## DEP Joins Borough President James Oddo and Assemblywoman Nicole Malliotakis to Distribute Approximately 320 Rain Barrels to Staten Island Homeowners

### Rain Barrels Collect Precipitation, Reduce Residential Water Bills and Help to Protect the Health of Borough's Waterways

 Photos from the Event are Available on [DEP's Flickr Page](#)

The New York City Department of Environmental Protection (DEP) on Saturday joined Staten Island Borough President James Oddo and New York State Assemblywoman Nicole Malliotakis to distribute approximately 320 rain barrels to Staten Island homeowners from the borough's Mid-Island neighborhoods. The 60-gallon rain barrels are easy to install and connect directly to a property owner's downspout to capture and store the stormwater that falls on the rooftop. The water collected in the rain barrel can then be used to water lawns and gardens, or for other outdoor chores. Rain barrels can help reduce a homeowner's water bill as watering lawns and gardens can account for up to 40 percent of an average household's water use during the summer months. They also reduce the amount of stormwater that enters the City's sewer system, which helps to protect the health of local waterways. Over the last several years, DEP has distributed more than 5,500 rain barrels to New York City homeowners. Saturday's event was held at Miller Field in New Dorp and the rain barrels were provided free of charge.

"With these free rain barrels, Staten Island homeowners can help conserve water and reduce street flooding while also saving money on their water bills," said **DEP Acting Commissioner Steven Lawitts**. "Additionally, collecting precipitation eases the stress placed on the City's sewer infrastructure during storms and help protect the borough's prized Bluebelts, wetland preservation areas that effectively manage stormwater for approximately one third of Staten Island."

"Using a rain barrel is a simple way to ease street flooding and keep our storm sewers from overflowing when it rains. In addition, rain barrels conserve water for future use and have the added benefit of saving Staten Islanders some money on their water bills. I am happy to partner with DEP on this initiative," said **Borough President James Oddo**.

“DEP’s rain barrel program is a great way to provide some relief for two major issues plaguing Staten Island—storm drainage and the exorbitant cost of water usage. Expanding household water conservation takes pressure off of our overburdened drainage system, while also helping residents save a few bucks on their water bill. As the summer months approach, now is a great time to implement this measure,” said **Assemblywoman Malliotakis**.

DEP’s Rain Barrel Giveaway Program is part of New York City’s Green Infrastructure Plan that aims to capture stormwater before it can ever enter the sewer system and thereby reduce combined sewer overflows into local waterways. DEP has committed to invest \$2.4 billion in green infrastructure projects as well as other source controls, such as rain barrels, to significantly reduce combined sewer overflows by 2030.

The rain barrel program also builds upon DEP’s efforts to conserve water as part of a \$1.5 billion initiative to ensure clean, reliable, and safe drinking water for more than nine million New Yorkers for decades to come. As part of this initiative, DEP has begun a project to repair leaks in the Delaware Aqueduct that supplies roughly half of the city’s daily drinking water. In order to complete these repairs to the Aqueduct, the tunnel must be temporarily shut down in 2022. Ahead of the planned shutdown, DEP aims to reduce citywide water consumption by five percent.

In addition to encouraging homeowners to conserve water, DEP is installing activation buttons on spray showers at 400 playgrounds around the city that will save 1.5 million gallons of water a day during the summer months. Work is also underway to install new, high efficiency fixtures in the bathrooms of 500 City schools to reduce water consumption by nearly 4 million gallons each school day. And, DEP has partnered with hotels, restaurants and hospitals across the city to reduce water use at these facilities by five percent annually.

Installation of rain barrels is easy and they require little maintenance. Each homeowner who received a rain barrel on Saturday was provided with an installation kit and instructions. Rain barrels should only be used for non-potable purposes, such as gardening, and must be disconnected from the downspout during the winter months to avoid freezing.

DEP manages New York City’s water supply, providing more than one billion gallons of water each day to more than nine million residents, including eight million in New York City. The water is delivered from a watershed that extends more than 125 miles from the city, comprising 19 reservoirs and three controlled lakes. Approximately 7,000 miles of water mains, tunnels and aqueducts bring water to homes and businesses throughout the five boroughs, and 7,500 miles of sewer lines and 96 pump stations take wastewater to 14 in-city treatment plants. In addition, DEP has a robust capital program, with nearly \$14 billion in investments planned over the next 10 years that will create up to 3,000 construction-related jobs per year. This capital program is responsible for critical projects like City Water Tunnel No. 3; the Staten Island Bluebelt program, an ecologically sound and cost-effective stormwater management system; the city’s Watershed Protection Program, which protects sensitive lands upstate near the city’s reservoirs in order to maintain their high water quality; and the installation of more than 820,000 Automated Meter Reading devices, which will allow customers to track their daily water use, more easily manage their accounts and be alerted to potential leaks on their properties.
