TO THE PEOPLE OF THE CITY OF NEW and custodian of the many and immense interests in-volved in the City's water supply, to briefly present to the people of the City the present condition of the supply, and the extreme necessity for care and economy in the use of the water. For a number of years past and up to the present time, the old Aqueduct and the Bronx river conduit have delivered in the City all the water which they are capable of carrying, the supply thus remaining station-ary when the City has been constantly growing in popu-lation, buildings, manufactures and commerce, creating new and additional demands upon the water service. The consequence is that at certain seasons of the year, not-ably in extreme cold weather, when the habit of wasting water from faucets to prevent freezing in the pipes pre-vails, and in warm and dry weather, when various methods of waste are in vogue, the daily consumption exceeds the supply which can by any possibility be received through the old Aqueduct and the Bronx river conduit, the excess of consumption being drawn from the city reservoirs, diminishing the depth of water and the pressure in the distributing mains. There is no possi-bility of increasing the water supply received in the City until the new Aqueduct is brough the city is care Afready the depth of water in the reservoirs is being diminished at the rate of one inch per day, and if this should continue for any length of time, the pressure in the distributing mains would be so reduced that it would be impossible to deliver water in housands of users located on high ground, and in some other locations even in the basements or cellars. Therefore, most earnestly appeal to all citizens, residents and people carying on business in this city to be care
