The work of clearing away the blasted masonry at the core wall, running south, and on the wing wall was also in progress. The total amount of debris removed from both core wall and wing wall up to June 20 was in the neighborhood of 1,500 cubic yards, of which approximately 400 cubic yards were removed during the week. Earth excavation in the side hill at the south end of the dam continued night and day with the steam shovel, a new cut having been started and partially completed above elevation 100 feet and running from above through the core wall to the down stream side. The total amount of material removed from the hillside by the steam shovel was about 12,500 cubic yards up to June 20, of which approximately 4,300 cubic yards were removed during the week.

Yours truly, WM. H. TEN EYCK, President.

WILLIAM H. TEN EYCK, Esq., President, Aqueduct Commission, 280 Broadway, New York:

Sin-My engagements are such that I can only occasionally be present at the meetings of the Aqueduct Commission. In the meanwhile, I am exceedingly interested in the progress of the work at the Croton Dam. I need not point out to you how important it is that this dam should be completed at as early a day as possible, nor how great is the danger of delay involved in the changes of construction authorized not long ago. I shall be obliged, therefore, if you will give instructions to have sent to me weekly, a report of the work actually done, in two parts: (1) Towards the completion of the stone work of the dam already under way, and (2) as to the demolition of the core-wall and the work of replacing it. If these reports could be accompanied by dated photographs, I should be pleased. I want the contractors to

understand that I am personally interested in noting the progress of the work, from

Respectfully, SETH LOW, Mayor.

New York City:

Dear Sir—We are in receipt of your letter of June 26, transmitting copy of letter received from Mayor Low, under date of June 3, 1902, and in reply thereto we would say that we have carefully noted the wishes of the Mayor as expressed in his communication, as well as your own added solicitation in line with his suggestions.

Considering the short time we have had to organize our forces for the work in land, we are, we think, making excellent progress. We are employing every practicable means and exerting every effort to push and expedite our work, and we feel confident that the rate of progress, as will be shown by the views which you will take from time to time, will be deserving of the Mayor's commendation.

Yours very respectfully.

COLEMAN, BREUCHAUD & COLEMAN.

I desire to call your attention to these facts, and to request that you take immediate steps to provide a sufficient and adequate plant and the number of men necessary for the proper conduct of the work of building the Muscoot Dam, and that the progress of the work be facilitated by you in every way possible.

Appeal No. 206 of 1002, New Building No. 159 of 1002, premises No. 14 East Sixtieth street, Raleigh C. Gildersleeve, Esq., architect and appellant.

First—To allow the construction of a pent house upon the roof of said structure without conforming to section 105 of the Building Code as to fireproofing of buildings over 150 feet or twelve stories in height.

2d. To permit the front (north) wall of said pent house to be constructed of a inch terra cotta blocks built in between angle iron uprights, and covered with galvanized iron, for the reason that said wall does not face upon any street, court or party line and is fully as good as a 12-inch brick wall, which would impose an unnecessary load upon the steel frame below.

It is desired to build the walls of the building with thicknesses according to the requirements of section 31 of the Building Code, and not section 32, upon the ground that the building, being intended for a fire-engine house, is above the first story nothing more than a dormitory, and cannot properly be classed as a stable, as the upper floors are not intended for horses.

On motion duly made and seconded, approved.

It is desired to place a pent house on the roof of the building in question, covering about one-fifth of the area of the roof, without having this pent house considered as a complete extra story.

The construction of this pent house to be as follows: All walls surrounding the pent house will be carried up to their proper height; floor will be made of cement; wire glass will be used wherever glass is necessary; proper skylights will be provided; all work for the window frames, sash, doors, trim and base of the pent house will be thoroughly fireproof; the highest point of the roof will not exceed 150 fact from the curh level; all woodwork entering into the construction of the pent house will be fireproofed by the process which is fully accepted and approved by the Bureau of Buildings; the entire pent house will be constructed absolutely fireproof. Inasmuch as the highest point of this building will be kept within the 150 foot limit, and the percentage of roof area covered by pent house is small. I respectfully ask that this case be considered by your honorable Board and the modification as above set forth be granted.

B. The building is strictly fireproof. The stairs and elevators are inclosed in fireproof partitious, with metal covered doors and trim. Two fire lines, with hose and other auxiliary fire apparatus will be provided. An automatic sprinkler system is also included in the protection against fire.

C. That the building will not contain a large number of people, and as planned is adequately provided with stairs, and an additional flight would not be of any particular advantage.

D. An outside stairs or fire escape will be provided. Mr. W. B. Bamford appeared in explanation. On motion, duly made and seconded, approved.

Considering that building does not exceed 60 feet in height, that brick work will be laid in mortar, Rosendale cement one part, lime one part and sand three parts, and that Goetz box anchors, with covers, will be built in piers for girder bearings, the Board is hereby petitioned to approve the amendments.

In this building it is proposed to run two iron girders to carry floor beams; there will be a fireproof partition separating the apartments, not alone for the span 26 feet, but the entire length to the fireproof halls, making each apartment separate, and dividing it so that each is shut off by a fireproof partition. As this construction is fully as good as a brick wall, the beams being amply strong to carry the floor loads, and as this partition is absolutely fireproof, I respectfully petition the Board to be allowed to proceed with the same.

The assessors reported that the cost of the retaining wall built along the east side of the avenue abutting the railroad company's yards had been charged to the railroad company.
