DOCUMENT OF O

MUNICIPAL BOTTOMO, LONG DELAND CITY, NEW YORK, April 30, 1898.

How India Kana, Commissioner of School.

DEAR SIR-I have be honor to transmit honowith in accordance with section 1544, chapter 378, of the Laws of 1897, for your consideration, a statement of the transactions of the Department of Sewers, Borough of Queens, for the quarter ending March 31, 1898;

In addition to the work done by contractors, the Department has cleaned in the First Ward, insuen as Long Island City;
Cleaned 3,200 linear feet of sewers, 146 banks.
Examined 2,169 linear feet of sewers, 146 banks.
Examined 2,169 linear feet of sewers, 375 hasnes.
Repaired 37 basins.
Ser o basin heads, 4 manifole beauts.
Reset 3 manhole beads.
In the Second Ward, comprising the old Town of Newtown, 27 linear feet of sewer were built;
2 manhole beads and covers set. 2 manhole heads and covers set.
In the Third Ward, comprising the Town of Flushing, this Department has—

Cleaned (16 basins. Examined 600 linear feet of sewer, 152 bases.

Repaired 16 basins. Set 3 basin heats, 2 manhole heads and covers.

The Fourth Ward, formerly the Town of Jamaica, two separate and distinct systems exist; one for draming surface water and the other for house strainage. The surface ewer has been examined and found to be in fair condition. The house drainage system has not been completed and contract for same is now in litigation.

The Fifth Ward comprises the For Rockaway, Edgemere, Arverne and Rockaway sewers, This system is what is known as Chemical Preopitation in the For Rockaway District. The Disposal Station is located near the Bay. Into this station all of the sewage matter of the Village of For Rockaway runs, and is chemically treated. During the past quarter, at this station, 10,893,745 gallons of sewage matter were treated, the affiliant being turned into Jamaica Bay, and the shade, amounting to about 4co tens being dried and carted away by farmers.

The pumping capacity of the disposal works is 2,000,000 gallons daily. The amount of chemicals used was 1,700 pounds, together with 9 carboys of purchlocide of iron, 140 gallons of Rockland or imp lime, 50 ross of coal and 350 bags of sawdust.

A recent report has been rendered by Mr. Olin H. Landreth, Consulting Engineer of the State Board of Health, in relation to the stoppage of the emptying of the sewage matter of Arverne and Edgemere into Jamaica hay. This complaint could only be remedied by connecting the sewers of Arverne and Edgemere with the Far Rockaway Disposal Works. This would entail a large expenditure, and cover a distance of about four miles.

The total number of sewer permits issued was 103, of which 48 were issued at 52,50 each,

and 55 at 510.

In addition to the work done by the Department the following contractors, under old agree-ments, continue to fulfill their contracts as follows: Magnus Larsen, cleaning sewers and basins, former First Ward of Long Island City, \$85 per

month.

Louis T. Stevenson, former Second Ward at Long Island City, \$10 per month.
John Tallon, former routtle Ward of Long Island City, \$20 th per month.
James Tlerney, former Fifth Ward of Long Island City, \$20 per month.
L.B. Marrott, Whitestone, \$15 per month.
Herman Bememan, Callege Point, \$15 per month.

Mr. Johnson, the Engineer of this Department, informs me that from his examination of the Fluction sewage system, the sewers are in a very lad condition, the Myrile account sewer in particular. This sewer is of Cosmonrete Portland Common pipe. On Fabruary 2 a local was reported in the Myrile avenue sewer north of Taylor areas. When Taylor & Co. the matratum, were directed to repair the break, it was discovered that it was necessary to related out from all the sewer in a concrete gradle. Since the fluing of the break, other break and defects in this sewer have been reported at intervals, showing the sawer in in in a disquidated employing. I have at present under consideration, the break in the Breakland weeks, the complained of Walson avenue sewer under construction and the complaint of matter all the Eighth areas ower in the View Ward of the Borough of Queens. of the Borough of Queens.

DOCUMENT "II."

OFFICE, NEW BETTER OF L. Representation of New Yorks, April 1, 1898.

Hon. Janus Wank, Commissioner of Secure:

Data Six As required by action 1544 of the Charter, I berewith respectfully colonic de-tollowing report of the transactions of the branch of the Sewer Department, because in the Harangh of Richmond, for the quarter ending March 31, 1898.

Taking advantage of the opportunity which this report presents, I desire, before enturing upon the more detailed nork of transactions, to briefly outline for your information with for tuniversiting the sewerage of the Borough, to may be of rulas to the Main Office.

The sawer system in this forcough is exclusively the so-called "exparate system," providing only, however, having been made for that portly of the system which death with sewerage proper, the storm water not being provided for, with the rough that in the thickly sottled portly of the northern and extern shore of the Island there are four important dromas, which seriously damage, at trequent intervals, the highways and private improvements located and districts. They are conducted to their outfall through open trenches, highway guitars and made shift outberrs, which have nother the capacity, alignment or grade for the necessation of side domain damage, and in the dry and warm season they are open districts, damperous to the and limb, and period, and in the dry and warm season they are open districts, damperous to the and limb, and period harbors for the development, patriffective term intation and the liberation of grade limb and the liberation of the recessaries.

Storm-water severs should be built at an early date, and, in view of the fact that a sessingents have already been levied for the house severage lines, the cust of their construction should be an provided for, as to avoid unnecessary burdens for those already succeed.

The sowers of the Barough are located, for the most part, on the thickly populated districts of the Island. There is, however, in course of construction in the Firsh Ward of this Barough, about five miles of sewer (Separate system).

An examination of the sewers leads to the following conclusions :

A detailed statement of the transactions is as follows:

First—That so far as grade relations for the purposes of receiving from and delivering to, the literaugh is without a sowerage system, it having a series of independent conduits.

Second—That the illushing of the sewers is for a large part imperfectly accomplished; in many instances the necessary flesh tanks are other mining or so badly out of repair as to preclude the possibility of entirely perfecting the deliciencies of the system from the moneys appropriated for the

The absence of systematic dashing will prove an expensive drain upon our appropriation for "Sewers—Repairing and Cleaning," and I would respectfully request that the marms last of the legal right of the Department to have flush tanks constructed where necessary, and not becausing, and lookave the cost assessed against the property benefitted.

The work of the Department during the quarter has considered of organizing the forces, collection of documents and contracts irons the various village governments heretoine contracting for sewer work, the preparation of effice plans and the collection of information bearing upon the present condition of the sewers, the issuing of permits for sewer connections, the cleaning and repuls and rehabiliting of sewer basins, the opening up of clogged flush ranks, and schulding of manhales, the supervision of the sewer construction work now being prosecuted in the Fifth Ward of the Borough, together with the care of the correspondence, both departmental and local, incidental to the conduct of public business in the Sewer Department of the Borough.
