**NYC OFFICE OF EMERGENCY MANAGEMENT ADVISES RESIDENTS TO USE
CAUTION DURING PERIOD OF HIGH WIND IN NEW YORK CITY**

The New York City Office of Emergency Management (OEM) is advising residents of a high wind warning that has been issued by the National Weather Service (NWS) for New York City from 9 a.m. Thursday to 12 a.m. Friday. Winds of 25 to 35 mph are expected this morning with gusts over 40 mph. Sustained winds will increase by afternoon to near 40 mph with gusts in excess of 58 mph expected. High winds and gusty conditions will last through the evening hours.

Wind speeds are increased dramatically as gusts push through narrow city streets between tall buildings, a phenomenon known as the "urban canyon effect."

Winds of this magnitude have the potential to bring down trees, power lines, scaffolding, signs and awnings, and can turn unsecured objects into dangerous projectiles. To prevent damage and injury, bring loose items indoors, and fully secure outdoor objects.

In advance of any storm, be sure your property is secure. Remove any dead trees or overhanging branches near structures, loose roofing materials and objects in yards, patios, roofs or balconies that could blow away.

Strong winds can make driving difficult, especially for those driving high profile vehicles and anyone driving across bridges and overpasses. Maintain a firm grip on the wheel and keep a safe distance between vehicles.

After a high wind advisory or high wind warning is issued residents should take the following precautions:

- Take shelter.
- Tune in to local weather forecasts and bulletins issued by the National Weather Service on local TV and radio stations.
- Shutter windows securely and brace outside doors.
- Bring in unsecured objects from patios and balconies and secure outdoor objects such as lawn furniture or garbage cans that could blow away and cause damage or injury.

Safety Tips

The safest place to during high winds is indoors. Postpone outdoor activities if a wind advisory or high wind warning has been issued.

If you are caught outside during high winds:

- Take cover next to a building or under a shelter.
- Stand clear of roadways or train tracks, as a gust may blow you into the path of an oncoming vehicle.
- Use handrails where available on outdoor walkways and avoid other elevated areas such as roofs without adequate railing.
- Watch for flying debris. Tree limbs may break and street signs may become loose during strong wind gusts. Keep an eye toward nearby balconies for loose objects that may fall.

In the event of a downed power line:

- Call for help. Report downed lines to your local utility emergency center and to the police. Do not try to free lines or to remove debris yourself.
- Avoid anything that may be touching downed lines, including vehicles or tree branches. Puddles and even wet or snow-covered ground can conduct electricity in some cases. Warn others to stay away.
- If you see someone who has been shocked who may be in direct or indirect contact with a power line, do not try to touch them. You may become a second victim. Get medical attention as quickly as possible by calling 911.
- If a line falls on your car, stay inside the vehicle. Take care not to touch any of the metal frame of your vehicle. Honk your horn, roll down the window and warn

anyone who may approach of the danger. Ask someone to call the police. Do not exit the car until help arrives, unless it catches on fire. To exit, open the door, but do not step out. Jump, without touching any of the metal portions of the car's exterior, to safe ground and get quickly away.

If you are driving:

- Keep both hands on the wheel and slow down.
- Watch for objects blowing across the roadway and into your path.
- Keep a safe distance from cars in adjacent lanes as strong gusts could push a car outside its lane of travel.
- Take extra care in a high-profile vehicle such as a truck, van, SUV, or when towing a trailer, as these are more prone to be pushed or even flipped by high wind gusts.
- If winds are severe enough to prevent safe driving, get onto the shoulder of the road and stop, making sure you are away from trees or other tall objects that could fall onto your vehicle. Stay in the car and turn on the hazard lights until the wind subsides.

OEM will continue to closely monitor the wind storm's progress and advise residents of any further safety measures. For more information, or to receive a copy of "Ready New York," New Yorkers can log on to NYC.gov or call 311.
