ENGINEER-IN-CHIEF'S QUARTERLY REPORT ENDING DECEMBER 31, 1901.

To the Commissioner of Docks:

Sir—I have the honor to submit the following report of work done under my charge and supervision for the quarter ending December 31, 1901:

Breakwater at Pier "A," North River.

Under resolution of the Board of Docks, dated January 16, 1900, the work of constructing a permanent breakwater south of Pier "A" has been in progress. The plan of using upper course concrete blocks having been abandoned, concrete has been placed in situ in forms substituted therefor. Two timber forms have been set on the section running south from Pier "A," and one small triangular form on piles to make shore connection at the east end running along Pier "A." In addition to this one large timber form was set on the island section on the piles, the bottom of this last form being about fifteen feet below low water. All these forms were weighted with concrete in the corners before being set. The forms in the section running south from Pier "A" have been filled with concrete from top of the blocks to a level of about 2½ feet below low water. A gravel concrete was then floated off over the concrete in situ to make an even bed for the A B course of granite. One hundred and seventy-two linear feet of granite face work, comprising all the courses from A B to E in full, have been set and backed up with concrete. Sixty-four linear feet of section of wall having concrete face was completed. Three hundred and sixty-two linear feet of coping was set and backed up with concrete. Broken stone has been filled in between the coping for a length of 100 feet. A conduit pipe for electric wires and gas pipes has been laid between the coping for the length of 100 feet, and two concrete manholes have been built around same. For all these purposes 946 batches of concrete and 112 batches of mortar were mixed and placed by the ten-ton derrick. In all, the new wharfage room made at the breakwater during the quarter amounts to 90 linear feet.
