**RE: Monthly Water Quality Report for February 2020**

Dear Ms. Huang, Mr. Palmer and Ms. Lynch:

Enclosed, please find the New York City Water Quality report for the month of February 2020. There was no well pumpage to distribution in the Groundwater System this month. Croton water was not feeding into distribution for the month of February 2020. In addition to the following list of compliance reports, a disc of electronic files containing compliance and non-compliance data for this month is enclosed with this report.

- Raw Water Fecal Coliform Report
- Raw Water Turbidity Report
- Distribution Microbiological Compliance Reports
  - Summary
  - Positive Samples
  - Resamples
- Chlorine Residual Reports
  - Entry Point Online
  - Entry Point Daily Minimum
  - Heterotrophic Plate Count
  - Monthly Summary
- Distribution Turbidity Reports
  - Distribution Turbidity Report
  - Source Water > 1.49 NTU Table
- Color Entry Point Report
- Fluoride Reports

- Fluoride Entry Point Report
- Distribution Fluoride Report
- Quarterly Disinfection By-products Report

The reports are summarized as follows:

## FAD REQUIREMENTS

### **1. Raw Water Fecal Coliform Concentrations (Section 141.71(a)(1)):**

**Requirements met.** The Delaware Aqueduct effluent from Kensico Reservoir exhibited fecal coliform concentrations in water prior to disinfection at levels less than or equal to 20 CFU/100 mL in at least 90% of the samples collected in the six-month period from September 1, 2019 to February 29, 2020. The six month running percentage of samples collected with fecal coliform concentrations >20 CFU/100 mL was 0.00% for the Catskill/Delaware System for this time period.

### **2. Raw Water Turbidity (Section 141.71(a)(2)):**

**Requirements met.** The raw water leaving Kensico Reservoir via the Delaware Aqueduct in compliance samples collected at DEL18DT, just prior to disinfection, exhibited turbidity levels less than or equal to 5 NTU on an ongoing basis during the month. The highest reported turbidity value was 1.0 NTU on the Catskill/Delaware System for the month. Please note, on the morning of February 22, the Delaware Aqueduct was shutdown from 12:00 AM to 5:46 AM to enable the replacement of chlorine solution line piping in Shaft 18.

### **3. Entry Point Chlorine Residual (Section 141.71(b)(1)(iii) and 141.72(a)(3)):**

**Requirements met.** As required, continuous monitoring for free chlorine residual was maintained at the distribution entry points throughout the month and at no time did the concentration fall below 0.2 mg/L for more than four hours. The minimum daily free chlorine residual value for entry point readings for the Catskill/Delaware System from sites 1S03 (Tunnel 1) was 0.44 mg/L, 1S03A (Tunnel 2) was 0.64 mg/L, and 1S03B (Tunnel 3) was 0.51 mg/L.

The Croton Filtration Plant was offline and thus there was no operational Croton entry point for the month of February.

### **4. Distribution System Disinfection Residuals (Section 141.71(b)(1)(iv) and 141.72(a)(4)):**

**Requirements met.** All free chlorine residuals measured at compliance sites within the distribution system during the month were greater than or equal to 0.01 mg/L.

A total of 1254 distribution samples were tested for free chlorine residual this month. For all monthly distribution sites free chlorine residual ranged from 0.01 to 0.97 mg/L, and averaged 0.55 mg/L.

**5. Trihalomethane Monitoring / HAA5 Monitoring (Section 141.71(b)(6)):**

**Requirements met.** The System's TTHM System-Wide Running Average (RAA) for the first quarter of 2020 was 41 µg/L, and the Locational Running Annual Averages (LRAA) ranged from 30 µg/L to 49 µg/L. These values meet the MCL of 80 µg/L for LRAA and RAA. TTHM quarterly results averaged 26 µg/L.

The System's HAA5 RAA for the first quarter of 2020 was 38 µg/L, and the LRAA ranged from 35 µg/L to 43 µg/L. These values meet the MCL of 60 µg/L for LRAA and RAA. HAA5 quarterly results averaged 42 µg/L.

**6. Total Coliform Monitoring (Section 141.71(b)(5)):**

**Requirements met.** The results of monthly coliform monitoring performed in the distribution system are enclosed. A total of 767 compliance samples were tested for total coliform during this period. HPC were all  $\leq$ 500 CFU/mL, equivalent to a measurable free chlorine residual. Zero percent of the samples had an undetectable free chlorine residual or HPC  $>$ 500 CFU/mL. This meets the requirements that a free chlorine residual be maintained at representative points in the distribution system, and that no more than 5% of the free chlorine residual samples be undetectable in any two months. During the month, there were no samples that tested positive for total coliform, and all samples were negative for *E. coli*.

**OTHER WATER QUALITY MONITORING****7. Microbiological Monitoring:**

Coliform monitoring at distribution sites near first service connections, in response to source water having a turbidity  $>$ 1.49 NTU, was not required this month, but all of these samples were negative for total coliform and *E. coli*.

The analyses of 486 distribution Operational samples resulted in no samples testing positive for total coliform. No *E. coli* were detected.

The analyses of 232 Pre-Finished samples resulted in no samples testing positive for total coliform. No *E. coli* were detected.

The analyses of 452 Autosampler Pre-finished samples resulted in one (1) sample testing positive for total coliform. No *E. coli* were detected.

**8. Distribution Turbidity Monitoring:**

For distribution sites, turbidity ranged from 0.43 to 1.83 NTU and averaged 0.72 NTU for the month. This meets the MCL of 5 NTU for the monthly average of all distribution samples.

**9. Color Monitoring:**

The MCL of 15 units for color was met at each Catskill/Delaware entry point for the month. Daily analyses of entry point samples (87 samples in total), produced monthly average color value of six (6) units for sites 1S03 (Tunnel 1) and 1S03B (Tunnel 3), and seven (7) units for site 1S03A (Tunnel 2).

**10. Volatile Organic/TTHM/HAA5 Monitoring:**

**Monthly Results:** Twenty-five (25) distribution and three (3) entry point samples were analyzed for volatile organic contaminants (VOC). All VOC were below detection in samples from distribution sites and entry points except for t-butyl alcohol that initially was qualitatively detected in two distribution samples but was not detected in their resamples. Twenty-five (25) TTHM distribution samples were analyzed ranging from 13 µg/L to 44 µg/L. Three (3) TTHM entry point samples were analyzed ranging from 12 µg/L to 23 µg/L. Twenty-three (23) HAA5 distribution samples were analyzed ranging from 28 µg/L to 48 µg/L. Three (3) HAA5 entry point samples were analyzed ranging from 25 µg/L to 38 µg/L.

**11. Semivolatile and Other Organic Chemicals/parameters:**

Quarterly monitoring for two compounds 1,2-Dibromo-3chloropropane and 1,2-Dibromoethane by EPA Method 524.3 SIM, determination of microextractables, was conducted at five (5) entry points including the Croton Low Service and High Service (1SCL1 and 1SCH3), which were receiving Catskill/Delaware water, on February 24, 2020. All sites were below detection.

**12. Fluoride Monitoring:**

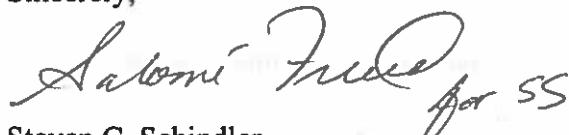

Daily analyses of entry point samples (87 samples in total), produced monthly average fluoride level of 0.73 mg/L for sites 1S03 (Tunnel 1), 1S03A (Tunnel 2), and 1S03B (Tunnel 3). The fluoride levels at the entry points did not exceed the MCL of 2.2 mg/L at any time during the month.

**13. Other Monitoring:**

Monitoring for Taste and Odor (T&O) compounds Geosmin and 2-Methylisoborneol (MIB) was conducted in February on eight (8) samples from the New Croton Reservoir. Results ranged from ND to 7.2 ng/L for Geosmin and from 23 ng/L to 39 ng/L for MIB. Contract laboratory reports of available data are included as pdf files on the disc of electronic files enclosed with this report.

Please feel free to contact me at (845) 340-7701 if you would like to discuss any of this information in greater detail.

Sincerely,

Steven C. Schindler  
Director, Water Quality

***TABLE OF CONTENTS FOR CD FILES***

## February 2020 Monthly Water Quality Report

### Microbiological Reports:

Summary of Coliform Compliance Samples

Coliform Positive Compliance Samples

Coliform Resample for Positive Compliance Samples

Summary of Coliform Operational Samples

Coliform Positive Operational Samples

Coliform Resample for Positive Distribution Operational Samples

Distribution Coliform Monitoring when Source Water Turbidity exceeds 1.49 NTU

All Microbiological Results

### Free Chlorine Residual (FCR) Reports:

Entry Point FCR On-Line Monitoring Results

Daily Minimum FCR at Entry Points

FCR and Heterotrophic Plate Count (HPC) Compliance Samples

FCR and HPC of Operational Samples

Summary of FCR of Distribution Samples (Monthly)

FCR of all Distribution Sites

### Turbidity Reports:

Summary of Turbidity of Distribution Samples

Turbidity of all Distribution Sites

### Color Reports:

Color for Entry Point Samples

### Fluoridation Reports:

Summary of Fluoride Levels of Distribution Samples

Fluoride Daily Entry Point Report for Surface Water Systems

Fluoride of all Distribution Sites

### Volatile Organic Contaminant (VOC) and Disinfection By-products (DBP) Reports:

Total Trihalomethanes (TTHM) & VOC Monthly Report

Microextractables of EPA Method 524.3/SIM Report

Summary of EPA DBP Quarterly Report

Haloacetic Acids (HAA5) Monthly Report

Taste & Odor Sampling Reports from EEA Lab

..: Aqueduct Shutdown, CONF: Confluent Growth (+ indicates positive coliform growth), LE: Lab Error, FE: Field Error,  
E: estimated count based on non-ideal plate, >=: plate count may be biased low based on heavy growth, >: observed count replaced with  
dilution based value

1. Does a raw water turbidity M & R violation exist?  Yes X  No
2. Does the turbidity reading exceed 5 NTU at any time?  Yes X  No  
*If yes, check for MCL violation, and notify state by the end of the next business day.*
3. Minimum number of microbiological samples required per week: 5
4. A daily microbiological sample is required every day the raw water turbidity exceeds 1 NTU.

Additional Comments: On 2/22, there was a short-term shutdown of the Delaware Aqueduct in support of Delaware chlorine solution pipeline replacement.

Bureau of Water Supply**

## **City Tunnel Entry Point Residual Chlorine Continuous Monitoring Results**

**Note:** Continuous monitoring of free chlorine residual (FCR) at distribution entry points was maintained. FCR was maintained at or above 0.2 ppm at all times. Since 11/3/19, all online readings, grab and online dial-up readings were recorded in Eastern Standard Time.

				44	QUARTERLY MAXIMUM		48		
				26	QUARTERLY AVERAGE		42		
				41	SYSTEM-WIDE RAA		38		
					HAA5				

(a) : analyzed by EPA Method 524.3

(b) : analyzed by EPA Method 552.3

LRAA: The Locational Running Annual Average (LRAA) is calculated by taking the value of this quarter and the three previous consecutive quarters.

RAA: The System-wide Running Annual Average (RAA) is calculated by taking the average of the Quarterly Average of this quarter and the three previous consecutive quarters.

OEL: The Operational Evaluation Level (OEL) is calculated by averaging 2 times this quarter's value and the two previous consecutive quarters.

Both the LRAA and the System-wide RAA is not to exceed 80 µg/L for TTHM and 60 µg/L for HAA5.
