RE: Monthly Water Quality Report for September 2020

Dear Ms. Huang, Mr. Palmer and Ms. Lynch:

Enclosed, please find the New York City Water Quality report for the month of **September 2020**. There was no well pumpage to distribution in the Groundwater System this month. Croton water was not feeding into distribution for the month of September 2020. In addition to the following list of compliance reports, electronic files containing compliance and non-compliance data for this month are being emailed to you.

- Raw Water Fecal Coliform Report
- Raw Water Turbidity Report
- Distribution Microbiological Compliance Reports
 - Summary
 - Positive Samples
 - Resamples
- Chlorine Residual Reports
 - Entry Point Online
 - Entry Point Daily Minimum
 - Heterotrophic Plate Count
 - Monthly Summary
- Distribution Turbidity Reports
 - Distribution Turbidity Report
 - Source Water > 1.49 NTU Table
- Color Entry Point Report

- Fluoride Reports
 - Fluoride Entry Point Report
 - Distribution Fluoride Report
- Quarterly Disinfection By-products Report

The reports are summarized as follows:

FAD REQUIREMENTS

1. Raw Water Fecal Coliform Concentrations (Section 141.71(a)(1)):

Requirements met. The Delaware Aqueduct effluent from Kensico Reservoir exhibited fecal coliform concentrations in water prior to disinfection at levels less than or equal to 20 CFU/100 mL in at least 90% of the samples collected in the six-month period from April 1, 2020 to September 30, 2020. The six month running percentage of samples collected with fecal coliform concentrations >20 CFU/100 mL was 1.09% for the Catskill/Delaware System for this time period.

2. Raw Water Turbidity (Section 141.71(a)(2)):

Requirements met. The raw water leaving Kensico Reservoir via the Delaware Aqueduct in compliance samples collected at DEL18DT, just prior to disinfection, exhibited turbidity levels less than or equal to 5 NTU on an ongoing basis during the month. The highest reported turbidity value was 0.95 NTU on the Catskill/Delaware System for the month.

3. Entry Point Chlorine Residual (Section 141.71(b)(1)(iii) and 141.72(a)(3)):

Requirements met. As required, continuous monitoring for free chlorine residual was maintained at the distribution entry points throughout the month and at no time did the concentration fall below 0.2 mg/L for more than four hours. The minimum daily free chlorine residual value for entry point readings for the Catskill/Delaware System from sites 1S03 (Tunnel 1) was 0.59 mg/L, 1S03A (Tunnel 2) was 0.92 mg/L, and 1S03B (Tunnel 3) was 0.62 mg/L.

The Croton Filtration Plant was offline and thus there was no operational Croton entry point for the month of September.

4. Distribution System Disinfection Residuals (Section 141.71(b)(1)(iv) and 141.72(a)(4)):

Requirements met. All free chlorine residuals measured at compliance sites within the distribution system during the month were greater than or equal to 0.01 mg/L, except for one sample that equaled 0.0 mg/L.

A total of 1209 distribution samples were tested for free chlorine residual this month. For all monthly distribution sites free chlorine residual ranged from 0.00 to 1.22 mg/L, and averaged 0.63 mg/L.

The third quarter of 2020 chlorine residual running annual average was 0.58 mg/L. This meets the MRDL of 4 mg/L for the quarterly running average of all systems samples.

5. Trihalomethane Monitoring / HAA5 Monitoring (Section 141.71(b)(6)):

Requirements met. The results for the third quarter of 2020 were included in the report dated September 10, 2020 (for the August 2020 reporting period).

6. Total Coliform Monitoring (Section 141.71(b)(5)):

Requirements met. The results of monthly coliform monitoring performed in the distribution system are enclosed. A total of 819 compliance samples were tested for total coliform during this period. HPC were all ≤ 500 CFU/mL, equivalent to a measurable free chlorine residual. Zero percent of the samples had an undetectable free chlorine residual or HPC > 500 CFU/mL. This meets the requirements that a free chlorine residual be maintained at representative points in the distribution system, and that no more than 5% of the free chlorine residual samples be undetectable in any two months. During the month, seven (7) samples tested positive for total coliform, and all samples were negative for *E. coli*.

- A sample collected on 09/11/2020 from Site 20850 (sample station east side Union Ave, first sampling station north of Frost St, in front of 568 Union Ave, Brooklyn) was positive for total coliform. Resampling on 09/13/2020 was coliform negative at all locations.
- A sample collected on 09/11/2020 from Site 24250 (sample station west side of 20th Ave, first sample station south of 58th St, Brooklyn) was positive for total coliform. Resampling on 09/13/2020 was coliform negative at all locations.
- A sample collected on 09/15/2020 from Site 41350 (sample station west side Menahan St, first sample station north of Onderdonk Ave, Queens) was positive for total coliform. Resampling on 09/17/2020 was coliform negative at all locations.
- A sample collected on 09/24/2020 from Site 79150 (sample station in front of 127-11 east side Farmers Blvd, Queens) was positive for total coliform. Resampling from the downstream location (sample station east side of Farmers Blvd, third sample station north of Merrick Blvd) on 09/26/2020 was positive for total coliform. Resampling on 09/28/2020 was coliform negative at all locations
- A sample collected on 09/27/2020 from Site 16150 (sample station west side Bronxdale Ave, 2nd sample station south of Rhinelander Ave, Bronx) was positive for total coliform. Resampling on 09/29/2020 was coliform negative at all locations.
- A sample collected on 09/27/2020 from Site 39950 (sample station in front of 601 west side West End Ave, Manhattan) was positive for total coliform. Resampling on 09/29/2020 was coliform negative at all locations.

OTHER WATER QUALITY MONITORING**7. Microbiological Monitoring:**

Coliform monitoring at distribution sites near first service connections, in response to source water having a turbidity > 1.49 NTU, was not required this month, but all of these samples were negative for total coliform and *E. coli*.

The analyses of 390 distribution Operational samples resulted in three (3) samples testing positive for total coliform. No *E. coli* were detected.

The analyses of 240 Pre-Finished samples resulted in nineteen (19) samples testing positive for total coliform and one (1) for *E. coli*.

The analyses of 596 Autosampler Pre-finished samples resulted in thirty-four (34) samples testing positive for total coliform and one (1) for *E. coli*.

8. Distribution Turbidity Monitoring:

For distribution sites, turbidity ranged from 0.43 to 1.92 NTU and averaged 0.66 NTU for the month. This meets the MCL of 5 NTU for the monthly average of all distribution samples.

9. Color Monitoring:

The MCL of 15 units for color were met at each Catskill/Delaware entry point for the month. Daily analyses of entry point samples (90 samples in total), produced monthly average color value of seven (7) units for sites 1S03 (Tunnel 1), 1S03A (Tunnel 2), and 1S03B (Tunnel 3).

10. Volatile Organic/TTHM/HAA5 Monitoring:

Monthly Results: Twenty (20) distribution and three (3) entry point samples were collected for volatile organic contaminant (VOC) analysis. All VOC samples from distribution sites and entry points were below detection. Twenty (20) TTHM distribution samples were collected ranging from 37 µg/L to 71 µg/L. Three (3) TTHM entry point samples were collected ranging from 32 µg/L to 49 µg/L. Twenty (20) HAA5 distribution samples were collected ranging from 18 µg/L to 54 µg/L. Three (3) HAA5 entry point samples were collected ranging from 32 µg/L to 39 µg/L.

11. Semivolatile and Other Organic Chemicals/parameters:

EPA Method 525.3 monitoring for 112 compounds of specified and unspecified organic parameters was conducted on September 21, 2020 at the three (3) Catskill/Delaware entry points (1S07, 1S03A, and 1S03B), at the Croton High Service entry point (1SCH3) which represented distribution Catskill/Delaware water, and six (6) distribution points. All semi-volatile organic contaminant samples from distribution sites and entry points were below detection limits.

12. Fluoride Monitoring:

Daily analyses of entry point samples (90 samples in total), produced monthly average fluoride levels of 0.73 mg/L for sites 1S03 (Tunnel 1), 1S03A (Tunnel 2), and 1S03B (Tunnel 3). The fluoride levels at the entry points did not exceed the MCL of 2.2 mg/L at any time during the month.

13. Other Monitoring:

Monitoring for Taste and Odor (T&O) compounds were conducted in September on 29 samples from New Croton Reservoir. Results ranged from ND to 9.5 ng/L for Geosmin and from ND to 32 ng/L for 2-Methylisoborneol (MIB). Contract laboratory data reports are included as pdf files enclosed with this report.

Please feel free to contact me at (845) 340-7701 if you would like to discuss any of this information in greater detail.

Sincerely,

Steven C. Schindler
Director, Water Quality

..: Aqueduct Shutdown, CONF: Confluent Growth (+ indicates positive coliform growth), LE: Lab Error, FE: Field Error,
E: estimated count based on non-ideal plate, >=: plate count may be biased low based on heavy growth, >: observed count replaced with
dilution based value

1. Does a raw water turbidity M & R violation exist? Yes X No
2. Does the turbidity reading exceed 5 NTU at any time? Yes X No
If yes, check for MCL violation, and notify state by the end of the next business day.
3. Minimum number of microbiological samples required per week: 5
4. A daily microbiological sample is required every day the raw water turbidity exceeds 1 NTU.
