area.10/4/11-Vought-Discussed site with DEC Urda and Vought called and spoke to Statewide Oil (Mike Savino Ph:718-858-9000) and requested any written confirmation of amount that was ordered during spill and amount that was delivered when spill occurred. Savino agreed to fax in information. Savino noted that delivery information

on Hess's computer was purged due to age. Mike has delivery receipt for day of spill showing amount delivered and he will call Hess and see if records are available of amount ordered. Vought received faxes of delivery receipt showing 4415-gallons delivered and 6000-gallons ordered. Vought gave receipts to DEC Urda.10/12/11-Hiralkumar Patel. received email from DEC Urda (at 7:29 AM on 10/03/11) including email sent by James Rigano, property owner's attorney. Mr. Rigano sent email to DEC Urda (at 5:42 PM on 09/30/11) including letter from Greg regarding condition of tell-tale line.10:47 AM:- left message for Greg.1:56 PM:- spoke with Greg. he mentioned that tank has been removed and collected three endpoint bottom soil samples from area underneath the tank. as per Greg, soil under the tank is clean. they also dug soil to the bottom of adjacent property's footings and collected three endpoint sidewall samples. he also collected soil sample from the front end tank area. results of sidewall samples and front end bottom sample will come next week. as no further excavation possible (due to structural safety), they are going to backfill the excavation this week.10/13/11-Hiralkumar Patel.11:21 AM:- received call from Tim. he mentioned that before removing tank, he spoke with NYC DOB and he was told that they don't need permit as tank removal is required by NYS DEC (informed Tim that the DEC required remediation). so they removed that tank and today while backfilling the excavation, a NYC DOB inspector visited site and asked for permit. DOB inspector asked Tim to produce a letter from DEC stating that tank removal work was required by DEC. informed Tim that DEC does not issue such letter and he can provide copy of previously sent letter dated 07/27/11 which requires remediation of petroleum contaminated soils. Tim will talk to DOB inspector.11/21/11-Hiralkumar Patel. received copy of signed consent order from legal (at 11:08 AM on 11/18/11).11:01 AM:- spoke with John at Associated. John doesn't know about the project and Greg is out of office and will return on 11/28/11. John will ask Greg to call back.12/02/11-Hiralkumar Patel. received email from Greg (at 7:04 PM on 12/01/11) including a UST closure report. after removing tank, total of eight endpoint samples were collected: four samples (UST-1 through UST-3 and UST-W) were collected beneath and adjacent to the former UST location and four samples (EP-10 through EP-13) were collected from the base of the northern retaining wall and eastern end of the former UST location. some VOC contamination found in samples UST-W (N: 1,450 ppb) and EP-12 (X: 954 ppb, 1,2,4: 2,120 ppb, 1,3,5: 1,200 ppb).12/08/11-Hiralkumar Patel. after discussing with DEC Urda and DEC Austin, case closed.2:43 PM:- sent spill closure letter to Cathy and Michael. letter emailed to Cathy, Michael, Tim and Greg.

Remarks: 1534 THE CALLER WAS NOT CERTAIN ON THE AMOUNT BUT ESTIMATED ABOUT A 1000 GALLONS. CAUSE IS OVERFILL. CLEAN UP IS PENDING UPON OIL COMPANY ARRIVAL. SEWER DRAINS HAVE BEEN IMPACTED.

DEC Memo: 02/27/09-Zhune spoke to Jerry Drenis (718) 435-2200 from Olympic Flame Fuel Oil. he said wrong amount caused overfilled by vent pipe. Approximately 20-30 gallons of oil went to the driveway. It's all contained. Oil company is doing the cleanup. No drain affected. Only two gallons went to a soil square with grass it's been digging out. Mark superintendent Ph: (917)642-4853.3/6/2009 Sangesland spoke to Mark the super - he said the oil company did a "beautiful job" with the cleanup. Case closed.
Remarks: CALLER STATES THAT DUE TO A OVERFILL ABOUT 30 GALLON SPILLED OUTSIDE. SPILL IS CONTAINED. CLEAN UP IS PENDIGN.

Contact Phone: (212) 580-6765
 DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "O'CONNELL"e2mis notes:9/4/01, 0155 hrs: approx 6 gallons unknown oil on approx 1000 gallons water in manhole. Chem lab notified to take sample.9/4/01, 1342 hrs: lab results 1.8 ppm PCB9/6/01, 1055 hrs: Inspection of manhole found corroded area on the east end wall of feeder 72. When tape was removed from corroded area, leak area was exposed causing oil to spill at approx 1 qt per hour. The oil coming from the pipe is DF100 (non-PCB). Pads, blankets and half drum were placed underneath the pipe to catch oil. Repairs are in progress.9/7/01, 0600 hrs: barrel installation completed. Estimated that approx 6 gallons of dielectric fluid was released from the time the tape was removed from the corroded area until the repair was made.9/7/01, 1400 hrs: Barrel was tapecoated and concrete was poured. No oil hit manhole floor - all was contained with pads and half drum. (JHO)
 Remarks: 6 GALLONS OF UNKNOWN OIL ON 1000 GALS OF WATER. CON ED SPILL NUMBER 139264. CLEANUP PENDING RESULTS.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "KRIMGOLD" 1/27/04. Jake Krimgold responded to the site. Observed soil excavation and UST removal. Slight gasoline odor in the air. Not able to find PBS registration and referred to DLE. Site is in the Voluntary Cleanup Program. Jim Drumm (518-402-9774) DEC Albany is managing the site under old Voluntary Cleanup Agreement see spill # 9416654 and PBS # 2-156752.NFA. YK.

Remarks: CALLER STATES CONSTRUCTION GOING ON AND SHE SMELLS GASOLINE. USED TO BE A GAS STATION, STRONG ODOR WANTED SOMEONE TO CHECK OUT.

Site Description: Location: The Former Willow Street Service Station site is located at 18-02 27th Ave. in Long Island City. Site Features: The Site is approximately 1/4 acre in size. A building was constructed on site with hardware store on the first floor and apartments on the upper floors. Current Zoning: The area is zoned commercial/residential. The gas station has been demolished and a commercial/residential building erected in its place. The surrounding community is a mixed residential/commercial area. Historical Uses: Since 1948, the site was a gas station. Investigations showed that the service station tanks leaked, contaminating the subsoils as well as groundwater. The primary contaminants of concern are benzene, ethylbenzene, toluene, xylene and MTBE. Site Geology and Hydrogeology: Groundwater is 17-20 feet below the ground surface. Soils consist of silt with some clay. The Final Engineering report has been approved. Site management activities (groundwater treatment and sub-slab depressurization) have begun. The Volunteer has been submitting quarterly monitoring reports. Release letter was issued May 19, 2010.

Env Problem: Nature and Extent of Contamination: Remediation at the site is complete. Prior to remediation, the primary contaminants of concern were benzene, ethylbenzene, toluene, xylene and MTBE in both soil and groundwater.

Health Problem: The site cleanup has been completed and a commercial/residential building occupies the site. Residual on-site petroleum free product will be recovered using the existing active recovery treatment system. Soil vapor contamination is addressed with the operation of a depressurization system below the slab of the new building. The public is not expected to come in contact with any soil contamination remaining on-site since it is capped and managed with a site management plan. Public water supplies serve area residents from the New York City public water system.

Facility name: BLACK OX METAL FINISHING INC
Classification: Large Quantity Generator

Date form received by agency: 03/28/2003
Facility name: BLACK OX METAL FINISHING INC
Classification: Large Quantity Generator

Hazardous Waste Summary:

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Violation Status: No violations found

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "ROMMEL."This spill case was reassigned from DEC (Sigona) to Rommel on 02/10/2004.This spill site cleanup has been consolidated under Spill No. 9708403.2/5/04 Current PBS owner Cumberland Farms.11/22/04On site fueling Jeep at dispenser #3.Nozzle failed to turn off when tank was full caused 1/2 gallon of gasoline to spill on Jeep and asphalt. Directed attendant to take dispenser out of service until repaired. Angela Pimental of Cumberland Farms notified of problem via email at 10:09am. Rommel>>> "Angela Pimental" <APimental@cumberlandfarms.com> 11/22/04 03:29PM >>>the vendor is on site now replacing the nozzle that you had problems with this morning.Tyree went to the site earlier to remove the speedi-dry from the gallon spill.Angela PimentalSenior Project ManagerCumberland Farms, Inc.777 Dedham St.Canton, MA. 02021Phone:781-828-4900 ext.3416Fax:781-575-95366/14/05: This spill case transferred from Rommel to J. Kolleeny. - JK04/25/06: Reviewed quarterly monitoring reports from 4th Quarter 2004 through 1st Quarter 2006, submitted by Leggette, Brashears & Graham, Inc. (LBG). The groundwater data in these reports indicate there is virtually no petroleum-related groundwater contamination in the existing on-site monitoring wells. Based on this, LBG requests closure of this spill case.Sent response letter to Ms. Angela Pimental of CFI, with cc to Jorma Weber of LBG, stating: "The Department notes that none of the existing monitoring wells are down-gradient of the site's underground storage tanks and fuel dispensers with respect to the groundwater flow direction (well MW-1, which has shown traces of contamination in the past, appears to be cross-gradient of the dispenser islands). We therefore request that a Geoprobe investigation be performed, with collection of soil and groundwater samples from two borings: one advanced between the USTs and the dispensers, and one to the southwest of the USTs in the driveway along 27th Avenue. Please prepare and submit a brief work plan for such an investigation, to rule out the presence of significant petroleum-related impacts at the site."Changed priority status of site to P0. - J. Kolleeny 6/26/06: Received work plan on 6/23/06, for investigation requested by DEC in late April '06. Plan involves advancing 2 Geoprobe borings, with collection of soil and groundwater samples. Sent email approving the plan on 6/26/06, asked for email notice of fieldwork. - J. Kolleeny09/06/06: Received and reviewed subsurface investigation report from LBG dated August 31, 2006. Two borings were advanced as requested by DEC, with collection of soil and groundwater samples. None of the soil or groundwater samples contained VOCs at levels above DEC soil guidance values or groundwater standards, therefore, no further investigation or remedial action is warranted at this site. Closed spill and issued NFA letter (in eDocs). - J. Kolleeny

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Number of Days to Update: 62	Next Scheduled EDR Contact: 07/22/2013
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/26/2013	Source: EPA

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/04/2013	Source: EPA
Date Data Arrived at EDR: 03/01/2013	Telephone: 703-412-9810

	Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 02/12/2013

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 03/14/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/29/2013	Telephone: 703-603-0695
Date Made Active in Reports: 05/10/2013	Last EDR Contact: 06/10/2013
Number of Days to Update: 42	Next Scheduled EDR Contact: 09/23/2013
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 03/14/2013	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/29/2013	Telephone: 703-603-0695

	Data Release Frequency: Semi-Annually

State and tribal leaking storage tank lists

LTANKS: Spills Information Database

Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills.

Date of Government Version: 05/21/2013	Source: Department of Environmental Conservation
Date Data Arrived at EDR: 05/23/2013	Telephone: 518-402-9549
Date Made Active in Reports: 07/10/2013	Last EDR Contact: 05/23/2013
Number of Days to Update: 48	Next Scheduled EDR Contact: 09/02/2013
	Data Release Frequency: Varies

HIST LTANKS: Listing of Leaking Storage Tanks

A listing of leaking underground and aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills. In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY LTANKS database. Department of Environmental Conservation.

Date of Government Version: 01/01/2002	Source: Department of Environmental Conservation

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

State and tribal Brownfields sites

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: Rextag Strategies Corp.

Telephone: (281) 769-2247

U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers

Source: Department of Health

Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

Elevation: 23 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map: 40073-G8 CENTRAL PARK, NY NJ
Most Recent Revision: 1995

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County
QUEENS, NY

FEMA Flood
Electronic Data
YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 360497 - FEMA DFIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property
CENTRAL PARK

NWI Electronic
Data Coverage
YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Location Relative to TP: 1 - 2 Miles ENE
Site Name: Astoria Central Treatment Fac/
Site EPA ID Number: NYD980593636
Groundwater Flow Direction: GENERALLY N TOWARD THE EAST RIVER.
Measured Depth to Water: approximately 6 feet.
Hydraulic Connection: The surficial upper glacial aquifer is generally of poor permeability and is underlain by bedrock.
Sole Source Aquifer: A sole source aquifer is present at or near the site
Data Quality: Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era: Mesozoic
System: Cretaceous
Series: Upper Cretaceous
Code: uK (decoded above as Era, System & Series)

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
loamy sand
sandy loam
fine sandy loam

Surficial Soil Types: silt loam
loamy sand
sandy loam
fine sandy loam

Shallow Soil Types: sandy loam

Deeper Soil Types: unweathered bedrock
very gravelly - loamy sand
stratified
sandy loam

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

GEOCHECK® - PHYSICAL SETTING SOURCE MAP FINDINGS RADON

AREA RADON INFORMATION

Federal EPA Radon Zone for QUEENS County: 3

- Note: Zone 1 indoor average level > 4 pCi/L.
- : Zone 2 indoor average level \geq 2 pCi/L and \leq 4 pCi/L.
- : Zone 3 indoor average level < 2 pCi/L.

Federal Area Radon Information for QUEENS COUNTY, NY

Number of sites tested: 81

<u>Area</u>	<u>Average Activity</u>	<u>% <4 pCi/L</u>	<u>% 4-20 pCi/L</u>	<u>% >20 pCi/L</u>
Living Area	0.620 pCi/L	97%	0%	3%
Basement	0.970 pCi/L	93%	6%	1%

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Source: Department of Environmental Conservation

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

State Database: NY Radon

Source: Department of Health

Telephone: 518-402-7556

Radon Test Results

Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

www.edrnet.com

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2012. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EDR Environmental Lien and AUL Search

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.

Please contact EDR at 1-800-352-0050
with any questions or comments.

TOGETHER with all right, title and interest, if any, of the party of the first part in and to any streets and roads abutting the above described premises to the center lines thereof,

TOGETHER with the appurtenances and all the estate and rights of the party of the first part in and to said premises,

TO HAVE AND TO HOLD the premises herein granted unto the party of the second part, the heirs or successors and assigns of the party of the second part forever.

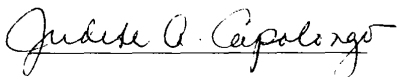

AND the party of the first part, in compliance with Section 13 of the Lien Law, covenants that the party of the first part will receive the consideration for this conveyance and will hold the right to receive such consideration as a trust fund to be applied first for the purpose of paying the cost of the improvement and will apply the same first to the payment of the cost of the improvement before using any part of the total of the same for any other purpose.

The word "party" shall be construed as if it read "parties" whenever the sense of this indenture so requires.

IN WITNESS WHEREOF, the party of the first part has duly executed this deed the day and year first above written.

In PRESENCE OF:

New York City Industrial
Development Agency

Deputy Executive Director

STATE OF NEW YORK, COUNTY OF ss:

ALL these certain plots, pieces or parcels of land situate, lying and being in the First Ward of the Borough and County of Queens, City and State of New York, bounded and described as follows:

PARCEL "A"

Beginning at a point on the northerly side of 26th Avenue formerly known as the Boulevard as shown upon the Commissioners Map of Long Island City, distant 131.76 feet easterly measured along the northerly side of 26th Avenue from a point formed by the intersection of the northerly side of 26th Avenue with the centre line of 8th Street formerly known as Stevens Street as shown on said Commissioners Map; RUNNING THENCE Northerly parallel with the westerly side of 9th Street formerly known as Wardell Street as shown on said Commissioners Map 200 feet to the original high water line of the East River; THENCE Easterly along said high water line to a point in the westerly side of 9th Street distant 162 feet more or less northerly from the corner formed by the intersection of the westerly side of 9th Street with the northerly side of said 26th Avenue; THENCE Southerly along the westerly side of said 9th Street, 162 feet more or less to the corner formed by the intersection of the westerly side of 9th Street with the northerly side of 26th Avenue and THENCE Westerly along the northerly side of 26th Avenue as same curves, 102.03 feet to the point or place of BEGINNING. (Continued)

PARCEL I (Continued)

PARCEL "B"

BEGINNING at a point where the centre line of 8th Street formerly known as Stevens Street intersects the northerly side of 26th Avenue formerly known as the Boulevard as said 8th Street and 26th Avenue are shown on the Commissioners Map of Long Island City;

RUNNING THENCE easterly along the northerly side of 26th Avenue 233.79 feet to the corner formed by the intersection of the northerly side of 26th Avenue with the westerly side of 9th Street formerly known as Wardell Street as shown on said Commissioners Map;

RUNNING THENCE Southerly on a line in prolongation of the westerly side of 9th Street 31.27 feet to the centre line of 26th Avenue;

RUNNING THENCE westerly along the centre line of 26th Avenue as the same curves 233.46 feet to a point in the centre line of 8th Street if said centre line were prolonged and

THENCE Northerly along said prolongation of the centre line of 8th Street 30.01 feet to the point or place of BEGINNING.

PARCEL II

ALL that piece or parcel of land, with the buildings and improvements thereon, situated, lying and being in the Borough of Queens, County of Queens, City and State of New York, bounded and described as follows:

BEGINNING at a point where the center line of Stevens Street is intersected by the Northerly line of Boulevard;

RUNNING THENCE Northerly and along the center line of said Stevens Street, two hundred and forty-two (242) feet to the line of original high water;

RUNNING THENCE Easterly and along the line of original high water to a point in a line drawn parallel to Wardell Street and distant one hundred and eight hundredths (100.08) feet Westerly therefrom, which point is two hundred (200) feet Northerly from the northerly side of Boulevard, measured along above mentioned line;

RUNNING THENCE Southerly and parallel to Wardell Street two hundred (200) feet to the Northerly side of Boulevard;

RUNNING THENCE Westerly and along the said Northerly side of the Boulevard, one hundred thirty-one and seventy-six hundredths (131.76) feet to the center line of Stevens Street, the point or place of BEGINNING.

ALSO all right, title and interest in and to that certain parcel of land under the waters of the East River in front of the upland now or lately owned by the heirs of Josiah Blackwell, deceased, in that
(Continued)

PARCEL II (Continued)

part of Long Island City, lately known as the Village of Astoria, which land under water is described as follows:

BEGINNING at the intersection of the original high water line of the East River with the center line of Stevens Street and

RUNNING THENCE North thirty degrees, thirty minutes East (NO. 30 degrees 30' E.), one hundred nine (109) feet to the exterior bulkhead line of the East River, as established by the Harbor Commissioners and laid down on the map filed by them in the Office of the Secretary of State;

THENCE along said exterior line South thirty-nine degrees, six minutes East (S. 39 degrees 6' E.), one hundred forty-one feet, five inches (141'5");

THENCE South thirty degrees, thirty-eight minutes West (S. 30 degrees 38' W.) one hundred five (105) feet to the original high water line aforesaid; and

THENCE Northwesterly, along said line to the place of beginning.

Containing fourteen thousand two hundred and three (14,203) square feet.

PARCEL III

ALL that certain lot, piece or parcel of land, situate, lying and being in the First Ward of Long Island City, Borough and County of Queens, City and State of New York, bounded and described as follows: BEGINNING at a point on the northeasterly side of 26th Avenue (The Boulevard) (Formerly Orchard Street), distant 200.19 feet southeasterly from the point of intersection of the southeasterly side of Perrot Place, formerly Perrot Avenue, and the northeasterly side of the Boulevard,

THENCE Northeasterly parallel to Perrot Place, 562.23 feet to the U.S. Pier and Bulkhead Line; and

RUNNING THENCE in a southerly direction and along the U.S. Pier and Bulkhead Line, 282 feet, more or less to its intersection with the center line of 8th Street (Stevens Street); and

RUNNING THENCE Southwesterly and along the center line of said 8th (Stevens Street), 346.37 feet to the northeasterly side of 26th Avenue; and

RUNNING THENCE Northwesterly along the Northeasterly side of 26th Avenue, 200.16 feet to the point or place of BEGINNING.

PARCEL IV

ALL that certain lot, piece or parcel of land, situate, lying and being in the First Ward, of the Borough of Queens, City of New York, County of Queens, and State of New York, bounded and described as follows:

BEGINNING at a point where the center line of 8th Street formerly known as Stevens Street intersects the southerly side of 26th Avenue, formerly known as Boulevard;

RUNNING THENCE Easterly along the southerly side of 26th Avenue 233.30 feet to the corner formed by the intersection of the southerly side of 26th Avenue with the westerly side of 9th Street formerly known as Wardell Street;

RUNNING THENCE Southerly along the westerly side of 9th Street 116.91 feet to a point distant 403.46 feet northerly from the corner formed by the intersection of the westerly side of 9th Street with the northerly side of 27th Avenue formerly known as Franklin Street, measured along the westerly side of 9th Street;

THENCE Westerly at right angles to 9th Street 100.09 feet;

THENCE Southerly parallel with the westerly side of 9th Street 151.21 feet to a line drawn parallel with the northerly side of 27th Avenue and distant 250.03 feet northerly therefrom measured along the easterly side of 8th Street;

THENCE Westerly parallel with the northerly side of 27th Avenue 106.15 feet to the easterly side of 8th Street; (Continued)

PARCEL IV (Continued)

THENCE Southerly along the easterly side of 8th Street 250.03 feet to the corner formed by the intersection of the easterly side of 8th Street with the northerly side of 27th Avenue;

THENCE Westerly along a prolongation of the northerly side of 27th Avenue 25.01 feet to the center line of 8th Street; and

THENCE Northerly along the center line of 8th Street 500.56 feet to the southerly side of 26th Avenue at the point or place of beginning.

The above distances are according to the United States Standard of Measurements.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-05 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records – The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquiries (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of G.C. Environmental on Jul 16, 2013.

TARGET PROPERTY

4-05,4-55,4-57,8-01,8-51 26th Ave & 4-34 8th St
Astoria, NY 11102

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeyman:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000

Permit Type: Bldg -

New Permit Number: 101000000405

Status: Valuation: \$1,000,000.00

Contractor Company: OWNER-BUILDER

Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

The EDR Property Tax Map Report

EDR Property Tax Map Report

Environmental Data Resources, Inc.'s EDR Property Tax Map Report is designed to assist environmental professionals in evaluating potential environmental conditions on a target property by understanding property boundaries and other characteristics. The report includes a search of available property tax maps, which include information on boundaries for the target property and neighboring properties, addresses, parcel identification numbers, as well as other data typically used in property location and identification.

1.0 INTRODUCTION

1.1 Purpose and Policy

This Health and Safety Plan (HASP) has been developed to comply with the regulations under Occupational Safety and Health Administration (OSHA) 29 CFR 1910.120(b)(4), Hazardous Waste Operations and Emergency Response. It addresses foreseeable activities associated with the site work activities to be conducted at 8-01 26th Avenue in Astoria, Queens, New York (see Figure 1). This HASP establishes personnel protection standards and mandatory safety practices and procedures.

GCE personnel involved with inspection of site work activities which involve soil borings in the identified Area of Concern (AOC) during the proposed work shall comply with the requirements of this HASP. All GCE personnel engaged in onsite activities will read this document carefully and complete the **Safety Briefing Form (Attachment A)**, a copy of which will be provided to GCE's Project files. Personnel who have any questions or concerns regarding implementation of this plan are encouraged to request clarification from the GCE Project Manager. Field personnel must follow the designated health and safety procedures, be alert to the hazards associated with working close to vehicles and equipment, and use common sense and exercise reasonable caution at all times.

The levels of protection and procedures specified in this HASP are based on the best information available from historical data and recent evaluations of the Site. Therefore, these recommendations represent the minimum health and safety requirements to be observed by all personnel engaged in work at the site. Unforeseeable site conditions, changes in scope of work, or hazardous conditions not previously considered will warrant a reassessment of the protection levels and controls stated. Refer to below sections for requirements pertaining to field modifications and changes to the HASP.

2.0 SITE ORGANIZATION AND COORDINATION

Phase II Site Investigation activities will be performed by G. C. Environmental, Inc. All work will be performed under the direction of the Site Supervisor/Project Manager and support staff.

The following section describes the organizational structure for GCE during the Phase II Site Investigation. Key personnel and their responsibilities are listed below:

Personnel Name	Title/Responsibility	Contact Information
Mr. Gregory Collins	Site Safety and Health Officer	T: 631-206-3700 Email: gc@gcenvironmental.com
Mr. Ravi Kumar Kolaventi	Site Supervisor/Project Manager	T: 631-206-3700 Email: ravikolaventi@gcenvironmental.com
Mr. TR Revella	Principal Investigator	T: 631-206-3700 Email: trrevella@gcenvironmental.com

2.1 SITE SAFETY AND HEALTH OFFICER

The SSHO advises the Site Supervisor on safety and health issues and conducts briefings prior to initiation of site activities. The SSHO assesses the potential for worker exposures to

hazardous agents, recommends appropriate hazard controls for protection of task site personnel, and will require personnel to obtain immediate medical attention in the event of a work-related injury or illness. The SSHO ensures any necessary monitoring of potential chemical hazards is performed, reviews the effectiveness of monitoring and personal protective equipment, and recommends upgrades or downgrades in protective safety and health measures. The SSHO ensures that appropriate fall protection measures are available and that needed work permits are obtained. The SSHO notifies the Office of Radiation Protection when radiological support is required. The SSHO has stop work authority and advises emergency response personnel of an emergency. The SSHO authorizes the return to work following resolution of any safety and health hazards or other stop work issues. The SSHO ensures that this HASP is revised and approved if there are changes in site conditions or tasks. The SSHO will be available for consultation when required and will be aware of project-related work occurring on-site.

2.2 SITE SUPERVISOR

The Site Supervisor has primary responsibility for directing and managing all site investigation field activities, including coordination with any support organizations. The Site Supervisor ensures that all on-site project personnel meet the required level of training, have reviewed the HASP, and are instructed in safe work practices. The Site Supervisor also ensures that a qualified SSHO is designated, maintains a current copy of the HASP, and documents field changes to the HASP in the project logbook. In addition, the Site Supervisor and staff perform oversight of field activities, maintain awareness of site operations, and ensure that all project personnel adhere to ES&H requirements in order to prevent potential accidents from occurring.

The Site Supervisor is responsible for ensuring that the following five core functions of the Integrated Safety Management System (ISMS) are fulfilled appropriately:

- Define the work, roles and responsibilities. Allocate resources to ensure that research goals are balanced with safe work practices.
- Identify and analyze the hazards using the ESH&Q evaluation, consultation with subject matter experts, material safety data sheet information, Work Smart Standards (WSS), lessons learned by other Principal Investigators (PIs) and staff, and other resources.
- Develop and implement hazard controls tailored to the work being performed.
- Resources include contractor staff, subject matter experts, the Hazardous Materials Inventory System, project procedures, Training Needs Assessment process, Laboratory Operating Manuals, Laboratory Stewards, and Lessons Learned and Alerts.
- Examples of actions and tools include optimization of engineering controls and procedural approaches with training, HAZCOM job-specific training, job pre-briefings, compliance-based and project-specific training, ES&H permits (e.g.,RWPs, Lockout/Tagout process), and protective equipment.

Perform work within controls to ensure the work is done safely:

- Communicate expectations to project staff.
- Ensure that the controls identified in the ESH&Q evaluation and HASP are carried out.
- Ensure opportunity for procedure modification to respond to unanticipated situations.

- Stop work if imminent danger exists.

Provide feedback and continuous improvement:

- Solicit feedback from project staff regarding ESH&Q issues and act on that input.
- Communicate concerns to and seek help from supervisors and the ESH&Q group.
- Reallocate resources to address issues that arise.
- Ensure safety meetings and site briefings are performed.

2.3 PRINCIPAL INVESTIGATORS (PI) AND FIELD PROJECT PERSONNEL

PIs and field project personnel involved in onsite operations are responsible for understanding the intent of the principles of Integrated Safety Management and are to be knowledgeable of the processes in place to satisfy the intent of Integrated Safety Management Plan.

- Define the Scope of Work
- Understand the expectations they are to meet in their particular work assignment.
- Understand the responsibilities of the Site Supervisor and SSHO.
- Provide documentation of training to the Site Supervisor.
- Identify and Analyze the Hazard
- Notify the SSHO of any special medical conditions (i.e., allergies, diabetes, etc.).
- Actively participate in identification of hazards prior to beginning work.
- Ensure that potential work hazards have been evaluated by subject matter experts and are accounted for in all work practices.
- Develop and Implement Hazard Controls
- Seek the help of the SSHO and other subject matter experts, as appropriate, to analyze the hazards.
- Ensure that control strategies are developed and implemented, as appropriate, before work begins.
- Ensure safety measures are incorporated into activities (i.e., through HASP addendums or amendments, work aides, or standard operating procedures).
- Perform Work within Controls

- Perform only those tasks that they believe they can do safely.
- Meet the responsibilities and safely perform the tasks that are delegated to them.
- Take all reasonable precautions to prevent injury to themselves and to their fellow employees; be alert to potentially harmful situations.
- Suspend work if unexpected concerns arise and modify plans to address concerns before resuming work.
- Comply with the work plan and HASP as well as postings and rules at the project site.
- Provide Feedback and Continuous Improvement
- Keep the SSHO and Site Supervisor informed of any issues, problems, or concerns regarding all aspects of their work.
- Notify appropriate management personnel or the facility point of contact of any unsafe condition, violation, noncompliance, or an environmental threat discovered in a facility.
- Report to the SSHO any changes in site conditions that may affect safety and health.
- Immediately notify the SSHO of symptoms or signs of exposure potentially related to any chemical, physical, or biological hazards present at the site and immediately report any accidents, injuries, and/or unsafe conditions to the SSHO.
- If unsafe conditions develop, task site personnel are authorized and expected to stop work and notify the SSHO and Site Supervisor of the unsafe condition.

3.0 INTEGRATED SAFETY MANAGEMENT SYSTEM (ISMS)

The ISMS process systematically integrates safety into management and work practices at all levels so work objectives are accomplished while protecting the public, the worker, and the environment. Direct involvement of workers during the development and implementation of safety management systems is essential for success. Therefore, all personnel are expected to incorporate the following basic ISMS core functions during all work activities:

- Defining the scope of work;
- Identifying and analyzing hazards associated with the work;
- Developing and implementing hazard controls;
- Performing work activities within these controls; and
- Providing feedback on the adequacy of the controls to continue improving safety management.

4.0 TASK SPECIFIC HAZARD EVALUATION AND CONTROLS

The purpose of this task is hazard evaluation to identify and assess potential hazards that personnel might encounter and to prescribe methods of hazard control. Given the past uses at the Site (industrial), the potential environmental concerns associated with either possible fuel oil use and/or the historic land use of the surrounding area and according to the requirements of the NYSDEC, chemicals to be potentially encountered during investigation activities may be petroleum-related compounds, and typical generic contaminants in urbanized areas such as VOCs, SVOCs, and heavy metals.

A description of sampling procedures and the activities to be conducted at the Site during the required Phase II Site Investigation are described below.

4.1 FIELD SAMPLING AND ANALYSIS OF SOIL & GROUNDWATER

Task Description: Procedures for field sampling and analysis of surface soils, subsurface soils and groundwater are described in the Phase II Site Investigation Work Plan. Soil samples will generally be obtained by a Geoprobe or manual means (groundwater if collected via a temporary monitoring well).

Samples will be handled and transported according to regulatory requirements and procedures outlined in the Site Investigation Work Plan. Samples will be preserved and stored as required by the analytical protocols (e.g., cooled, preservative added). Storage on site may occur for short periods of time in ice chests containing “blue ice” but will be quickly transferred to refrigerator storage in the fixed base laboratory at the appropriate temperatures. All storage of contaminated samples will follow procedures and relevant regulations.

Equipment Used: Equipment used during investigation activities may include Geoprobe, augers, slam bars, shovels, etc.

Task Hazards and Controls:

Chemical and Radiological Hazards

- **Soil Contact:** As no specific soil or groundwater sample data is available, the risk of chemical exposure from short-term exposure to soil or other environmental media samples is minimal. However, direct contact with contaminated materials should be avoided; therefore, disposable latex or nitrile gloves and safety glasses will be worn when conducting soil and sediment sampling to prevent eye and skin contact.

Physical Hazards

- **Direct contact with equipment:** Precautions will be made to keep a minimum of ten feet from the maximum reach of the drilling equipment during its operation. Furthermore, all on-ground personnel will wear hard hats, leather work gloves, construction boots and safety glasses as necessary.

- Tripping/Falling: Precautions should be taken to avoid trip, slip, and fall accidents when climbing irregular or slippery surfaces. Before changing location visually survey the area for slippery surfaces and tripping hazards.
- Heat/Cold Stress: Wear clothing appropriate for environmental and weather conditions. Temperature extremes may be a hazard for consideration depending on the timing of the activity. Refer to below sections for discussion of recognition of symptoms and controls.

Biological/Vector Hazards

- Ticks/Snakes/Rodent/Pathogens: Be cautious of snakes, and vector carriers such as ticks. Check clothing and skin for ticks after walking in brush. Wash hands before eating and drinking.

Personal Protective Equipment Required to Address General Site Hazards

- Level of Protection: D
- Protective Clothing: Issued work clothes or disposable tyvek
- Head Gear: Safety glasses
- Gloves: Latex or nitrile (when conducting groundwater sampling or handling corrosive or oxidizing reagents)
- Footwear: Sturdy work shoes

5.0 OTHER HEALTH AND SAFETY PLAN ELEMENTS

5.1 REVISIONS/ MODIFICATIONS TO THE HASP

The following actions will warrant revision and approval of this plan by the appropriate health and safety disciplines:

- Change in tasks (or previously unidentified tasks) that could impact employee health and safety.
- Changes in hazards (unknown or not previously addressed) which require a significant change in, or addition to, respiratory protection (as defined in exemptions to the plan modifications), physical/barrier protection features, or other engineering controls.

5.1.1 Modifications allowed

The SSHO may upgrade PPE. These changes must be documented in the field logbook. The change and reason or evidence for the change must also be documented in the field logbook. For upgrades to include respiratory protection (including air-purifying and supplied air) for previously unidentified non-radiological issues or contaminants such as VOCs, the appropriate health and safety disciplines must be contacted. The SSHO will approve and document changes in PPE in the field logbook. Upgrades to include respiratory protection will require the SSHO to ensure workers have 40 Hour HAZWOPER Training and to assess any additional medical surveillance requirements.

5.2 MONITORING

Historical site data indicate that chemical exposure of site personnel will not be a significant concern within the scope of this project. However as only limited site information is available, monitoring may be required for all field activities. Site monitoring requirements may change based on site conditions. All changes must be documented in the site logbook.

5.3 SITE AND SPILL CONTROL

Site access will be controlled by the developer. An exclusion zone may be required for drilling operations and other field activities if required to reduce the accidental distribution of hazardous substances from contaminated areas to clean areas. The SSHO will determine, as needed, the locations of the support zone, contamination reduction zone, and the exclusion zone. Personnel accessing the zones must meet access requirements as stated in this plan.

5.4 PERSONAL PROTECTIVE EQUIPMENT

Level D protection is normally used when the potential for personnel contamination is low, as is the case with this project. Level D protection will include work clothing or disposable tyvek overalls. Details and special requirements have been covered in the hazard control sections of the specific tasks in above sections. Unexpected new hazards will require a reassessment of the specified PPE.

5.5 TEMPERATURE EXTREMES AND SITE CHARACTERISTICS

The effect of temperature extremes on personnel is a primary hazard associated with the activities conducted at the site. Symptoms and controls related to temperature extremes are considered in detail in this section.

Field activities conducted during the summer or winter pose a hazard because of temperature extremes. Since the project site is located in a relatively open area, workers will dress appropriately for environmental conditions, wearing clothing that provides reasonable protection against winter cold and summer sun. Although extreme physical exertion will not be likely within the scope of this project, during hot weather workers are encouraged to be aware of their own symptoms of heat stress (headaches, dizziness, increased heart rate), to drink plenty of water, and to take breaks as needed. Heat stress symptoms, remedies, and monitoring are discussed in below sections. Cold exposure effects are discussed in below sections.

Workers are also encouraged to apply insect repellent and/or sunscreen as needed prior to field activities. Workers should exercise caution by visually inspecting their immediate area of activity for presence of poisonous/harmful plant, insect, and animal species as well as any hazard resulting from previous human activity.

5.5.1 Effects and Prevention of Heat Stress

If the body's physiological processes fail to maintain a normal body temperature because of excessive heat, a number of physical reactions can occur. They can range from mild symptoms such as fatigue, irritability, anxiety, and decreased concentration, dexterity, or movement, to death.

Heat-related health concerns can include the following:

Heat rash: Caused by continuous exposure to heat and humid air and aggravated by chafing clothes. Decreases ability to tolerate heat and is a nuisance.

Heat cramps: Caused by profuse perspiration combined with inadequate fluid intake and chemical replacement, particularly salts. Signs include muscle spasm and pain in the extremities and abdomen.

Heat exhaustion: Caused by increased stress on various organs to meet increased demands to cool the body. Signs include shortness of breath; increased pulse rate (120-200 beats per minute); pale, cool, moist skin; profuse sweating; dizziness; and lassitude.

Heat stroke: Is the most severe form of heat stress. Body must be cooled immediately to prevent severe injury and/or death. Signs include red, hot, dry skin; no perspiration; nausea; dizziness and confusion; strong, rapid pulse; and possibly coma. Medical help must be obtained immediately.

Medical attention must be obtained for the more serious symptoms of heat stress. One or more of the following methods are recommended to help reduce the potential for heat stress:

- Provide plenty of liquids. To replace body fluids (water and electrolytes) lost due to sweating, use a 0.1 percent saltwater solution, more heavily salted foods, or commercial mixes. The commercial mixes may be preferable for those employees on a low-sodium diet.
- Provide cooling devices to aid natural body ventilation. These devices, however, add weight, and their use should be balanced against worker efficiency.
- Wear long cotton underwear, which acts as a wick to help absorb moisture and protect the skin from direct contact with heat-absorbing protective clothing.
- Install mobile showers and/or hose-down facilities to reduce body temperature and cool protective clothing.
- In extremely hot weather, conduct non-emergency response operations in the early morning or evening.
- Ensure that adequate shelter is available to protect personnel against sun, heat, or other adverse weather conditions that decrease physical efficiency and increase the probability of accidents.
- In hot weather, rotate workers wearing protective clothing.
- Maintain good hygiene frequently changing clothing and showering daily. Clothing should be permitted to dry during rest periods. Workers who notice skin problems should immediately consult medical personnel.

5.5.2 Cold Exposure

Persons working outdoors in temperatures at or below freezing may suffer from cold exposure. During prolonged outdoor periods with inadequate clothing for protection, the effects of cold exposure may occur even at temperatures well above freezing. Cold exposure may cause severe injury due to freezing of exposed body surfaces (frostbite), or profound generalized cooling (hypothermia), possibly resulting in death. Areas of the body which have high surface area-to-volume ratios such as fingers, toes, and ears are the most susceptible to frostbite.

Local injury resulting from cold is included in the generic term frostbite. There are several degrees of damage. Frostbite of the extremities can be categorized into:

Frost nip or incident frostbite: characterized by sudden blanching or whitening of skin.

Superficial frostbite: skin has a waxy or white appearance and is firm to the touch, but tissue beneath is resilient.

Deep frostbite: tissues are cold, pale, and solid; extremely serious injury.

Systemic hypothermia, or lowering of the core body temperature, is caused by exposure to freezing or rapidly dropping temperatures. Symptoms are usually exhibited in five stages: 1) shivering and loss of coordination; 2) apathy, listlessness, sleepiness, and (sometimes) rapid cooling of the body to less than 95°F (35°C); 3) unconsciousness, glassy stare, slow pulse, and slow respiratory rate; 4) freezing the extremities; and 5) death.

5.6 DECONTAMINATION

Contactors and its subcontractors will maintain on-site decontamination equipment such as potable water,alconox and water reservoir tank. Groundwater, soil and soil vapor sampling, and drilling equipment will be decontaminated between each boring, well installation, sampling event, and prior to mobilization on or off site.

Decontamination of personnel will be conducted only in the unexpected event that contamination is detected. At a minimum, personnel who have conducted work at the site will wash their hands prior to eating or drinking. Contractors personnel will supervise, assist, and document incidents involving personnel contamination

5.7 EMERGENCY PREPAREDNESS/RESPONSE

The first worker who notices that a medical emergency or personal injury has occurred will immediately make a subjective decision as to whether the emergency is life threatening and/or otherwise serious.

Life-Threatening and/or Otherwise Serious Incident

If a life-threatening incident occurs, those persons recognizing the situation should do whatever actions in their capabilities to reduce the threat and then the SSHO will be contacted. The SSHO

will immediately notify the Emergency Medical Services (EMS) and implement emergency action procedures to have someone meet and guide EMS to the incident location.

The SSHO will be kept apprised of the situation and the location of the victim(s). As the SSHO proceeds to the accident scene, communications channels will be opened and kept on standby until the SSHO has surveyed the scene and performed a primary survey of the victim. The SSHO will provide emergency action guidance consistent with the injury and will relay the appropriate information to the site person meeting the EMS.

Depending on the nature of the injury and the location at which the injury occurred, the SSHO will determine whether the person can be moved or whether the EMS team will need to come into the work area to assist the victim. Should the victim be injured in the work zone, all appropriate life-saving methods will be exercised in that area before attempting decontamination (if required) of the victim. The extent of emergency decontamination performed will depend on the severity of the injury or illness and the nature of the contamination. If the emergency is such that emergency decontamination cannot be performed safely, the victim will be given necessary first-aid treatment and wrapped in a blanket prior to transportation by EMS.

If heat stress is a factor in a victim's injury/illness, all protective clothing will be removed from the victim immediately.

Non-Life-Threatening Incident

Should it be determined that no threat to life is present, a co-worker will assist the injured person and contact the SSHO as soon as reasonably possible. The SSHO will notify the Contractor of the incident. For all non-life threatening injuries, all medical assistance will be provided outside the work zone to reduce the spread of contamination to medical personnel or equipment.

All emergency services can be reached by dialing 911 from any facility or mobile telephone. Access to phones and/or radios will be provided to onsite personnel. The Emergency Response Coordinator (ERC) will coordinate all emergency response operations.

If an injury occurs at the site, the route to the hospital is shown in Figure 2. Emergency telephone numbers are given below.

EMERGENCY CONTACTS

Ambulance:	911
Police:	911
Fire Department:	911
Hospital:	911
G.C.Environmental, Inc, 22 Oak Street, Bay Shore, New York	(631) 206-3700
Nearby Hospital:	(718) 932-1000

Mount Sinai Hospital
25-10 30th Avenue
Long Island City, New York 11102

A hospital route map is presented in Appendix C.

6.0 TRAINING/MEDICAL REQUIREMENTS

6.1 SITE-SPECIFIC HAZARD COMMUNICATION AND ACCESS BRIEFING

Since different training requirements may be needed based on the nature of different tasks to be performed, specific training requirements may be identified. However, generally applicable training requirements are presented here. Visitors not entering any exclusion zone or contamination reduction zone who have very limited potential for exposure to contaminants require:

1. Site-specific hazard communication and access briefing.

- All project personnel performing hands-on work that could potentially expose them to hazardous substances, safety, or health hazards will meet the following training requirements:

2. General Employee Training (GET)

- 10 hour OSHA training, or equivalent (Note: for certain types of low risk work, 8 or 24 hour training is acceptable)
- Site-specific hazard communication and access briefing

Prior to beginning work at the project site, all personnel will review this Health and Safety Plan and sign the training acknowledgment form (Appendix C). The site-specific hazard communication and access briefing is documented in the project logbook. If site conditions change or other hazards are detected, the training and access requirements will be revised accordingly.

6.2 MEDICAL SURVEILLANCE

A medical surveillance program will be conducted in accordance with the requirements of 29 CFR 1910.120 for:

- All employees who are or may be exposed to hazardous substances or health hazards at or above the established permissible exposure limits or, if there is no permissible exposure limit, above the published exposure levels for these substances, without regard to the use of respirators, for 30 days or more a year.
- All employees who wear a respirator for 30 days or more a year or as required by 29 CFR 1910.134.
- All employees who are injured, become ill, or develop signs or symptoms due to possible overexposure involving hazardous substances or health hazards from an emergency response or hazardous waste operation.
- Members of HAZMAT teams.

All contractors' employees receive periodic medical examinations. Because of the low potential for exposure to hazardous agents, it is not expected that additional medical surveillance will be required for any personnel undertaking this project. If necessary, non-contractors personnel will be required to acknowledge coverage by a medical surveillance program sufficient to satisfy the requirements of 29 CFR 1910.120 (Appendix C).

7.0 COMMUNITY AIR MONITORING

Continuous monitoring will be required for all ground intrusive activities. Ground intrusive activities include, but are not limited to, soil borings and excavation or installation of any temporary groundwater monitoring wells (if necessary).

VOC Monitoring, Response Levels, and Actions

Volatile organic compounds (VOCs) will be monitored at the downwind perimeter of the immediate work area (i.e., the exclusion zone) on a continuous basis or as otherwise specified. Upwind concentrations will be measured at the start of each workday and periodically thereafter to establish background conditions. The monitoring work will be performed using a MultiRAE Photoionization Detector (PID). The PID will be calibrated once daily utilizing the factory-supplied and recommended calibration gas (isobutylene).

If the ambient air concentration of total organic vapors at the downwind perimeter of the work area or exclusion zone exceeds 5 parts per million (PPM) above background for the 15-minute average, work activities will be temporarily halted and monitoring continued. If the total organic

vapor level readily decreases (per instantaneous readings) below 5 PPM over background, work activities will resume with continued monitoring.

If total organic vapor levels at the downwind perimeter of the work area or exclusion zone persist at levels in excess of 5 PPM over background but less than 25 PPM, work activities will be halted, the source of vapors identified, corrective actions taken to abate emissions, and monitoring continued. After these steps, work activities will resume provided that the total organic vapor level at the downwind property line (within 50 feet of the exclusion zone), is below 5 PPM over background for the 15-minute average.

If the organic vapor level is above 25 ppm at the perimeter of the work area, activities must be shutdown.

All 15-minute readings will be recorded and be available for DEP personnel to review. Instantaneous readings, if any, used for decision purposes will also be recorded.

Suppression Measures

If field measurements indicate the necessity for VOC/odor control, the appropriate suppressant will be selected (e.g., environmentally-protective foam, water, etc.) to be applied. If required, odor suppressant will be applied utilizing a compressed-air power spray nozzle or garden hose (water).

As previously stated, continuous monitoring of the work zone and areas downwind will be conducted during field activities, as well as during any required suppression measures. Once acceptable levels are achieved, work will continue, along with the required community air monitoring.

8.0 G.C. ENVIRONMENTAL, INC. APPROVALS

This HASP has been prepared for the following project:

8-01 26th Avenue
Astoria, Queens, New York 11102
GCE Project Number: 13-256-00

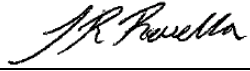

This HASP has been reviewed and approved by the following G. C. Environmental personnel:

11/13/13

Ravi Kumar Kolaventi
Site Supervisor

Date

11/13/13

TR Revella
Principal Investigator

Date

11/13/13

Gregory Collins
Site Safety and Health Officer

Date

APPENDIX A

CHEMICAL DESCRIPTIONS

CHEMICAL DESCRIPTIONS

The following general chemical descriptions are presented for chemicals that are of importance. Each chemical description includes physical and odor recognition characteristics, health effects associated with exposure, and exposure limits expressed as an eight-hour time weighted average (TWA). Provided are federal OSHA (“OSHA”) permissible exposure limits (PELs; located in 29 CFR 1910.1000).

Acenaphthene is a polycyclic aromatic hydrocarbon (PAH) consisting of naphthalene with an ethylene bridge connecting positions 1 and 8. It is a colorless solid. Coal tar consists of about 0.3% of this compound.

Phenanthrene is a polycyclic aromatic hydrocarbon composed of three fused benzene rings. The name *phenanthrene* is a composite of phenyl and anthracene. In its pure form, it is found in cigarette smoke and is a known irritant, photosensitizing skin to light. Phenanthrene appears as a white powder having blue fluorescence.

Naphthalene is an organic compound with formula C₁₀H₈. It is the simplest polycyclic aromatic hydrocarbon, and is a white crystalline solid with a characteristic odor that is detectable at concentrations as low as 0.08 ppm by mass.

Effects with Exposure:

Eyes: Moderate irritant. Contact with liquid or vapor may cause irritation.

Skin: Practically non-toxic if absorbed following acute (single) exposure. May cause skin irritation with prolonged or repeated contact. Liquid may be absorbed through the skin in toxic amounts if large areas of skin are exposed repeatedly.

Ingestion: The major health threat of ingestion occurs from the danger of aspiration (breathing) of liquid drops into the lungs, particularly from vomiting. Aspiration may result in chemical pneumonia (fluid in the lungs), severe lung damage, respiratory failure and even death. Ingestion may cause gastrointestinal disturbances, including irritation, nausea, vomiting and diarrhea, and central nervous system (brain) effects similar to alcohol intoxication. In severe cases, tremors, convulsions, loss of consciousness, coma, respiratory arrest, and death may occur.

Inhalation: Excessive exposure may cause irritations to the nose, throat, lungs and respiratory tract. Central nervous system (brain) effects may include headache, dizziness, loss of balance and coordination, unconsciousness, coma, respiratory failure, and death.

Chronic Effects and Carcinogenicity: PAH compounds have the potential to cause anemia and other blood diseases, including leukemia, after repeated and prolonged exposure. Exposure to light hydrocarbons in the same boiling range as this product has been associated in animal studies with systemic toxicity.

Medical Conditions Aggravated by Exposure: Irritation from skin exposure may aggravate existing open wounds, skin disorders, and dermatitis (rash). Chronic respiratory disease, liver or kidney dysfunction, or pre-existing central nervous system disorders may be aggravated by exposure.

Exposure Limits:

Components:

Naphthalene 10 ppm	Benzo pyrene 0.02 ppm
Benz (a) anthracene 0.02 ppm	Fluorene: no limits setup
Benz (b) fluoranthene 0.02 ppm	Acenaphthene: no limits setup

Phenanthrene

CAS Number: 85-01-8

What is phenanthrene?

Phenanthrene is one of a group of chemicals called polycyclic aromatic hydrocarbons, PAHs for short. PAHs are often found together in groups of two or more. They can exist in over 100 different combinations but the most common are treated as a group of 15. PAHs are found naturally in the environment but they can also be man-made. Phenanthrene is a colorless, crystal-like solid but can also look yellow. PAHs are created when products like coal, oil, gas, and garbage is burned but the burning process is not complete.

Very little information is available on the individual chemicals within the PAH group. Most of the information available is for the PAH group as a whole. Information specific to phenanthrene is included in this fact sheet when available.

What is phenanthrene used for?

Most of the PAHs are used to conduct research. Like most PAHs, phenanthrene is used to make dyes, plastics and pesticides, explosives and drugs. It has also been used to make bile acids, cholesterol and steroids.

How can phenanthrene enter and leave your body?

One of the most common ways phenanthrene can enter your body is through breathing contaminated air. It can get into your lungs when you breathe it. If you work in a hazardous waste site where PAHs are disposed, you are likely to breathe phenanthrene and other PAHs. If you eat or drink food and water that are contaminated

with PAHs, you could be exposed.

Exposure can also occur if your skin comes into contact with contaminated soil or products like heavy oils, coal tar, roofing tar or creosote where PAHs have been found. Creosote is an oily liquid found in coal tar and is used to preserve wood. Once in your body, the PAHs can spread and target fat tissues. Target organs include kidneys, liver and fat. However, in just a matter of days, the PAHs will leave your body through urine and feces.

How can you be exposed to phenanthrene?

You can be exposed to most PAHs in the environment, in your home and in the workplace. Because PAHs exist naturally in the environment, and they are man-made, you can be exposed in a number of ways. Fumes from vehicle exhaust, coal, coal tar, asphalt, wildfires, agricultural burning and hazardous waste sites are all sources of exposure.

You could be exposed to PAHs by breathing cigarette and tobacco smoke, eating foods grown in contaminated soil or by eating meat or other food that you grilled. Grilling and charring food actually increases the amount of PAHs in the food.

If you work in a plant that makes coal tar, asphalt and aluminum, or that burns trash, you can be exposed to PAHs. You can also be exposed if you work in a facility that uses petroleum or coal or where wood, corn and oil are burned.

What are the health effects of exposure to phenanthrene?

A number of PAHs have caused tumors in laboratory animals that were exposed to PAHs through their food, from breathing contaminated air and when it was applied to their skin. When pregnant mice ate high doses of a PAH (benzo(a)pyrene), they experienced reproductive problems. In addition, the offspring of the pregnant mice showed birth defects and a decrease in their body weight. Other effects include damage to skin, body fluids and the immune system which help the body fight disease. However, these effects have not been seen in humans.

What levels of exposure have resulted in harmful health effects?

There is no information available from studies on humans to tell what effects can result from being exposed to individual PAHs at certain levels. However, breathing PAHs and skin contact seem to be associated with cancer in humans. Animal studies showed that exposing mice to 308 parts per million (ppm) of PAHs (specifically benzo (a) pyrene) in food for 10 days (short term exposure) caused birth defects. Mice exposed to 923 ppm of benzo (a) pyrene in food for months developed problems in the liver and blood.

The U.S. Environmental Protection Agency has indicated that not enough information exists to classify phenanthrene as a cancer causing substance.

Where can I get more information?

Contact your state health or environmental department, or:

Agency for Toxic Substances and Disease Registry
Division of Toxicology
1600 Clifton Road, N.E., E-29
Atlanta, Georgia 30333

Naphthalene

CAS Number: 91-20-3

What is naphthalene?

Found naturally in fossil fuels like coal and oil, naphthalene looks like a white solid. It is produced when these fuels are burned and when tobacco or wood is burned. It has a strong odor that smells like tar or mothballs.

What is naphthalene used for?

Naphthalene is used to make products like moth balls that repel and keep moths away. It is also used to make dyes, leather goods, and insecticide.

How can naphthalene enter and leave your body?

Naphthalene can enter your body when you breathe contaminated air or eat and drink contaminated food and water. Once inside your body, it can damage the body's red blood cells. It also changes into other chemicals and leaves your body through urine in just a matter of days.

How can you be exposed to naphthalene?

You can be exposed to naphthalene from breathing contaminated air if you work in an industry that produces naphthalene. Examples of these industries include coal tar production, wood preserving, tanning, ink and dye production or an industry that burns wood, coal or oil. You can also be exposed to naphthalene from cigarette smoke in your home or business. If you work in a business that uses moth repellants, you

could also be exposed.

Although you can be exposed to naphthalene from eating or drinking contaminated food and water, these are not common sources of exposure. In fact, the amount of naphthalene found in food is not known. You can also be exposed if you touch clothes or blankets that have come into contact with naphthalene.

What are the health effects of exposure to naphthalene?

If you are exposed to large doses of naphthalene, your red blood cells could be damaged or destroyed. This condition is called hemolytic anemia. Children who eat mothballs made with naphthalene can damage their red blood cells. If you or a child show signs of being tired, decrease in or no appetite, and pale or yellow skin, these symptoms may indicate your exposure to naphthalene. Other symptoms of exposure include nausea, vomiting, diarrhea and blood in your urine. Eating or breathing naphthalene caused cataracts in some animals but it is not clear if it will have the same effect on humans. Cataracts can cloud your vision making it difficult to see.

The noses and lungs of mice exposed to naphthalene vapors for two years were inflamed and irritated.

Naphthalene is not considered a cancer-causing substance. While there aren't any studies on the effects of naphthalene on humans, naphthalene caused cancer in female mice but not the male mice. It did not cause cancer in male or female rats.

What levels of exposure can result in harmful health effects?

Animal studies showed that giving animals 2,300 parts per million (ppm) to 20,400 ppm of naphthalene in their food from 1 to 10 days (short-term) reduced the litters of pregnant female mice, caused death in mice, increased the liver weight in rats and caused cataracts in rabbits.

Rats exposed to 9,000 ppm of naphthalene for 9 weeks (long-term) had a change in their liver enzyme activity.

Acenaphthene

CAS Number: 83-32-9

What is acenaphthene?

Acenaphthene is one of a group of chemicals called polycyclic aromatic hydrocarbons, PAHs for short. PAHs are often found together in groups of two or more. They can exist in over 100 different combinations but the most common are treated as a group of 15. PAHs are found naturally in the environment but they can also be man-made. Acenaphthene looks like a white crystal-like solid. PAHs are created when products like coal, oil, gas, and garbage are burned but the burning process is not complete.

Very little information is available on the individual chemicals within the PAH group. Most of the information available is for the PAH group as a whole. Information specific to acenaphthene is included in this fact sheet when available.

What is acenaphthene used for?

Most of the PAHs are used to conduct research. Like most PAHs, acenaphthene is used to make dyes, plastics and pesticides. Acenaphthene has been found in cigarette smoke, in the exhaust from automobiles and in wood preservatives.

How can acenaphthene enter and leave your body?

One of the most common ways acenaphthene can enter your body is through breathing contaminated air. It can get into your lungs when you breathe it. If you live near or work in a hazardous waste site where PAHs are disposed, you are likely to breathe acenaphthene and other PAHs. If you eat or drink food and water that are contaminated

with PAHs, you could be exposed.

Exposure can also occur if your skin comes into contact with contaminated soil or products like heavy oils, coal tar, roofing tar or creosote where PAHs have been found. Creosote is an oily liquid found in coal tar and is used to preserve wood. Once in your body, the PAHs can spread and target fat tissues. Target organs include kidneys, liver and fat. However, in just a matter of days, the PAHs will leave your body through urine and feces.

How can you be exposed to acenaphthene?

You can be exposed to most PAHs in the environment, in your home and in the workplace. Because PAHs exist naturally in the environment, and they are man-made, you can be exposed in a number of ways. Acenaphthene has been detected in fumes from vehicle exhaust, coal, coal tar, and at hazardous waste sites. These are all sources of exposure.

Since acenaphthene has been found in cigarettes, you can be exposed by breathing cigarette and tobacco smoke. Exposure to other PAHs can occur by eating foods grown in contaminated soil or by eating meat or other food that you grilled. Grilling and charring food actually increases the amount of PAHs in the food.

If you work in a plant that makes coal-tar or that uses petroleum or coal, or makes or uses wood preservatives, you could be exposed to acenaphthene and other PAHs.

What are the health effects of exposure to acenaphthene?

A number of PAHs have caused tumors in laboratory animals that were exposed to PAHs through their food, from breathing contaminated air and when it was applied to their skin. When pregnant mice ate high doses of a PAH (benzo(a)pyrene) they experienced reproductive problems. In addition, the offspring of the pregnant mice showed birth defects and a decrease in their body weight. Other effects include damage to skin, body fluids and the immune system which helps the body fight disease. However, these effects have not been seen in humans.

What levels of exposure have resulted in harmful health effects?

Acenaphthene can bother your skin and mucous membranes. Animal studies showed that rats fed 2 grams of acenaphthene for 32 days (long-term) had changes in their blood and some damage to the liver, kidney and lungs.

There is no information available from studies on humans to tell what effects can result from being exposed to individual PAHs at certain levels. However, breathing PAHs and skin contact seem to be associated with cancer in humans. Animal studies showed that mice exposed to 308 parts per million (ppm) of PAHs (specifically benzo(a)pyrene) in food for 10 days (short-term exposure) had offspring with birth defects. Mice exposed to 923 ppm of benzo(a)pyrene in food for a period of months developed problems in the liver and blood.

APPENDIX C

HOSPITAL ROUTE MAP

ROUTE TO HOSPITAL

Driving Directions to Mount Sinai Hospital

Mount Sinai Hospital

25-10 30th Avenue

Long Island City, New York 11102

from 8-01 26th Avenue, Brooklyn, New York 11102:

1. Head northwest on 26th Avenue towards 4th Street (305 ft)
2. Take the 1st left onto 4th Street (0.1 mi)
3. Turn left onto 27th Avenue (469 ft)
4. Take the 1st right onto 8th Street (0.1 mi)
5. Turn left onto 30th Avenue (0.6 mi)
Destination will be on the left.
