New York City Emergency Management

FOR IMMEDIATE RELEASE

#35-24

**NYC EMERGENCY MANAGEMENT AND THE DEPARTMENT OF
HEALTH AND MENTAL HYGIENE ADVISE NEW YORKERS TO BEAT
THE HEAT**

*The National Weather Service has issued a Heat Advisory starting 11 A.M. to 8 P.M.
Wednesday, August 28*

*Cooling centers will open across the city. To find locations, including hours of
operation, call 311 or visit the City's **Cool Options Map**.*

*New Yorkers should also take advantage of additional cool options such as
museums, movie theaters, coffee shops, pools, houses of worship, or a neighbor,
friend, or family member's home.*

August 27, 2024 — New York City Emergency Management Department and the New York City Department of Health and Mental Hygiene advise New Yorkers to take precautions as extreme heat is expected tomorrow. The National Weather Service has issued a Heat Advisory for New York City in effect from 11 A.M. to 8 P.M. Wednesday, August 28. According to the National Weather Service heat indices are expected to reach the low 100s. Cooling centers will be open on Wednesday; cooler temperatures are expected the rest of the week.

“Heat indices are expected to reach the lower 100s across the city tomorrow and we urge New Yorkers to take precautions,” said **New York City Emergency Management Commissioner Zach Iscol**. “Heat can be deadly, and it is important for all New Yorkers to take precautions such as staying hydrated, wearing light clothing, and limiting strenuous outdoor activities. Beat the heat by turning on your air conditioner, visiting a cool option, and help us protect the grid by avoiding the use of major appliances during the day.”

The New York City Emergency Management Department and the New York City Department of Health and Mental Hygiene urge New Yorkers to take steps to protect themselves and help others who may be at increased risk from the heat. For more information, including heat-related health tips and warning signs of heat illness, visit [NYC.gov/health](https://nyc.gov/health) or [NYC.gov/beattheheat](https://nyc.gov/beattheheat). In New York City, most heat-related deaths occur after exposure to heat in homes without air conditioners. Air conditioning is the best way to stay safe and healthy when it is hot outside, but some people at risk of heat illness do not have or do not turn on an air conditioner.

To help New Yorkers find relief from the heat, New York City cooling centers will be open throughout the five boroughs. Cooling center locations may have changed from last year. To find a cooling center, including accessible facilities closest to you, call 311 (212-639-9675 for Video Relay Service, or TTY: 212-504-4115) or visit the City's **Cool Options Map**. This year's newly-

revamped map is now available around the clock and allows New Yorkers to easily locate cooling centers, which the City opens during heat emergencies, and cool options, which include free spaces that offer air-conditioned spaces to escape the heat. New Yorkers can now also find cooling centers that welcome pets throughout the five boroughs. As a reminder, service animals are always allowed at cooling centers.

New Yorkers can access a range of outdoor cooling options, including spray showers, drinking fountains, and more. These resources can be found online at **Cool It! NYC**. Many of these resources are located in neighborhoods across New York City. New York City outdoor pools are open 11 A.M.-7 P.M., Olympic and intermediate-sized pools will be open until 8PM on Wednesday, August 28. State Parks, including **Park pool** and **Roberto Clemente State Park** pool are open, call ahead to confirm. While the city's emergency heat plan is activated, an allocation of lifeguards will remain in beach lifeguard stations until 8 P.M. to provide additional resources for responding to emergencies. New Yorkers should only swim between 10 A.M. and 6 P.M. when lifeguards are on duty in their chairs.

During extreme heat, the Department of Social Services (DSS) issues a Code Red Alert. During Code Reds, shelter is available to anyone experiencing homelessness, where those experiencing heat-related discomfort are also able to access a designated cooling area. DSS staff and the agency's not-for-profit contracted outreach teams engage with individuals experiencing homelessness 24/7/365 and redouble their efforts during extreme heat, with a focus on connecting vulnerable New Yorkers experiencing unsheltered homelessness to services and shelter.

ADDITIONAL HEALTH AND SAFETY TIPS DURING EXTREME HEAT

- Those most vulnerable to heat stress include people without air-conditioning who are adults aged 60 and older, and/or have health conditions, including heart disease, diabetes, mental health conditions, or have a cognitive impairment. Check on people who are at-risk and help them find a cool place to stay during heat events.
- Go to an air-conditioned location, even if for a few hours.
- Stay out of the sun and avoid extreme temperature changes.
- Avoid strenuous activity, especially during the sun's peak hours: 11:00 AM to 4:00 PM. If you must do strenuous activity, do it during the coolest part of the day, which is usually in the morning between 4:00 AM and 7:00 AM.
- Remember: drink water, rest, and locate shade if you are working outdoors or if your work is strenuous. Drink water every 15 minutes even if not thirsty (avoid beverages containing alcohol or caffeine), rest in the shade, and watch out for others on outdoor teams. Employers are required to provide water, rest, and shade when work is being done during extreme heat.
- Eat small, frequent meals.
- Wear lightweight, light-colored clothing.
- Participate in activities to keep cool, such as going to the movies, visiting museums, walking in an air-conditioned mall, or swimming at a pool or beach.
- Make sure doors and windows have tight-fitting screens and, in apartments where children live, window guards. Air conditioners in buildings more than six stories must be installed with brackets so they are secured and cannot fall on someone below.
- Never leave a child or pets in the vehicle, even for a few minutes.

KNOW THE WARNING SIGNS OF HEAT ILLNESS

Call 911 immediately if you or someone you know has:

- Hot dry skin
- Trouble breathing
- Rapid heartbeat
- Confusion, disorientation, or dizziness
- Nausea and vomiting
- If you or someone you know feels weak or faint, go to a cool place and drink water. If there is no improvement, call a doctor or 911.

KEEPING YOUR PETS SAFE

- Avoid dehydration: Pets can dehydrate quickly, so give them plenty of fresh, clean water.
- Walk your dog in the morning and evening: When the temperature is very high, do not let your dog linger on hot asphalt. Your pet's body can heat up quickly, and sensitive paw pads can burn.
- Know when your pet is in danger: Symptoms of overheating in pets include excessive panting or difficulty breathing, increased heart and respiratory rate, drooling, mild weakness, unresponsiveness, or even collapse.

IMPROPER FIRE HYDRANT USE

- The improper opening of fire hydrants wastes 1,000 gallons of water per minute, causes

flooding on city streets, and lowers water pressure to dangerous levels, which hamper the ability of the Fire Department to fight fire safely and quickly.

- Use “spray caps” to reduce hydrant output to a safe 25 gallons per minute while still providing relief from the heat. To obtain a spray cap, an adult 18 years or older with proper identification can go to his or her local firehouse and request one.

ENERGY-SAVING TIPS

During periods of intense electrical usage, such as on hot, humid days, it is important to conserve energy as much as possible to avoid brownouts and other electrical disruptions. While diminishing your power usage may seem inconvenient, your cooperation will help to ensure that utility providers are able to provide uninterrupted electrical service to you and your neighbors, particularly those who use electric powered medical equipment or are at risk of heat-related illness and death:

- Set your air conditioner to 78°F or “low.”
- Run appliances such as ovens, washing machines, dryers and dishwashers in the early morning or late at night when it is cooler outside to reduce heat and moisture in your home.
- Close doors to keep cool air in and hot air out when the air conditioner is running.
- Keep shades, blinds, and curtains closed. About 40 percent of unwanted heat comes through windows.
- Turn off air conditioners, lights, and other appliances when not at home, and use a timer or smart technology to turn on your air conditioner about a half-hour before arriving home. Keep air conditioner filters clean.
- If you run a business, keep your door closed while the air conditioner is running.
- Tell your utility provider if you or someone you know depend on medical equipment that requires electricity.
